

Peter Bologna

West Bloomfield, MI, 48323 | (248)202-9704 | peter.e.bologna@gmail.com | [linkedin.com/in/peter-bologna-b3988a222/](https://www.linkedin.com/in/peter-bologna-b3988a222/)

Summary

A certified Cybersecurity professional with a degree that has a strong understanding of threat analysis and remediation. Ready to leverage my expertise in malware research, antivirus tool setup, and threat management to help safeguard critical infrastructure for the continued operation of any system. A dedicated Cybersecurity Major who has a degree and half a year of experience in malware research along with lived experience in data recovery/destruction and malware remediation. I would be a fantastic fit for your SOC analyst position at United Wholesale Mortgage because of my tech skills, location, and willingness to work.

Skills

COMPUTER LANGUAGES: C, C++, HTML, JAVA, JAVASCRIPT, PYTHON, SQL, BASH, ADA, PERL, PROLOG, SMALLTALK, OCAML, HASKELL

OPERATING SYSTEMS: Linux, Windows, Kali

SECURITY: Incident response, malware remediation, risk management, encryption, intrusion-detection, antivirus tools, vulnerability identification, data destruction, backups, pen-tester, Cybersecurity certified.

Education & Certifications

CompTIA A+, CompTIA Secure infrastructure specialist, CompTIA Operations specialist, February 2024

CompTIA Network+, CompTIA Security+, March 2023

Bachelor of Science, Taylor University, August 2021

Projects

- Performed a mock penetration on an online blog site with a login and SQL database during my time at college. SQL injection, cross site scripting, brute force login, and cross site request forgery were some of the issues that had to be resolved
- Performed a mock pen test on Artemis's infrastructure and vulnerability assessment of database servers using five phases: reconnaissance, target identification, vulnerability identification, threat assessment, and report creation.

Experience

SPRINGBOARD CYBERSECURITY TRAINEE – Remote May 2024 – November 2024

- 380+ hours of hands-on course material, with 1:1 industry expert mentor oversight, and completion of an in-depth capstone project.
- Conducted a mock penetration test for a made up company called Artemis where certain vulnerabilities were identified. From SQL injection to cloud storage mis-configurations, in depth reporting along with remediation methods were to be included with the final report. A technical report along with an executive summary was to be provided for the final assignment, highlighting how to report critical information for executive and technical IT staff.

CYBERSECURITY CAREER GAP

- Performed data recovery and data destruction for friends and family on critical and home systems.
- Remediated systems from malware infection for individual clients that needed help. Removed autoitV2, Bloodhound and metasploit completely from their systems.
- Hunted for bugs in critical systems and discovered a zero day DOS attack on a platform that hosts millions of users per day. Discovered this attack by complete accident when messing around with a friend online. Constant curiosity and knack for Cybersecurity lead to the discovery. Reported it to technical staff so they could patch it before the attack becomes public knowledge

TAYLOR UNIVERSITY – Upland, IN

Computer Science research project - Malware Research for Lockheed: *June 2020 – November 2020*

- participated as a senior researcher for Lockheed to investigate Malware for them under an NDA.

TAYLOR UNIVERSITY – Upland, IN

Computer Science Department Capture the Flag Team Member: *April 2018 / February 2020*

- Competed in a multi-university Capture the Flag computer security competition which led to a 3rd place finish. Competed again in February for a first-place finish among just the students here on campus.
- Assisted my team in defending our computer systems against hackers as well as playing the role of an attacker in our competitor's computer systems.
- Gained experience in exploiting file systems to output system passwords, patching known vulnerabilities, locking down permissions, and injecting malicious code into online sites to gain access.

TAYLOR UNIVERSITY – Upland, IN

Computer Science Department Teaching Assistant: *Sept 2018 - May 2019*

- Aid in the Computer Science Laboratory for the Introduction to Computational Problem-Solving class.
- Worked one-on-one with students teaching and assisting them in completing their assignments and projects.

TAYLOR UNIVERSITY – Upland, IN

Computer Science Department Special Project: *Sept 2018 – Jan 2019*

- Worked with two other Taylor University students to design and program the university's first Capture the Flag system to be used for competitions and education in the Cybersecurity Department.
