

BRIAN DONALD KOHLER

San Antonio, TX | (323)-982-8907 | brian.kohler0407@gmail.com | <https://www.linkedin.com/in/brian-kohler-9a4007252/>

Experienced Full Stack Engineer with 10+ years in software development, specializing in Python, Django, and Flask. Proficient in designing scalable RESTful APIs, building microservices architectures, managing server configurations, and optimizing database performance. Adept at collaborating with cross-functional teams, stakeholders, and clients to deliver efficient, high-quality solutions. Highly skilled in analytical thinking and problem-solving, with a strong ability to translate complex requirements into modular, maintainable code. Passionate about continuous learning and professional growth, with a proven track record of improving system performance and streamlining development workflows.

PROFESSIONAL EXPERIENCE

TeamHealth

Full Stack Engineer

Feb 2023 - Dec 2024

- Collaborated on the development and maintenance of a healthcare analytics platform serving 50,000+ users, contributing across all phases of the Software Development Life Cycle (SDLC) using Agile methodologies.
- Developed AWS Lambda functions in Python to automate data transformations and analytics across large datasets, improving processing efficiency and scalability.
- Built responsive front-end views and templates using Django and Python, enhancing the user interface for seamless interaction.
- Designed and implemented a CI/CD pipeline that reduced deployment time from 2 hours to just 5 minutes, accelerating release cycles.
- Integrated AWS Neptune with Lambda and DynamoDB to construct real-time data pipelines, enabling live analytics and faster decision-making.
- Authored modular, reusable Terraform scripts to automate infrastructure scaling, optimize costs, and simplify ongoing system maintenance.
- Led the design of alerting and monitoring tools to track network performance, resulting in a 24% reduction in system downtime through proactive response.
- Directed the migration to a Puppet-based configuration management system, increasing deployment consistency and meeting strict project timelines and budgets.

Huma

Back End Developer

Jan 2021 - Jan 2023

- Developed and maintained scalable web applications using Django, ensuring robust backend functionality and smooth user experiences for end-users.
- Integrated Elasticsearch with Django to implement full-text search features, significantly improving data retrieval speed and accuracy.
- Rewrote and optimized Python/Django modules to deliver customized data formats, aligning with evolving product requirements.
- Managed the full Software Development Life Cycle (SDLC), including requirements gathering, system analysis, design, development, testing, and deployment.
- Built and optimized RESTful APIs using Django REST Framework and Elasticsearch, enhancing data delivery efficiency to the front end.
- Diagnosed and resolved complex issues in Elasticsearch related to indexing, mapping, and query performance, ensuring high system reliability.

Avana

Full-Stack Developer

Feb 2018 - Nov 2020

- Designed and integrated relational databases using Flask and SQLAlchemy, enabling efficient data modeling, seamless migrations, and optimized querying.
- Implemented secure user authentication and authorization workflows using JWT tokens and OAuth protocols, enhancing access control and user data protection.
- Automated auditing processes and generated Excel-based reports through Python scripting, supporting logistics, sales, and inventory operations.
- Developed and deployed RESTful APIs using Flask, and created data ingestion pipelines to extract, merge, and load data into MySQL databases.
- Built a scalable information management system using Flask's REST framework, streamlining backend operations and system integration.
- Deployed applications to AWS and Heroku environments, leveraging Docker for containerization to improve deployment efficiency and scalability.

Ancestry

Backend Developer

Jan 2017 - Jan 2018

- Conducted in-depth research on Python programming efficiency and best practices, contributing to optimization strategies for backend services.
- Collaborated with Product Management and UX teams to define product scope, timelines, and functional requirements, aligning technical solutions with user needs.
- Utilized Python to manage backend traffic and handle server hits across Django, Redis, and integrated applications, ensuring consistent performance and scalability.

AMC Networks

Full Stack Developer

Feb 2014 - Dec 2016

- Designed and implemented RESTful APIs to ensure smooth data communication and integration across distributed components of web applications.
- Configured Nginx for efficient server hosting, including daemon setup and process management to support scalable deployment environments.
- Developed and maintained microservices architecture, enabling modular development and independent scaling of services for better system flexibility.
- Contributed to CI/CD pipelines by automating testing and deployment workflows, enhancing delivery speed and ensuring reliable software releases.

TECHNICAL SKILLS

- **Programming Languages:** Python, Javascript/Typescript, Ruby
- **Cloud Native CI/CD Workflows and Tools:** Jenkins, Travis, Heroku, GitHub, GitLab, Bitbucket
- **Cloud Platforms:** AWS, GCP, Azure
- **Database Technologies:** PostgreSQL, MySQL, MongoDB, Oracle, SQL, NoSQL
- **Others:** Docker, Kubernetes, Terraform

EDUCATION

- **Engineering University**
Bachelor of Design in Process Engineering
May 2014 - May 2016
- **University of Engineering UX Cohort**
Industrial Basics and General Application
Aug 2016 - Oct 2019
- **Baylor University**
Bachelor in Computer Science
2009 - 2013
