

Professional Summary

Results-driven .NET Developer with 10+ years of experience designing, developing, and maintaining scalable web applications. Expertise in **ASP.NET Core, MVC, Web API, C#, JavaScript and SQL Server**, with hands-on knowledge of modern frontend frameworks like **ReactJS**. Proven track record of improving application performance and integrating complex systems within Agile environments. Skilled in database optimization, automation, and ensuring high-quality deliverables through thorough testing.

Technical Skills

- **Languages:** C#, JavaScript (ES6), SQL
- **Frameworks:** ASP.NET Core, ASP.NET MVC, WEB API, ReactJS, Entity Framework
- **Tools:** Visual Studio, Git, Postman, Swagger, JIRA, TFS
- **Databases:** SQL Server, Oracle, MySQL
- **Testing:** NUnit, Selenium
- **Methodologies:** Agile (Scrum), Test-Driven Development

Professional Experience

.NET Developer

Vocus Group Limited (Dodo), Melbourne, Australia

March 2014 – Present (currently on leave looking for opportunities in the US)

- Developed a web service in C# .NET to parse usage data provided by third party vendors in plain text file of about 100k customers and importing the data into MS SQL server thus **creating more than 5TB data** in database.
- Increased the **positive customer ratings by more than 20%** by collaborating with UI/UX designers to translate design mockups into functional user-friendly, responsive websites using HTML, JavaScript
- Automated pricing uploads of energy products in C# ASP.NET MVC, WEB API and SQL. This **eliminated manual effort of 2 weeks to 5 minutes and reduced manual errors** significantly.
- Successfully **lead 5 major releases** which had companywide impact involving end to end phases of software lifecycle which included translating product requirements into technical solutions, collaborating with various stakeholders, business analysts, working with team on detailed design, foreseeing risks through quick prototypes, coding, testing and production deployment.
- Logged, managed, and retested defects using JIRA, maintaining clear communication with development teams and project stakeholders to resolve issues efficiently.
- Provided technical guidance and mentorship to junior team members, fostering a collaborative and knowledge-sharing environment.
- Developed custom SQL queries to generate operational reports, **improving business insights for stakeholders**.
- Participated in code reviews and peer programming to maintain high-quality standards.
- Maintained a **billing system** serving over 150,000 active customers.
- Refactored an **ASP.NET** application to support dynamic pricing models and integrated third-party payment APIs.
- Enhanced system performance by optimizing database queries and caching, reducing response times by **40%**.
- Implemented **ReactJS** components as part of personal project.
- Designed and deployed **RESTful APIs** to integrate with internal and external systems, adhering to best practices and security standards.
- Collaborated with cross-functional teams in an Agile setting, delivering on-time releases for critical business functions.

Technology Analyst
Infosys Technologies Ltd, Mysore, India
Sep 2008 - Jan 2013
(Clients – Allstate, Verizon)

- Developed Data Point Management Tool .NET web application used internally. DP Management tool is used to get the status of any account or address of customers in any environment. The application supports storing valid account and address details into the database & maintenance of the same with reporting feature based on different search options. This resulted in **reducing the average time spent on support tickets by 50%**.
- Automated manual data updates to production databases in C# using SQL and stored procedures, **eliminating manual effort of 2 hours for every incident resolution**.
- Automated workflow distributor product in .NET framework which involved monitoring, triggering alerts, which resulted in identifying, and **resolving production issues** well before being noticed by customer.

Key Projects:

- **Customer Usage Analytics Dashboard:** Designed and implemented a data visualization tool using **Angular** and **Google Charts within .NET application**, allowing customers to view detailed energy usage patterns.
 - Optimized data parsing and implemented **range-based database sharding** for high-volume datasets, reducing query time by **80%**.
 - Enhanced graph functionality to provide users with options to select variations based on rates and kilowatts, improving user interface, **leading to a 25% increase in user satisfaction scores**.
 - Conducted functional, integration, and regression testing for mobile applications across multiple platforms, ensuring compliance with business requirements and user expectations.
- **Billing:** Enhanced and refactored C# Web API codebase to accommodate new billing requirements:
 - Integrated dynamic pricing models and pay-on-time discounts based on customer billing plans.
 - Streamlined backend and frontend layers, improving scalability and maintainability.
 - Ensured seamless integration through collaboration with cross-functional teams and rigorous testing.
 - Delivered a reliable billing system, validated with comprehensive test cases and Agile processes.
- **Collateral Designs:** Designed and implemented dynamic letter templates in **C# .NET** for customer communication, comprising approximately 15 distinct letters, utilizing **XSLT**.
 - Integrated templates into a service to convert them to **PDF format**, ensuring compatibility across platforms and devices.
 - Automated the delivery process with a queuing system, enabling seamless distribution of emails and physical letters.
 - Collaborated with stakeholders to refine templates and optimize the delivery workflow.
 - Conducted testing and troubleshooting to ensure reliability and accuracy.

Education:

Bachelor's in Electrical and Electronics Engineering, Sri Jayachamarajendra College of Engg., Mysore, India

Achievements

Received Star Award at Infosys Technologies for going beyond and above expectations.
