Experience

Caterpillar / Principal Software Engineer

July 2023 - July 2024

- Lead architectural design and implementation of multi-team business features across all layers of the stack following requirements analysis with necessary stakeholders.
- Established release pipelines, unit testing, linting, monitoring, logging, and vulnerability resolution using appropriate tooling leading to more frequent, higher quality releases and technical debt reduction.
- Drove weekly touchpoints keeping teams aligned on delivery and solution implementation.
- Extensive code review and mentorship to engineers across several teams.

Planet Argon / Software Engineer (Contractor)

March 2022 - July 2023

- Supported multiple clients in feature development, code auditing, monitoring, bug fixes, including general maintenance and support.
- Migrated client server infrastructure across providers with zero downtime or service disruptions.
- Implemented OIDC authentication to support B2B integration.

Red Hat / Principal Software Engineer

November 2011 - March 2022

- Developer of open source software project Katello (on-prem Ruby on Rails) and its large ecosystem including infrastructure and client-based tooling.
- Team lead of four other engineers owning many functional areas of the application.
- Lead developer of Red Hat Subscription Management (SaaS Ruby on Rails)
- Worked across teams to solve performance bottlenecks at API, virtualization, and hardware level.
- Lead development of a multitude of features.
- Maintained 12+ internal and customer-facing applications.

Education

University of North Carolina Wilmington / Bachelor of Science, Computer Science

August 2007 - July 2011
