

APURBA CHOWDHURY

Mansfield, Texas 76063 | (507) 351-6179 | apurbachy@outlook.com | www.linkedin.com/in/apurba-chowdhury-58283a103

SUMMARY

A highly skilled and innovative professional, with five-plus years of software development experience that includes development, deployment, implementation of software applications, and good exposure to the overall Software Development Life Cycle (SDLC). Adept at building applications, using Python and modules such as NumPy, pandas, and pyodbc. Strong expertise in database management, test-driven development, debugging, and process improvement. A self-motivated team player, with excellent problem-solving and communication skills, experienced in Agile methodologies and cross-functional collaboration.

**Software Development | Test-Driven Development | Unit Testing | Acceptance Testing | Database Management
Business Intelligence | Troubleshooting | Process Improvement | Debugging | Communication**

TECHNICAL SKILLS

Languages: Python, JavaScript, PHP, XML, SQL, React JS, UniBasic

SCM Tools: Jenkins, Jira, Confluence, GIT, GitHub, Microsoft Office Suite, Lucidchart, Postman, Dash, AutoSys, MS SharePoint, Azure Storage and Databases, Power BI Dax, Windows Virtual Machines, WSL, PowerShell, Windows Terminal

Operating Systems: Linux, Windows, VMware, TCL

Python Web Frameworks: Django

Database: SQL Server, MySQL and Oracle, Microsoft Management Studio, Multiple UV Databases

Application Servers: Apache Tomcat 5.5, AccuTerm

Development IDE: PyCharm, PyDev Eclipse, Visual Studio, Visual Studio Code, Anaconda, Jupyter, Notepad++, CMD

Methodologies: Agile, Scrum, Waterfall, Azure DevOps, Jira

EXPERIENCE

MOUSER ELECTRONICS, INC., Mansfield, Texas | **Software Developer**, 2023-2025

- Managed project timelines, resources, and deliverables, ensuring the team met deadlines while maintaining quality.
- Collaborated with senior developers to troubleshoot and resolve software issues for quick resolution.
- Designed implementation for an ILI project, which helped to e-invoice orders and parse responses from a third-party API.
- Assisted with integrating the ClearTax API configuration into the UV database and used User-Defined Objects built-in functions to store a response in the UV database.
- Developed unit test specifications, executed QA test cases, and resolved issues, including code review of prototypes for myself and other team members for enhanced maintainability.
- Assisted with developing and maintaining Universe database applications and parsed data, using UniBasic objects, which ensured data integrity and efficient performance.
- Completed ILI project phases one and two for a new Mouser location in Karnataka, India, which brought in 30-plus business customers and \$1.2B-plus in total purchase orders within one year.
- Solved any production issues brought by the support team for the ILI project and tariff project.
- Spearheaded Agile ceremonies, including daily stand-ups, sprint planning, and retrospectives. Improved team productivity by 20% while the team was in self-managed sessions without Scrum master.

TALCOTT RESOLUTION, Windsor, Connecticut | **Python Developer**, 2022-2023

- Developed, tested, and debugged codes for the Numerix Project. Built 11 MC3 scenarios and MarkerData features of TalQL.
- Used Azure DevOps user stories to manage tasks and completed before the sprint deadline.
- Created ten-plus AutoSys jobs for user stories, improving workflow efficiency.
- Utilized Microsoft Visual Studio to test multiple scenarios, increased code efficiency, and reduced the runtime required by code to run by 20%.
- Queried SQL server databases from Python, using a Python-pyodbc connector package to retrieve the necessary information for the company.
- Wrote queries and built data warehouses in SQL Server Management Studio to streamline the process.
- Documented developer and operation team system procedures and functionalities of TalQL system.
- Built Python scripts that analyzed and produced data by requirement from client and automated processes, using AutoSys.
- Leveraged Azure DevOps pipelines, Microsoft SharePoint, and Azure storage and databases, and made releases in development, quality assurance, and in production servers through CI and CD pipelines.

ALLIANCE BERNSTEIN, New York, New York | **Python Developer**, 2021-2022

- Used Jira to assign, track, report, and audit issues. Utilized packages in Python, such as Plotly, Dash, pandas, NumPy, Matplotlib, BeautifulSoup, and PySpark, for insightful analytics.
- Cleaned and processed spending data into maneuverable deliverables within specific formats with Excel macros and Python libraries to enhance data accuracy.
- Performed troubleshooting, fixed, and deployed Python bug fixes for two main applications that were the main source of data for customers and the internal customer service team.
- Wrote Python scripts to parse XML documents to efficiently load structured data into databases.
- Facilitated seamless coordination with the off-shore team in Indonesia and client in New York City to develop an application with the necessary features.
- Cleaned and processed third-party spending data into maneuverable deliverables within specific formats with Excel macros and Python libraries.

SPRING EDUCATION GROUP, West Chester, Pennsylvania | **Software Developer**, 2020-2021

- Documented workflow and reported to upper management on a biweekly basis during meetings on Agile methodology.
- Troubleshot web application and deployed Python bug fixes of two main applications that were the main source of data for customers and the internal customer service team.
- Refactored and extended large existing Django and Python codebase, reducing the number of lines in code and duplication.
- Inserted data into JSON files, using Python, to test Django websites. Additionally, created Python scripts to update content in the database and manipulate files for increased efficiency.
- Implemented task object to interface with data feed framework and invoke database message service setup and update functionality for database performance improvements.
- Gained exposure to AWS services, such as EC2 Instances and S3 bucket for background tasks.
- Developed Spark jobs on Databricks to perform tasks, including data cleansing, data validation, and standardization, and then applied transformations, as per use cases, to meet business goals.
- Utilized and extracted data from database sources, such as Oracle, SQL Server, and DB2. Accessed the Jira tool and other internal issue trackers for project development.
- Developed web applications and RESTful web services and APIs, using Python and Django to update the system functionality.
- Managed data sets, using data frames and MySQL, queried MySQL database queries from Python, using Python MySQL connector MySQL dB package to retrieve information more easily.
- Rewrote existing Python and Django modules to deliver certain formats of data.
- Created script in Python for calling REST APIs for seamless application communication.

PROJECT EXPERIENCE

Management System, 2019. Successfully integrated a console-based application that handled various academic activities of a college. Built a Python project that was used to keep and maintain a complete record of students.

Federated Insurance Dashboard, 2018. Used Python Django framework to create a framework for an application that met local insurance agents' demands and presents correlation of customer needs, using relational databases Oracle SQL and Microsoft Access.

EDUCATION

MINNESOTA STATE UNIVERSITY, Mankato, Minnesota

Bachelor of Science, Computer Information Technology; Minor in Mathematics
