

Jahnavi was able to pick up unfamiliar technology very quickly and become an asset to the client team. She is self-motivated and was able to ambiguous client requirements and produce working functionality.

– Glen Stroup, Practice Manager, Lochbridge

Career objective

Dynamic FullStack Software Engineer with a proven track record of developing innovative solutions; seeking an IT position to leverage over 10 years of experience in team-oriented application development. Committed to advancing technical skills while contributing to organizational success.

Technical Skills and Tools

- C#.NET, C++, PHP, Scheme, RESTful APIs
 - MySQL, PL SQL, T SQL, SQL Server, Oracle 10g, Redis Cache, Firestore database
 - Agile, UML diagrams, Use Case diagrams, Sequence Diagrams, Activity flow and activity diagrams.
 - Team Foundation Server, Tortoise SVN, Git, Github, Electric Commander.
 - MySQL workbench, Toad, SQL Server Management Studio, Firebase.
 - MS Office Suite, MS Visio.
 - ASP.NET, HTML, CSS, JavaScript, JQuery, Angular Js, Angular, Reactjs, Angular Universal, Redux, Typescript, JQWidgets, Twitter Bootstrap, webpack, babel.
 - Google cloud app engine, Google cloud run, AWS Certified foundational Cloud Practitioner
 - WordPress, AJAX, XML, API integration, Dreamweaver, Postman.
 - XAMPP, Visual Studio, Visual Studio Code, IIS, node js, MEAN.
 - Zeplin, figma, Lucid Chart, Canva.
-

Accomplishments

- Co-chaired the Intuit Indian Network at San Diego ERG, recognized for exceptional leadership in 2023.
 - Contributed to the San Diego Voters Voice Application for Code for America, utilizing Angular and Python.
 - Won 1st prize, USC Supply Chain Hackathon 2018; developed inventory management solution using Angular and Google Maps.
 - Won 3rd prize, Zoo Hackathon 2018; created an application using Angular, Google Maps, and Python data.
-

Professional Experience

FullStack Software Engineer
Intuit Inc.
San Diego

January 2023 - September 2024

- Developed front end widgets, libraries and components in react js.
- Created a proof of concept for micro front-end architecture and dynamic loading of JavaScript at runtime using webpack module federation feature, utilized AWS S3 bucket for storing components.
- Removed dependency of lodash in the internal projects by creating an internal library of functions such as debounce, curry, partial, isObject.
- Created content management system components in a project using react schema json forms. Improved code coverage by adding more unit tests.
- Managed on-call responsibilities encompassing support, bug fixes, Splunk monitoring, and JIRA story creation for troubleshooting and led application deployment.
- Recognized during TurboTax peak week for addressing accessibility issues on the Super Bowl landing page,

receiving numerous accolades for demonstrating company values.

- Improved code coverage in a repository by identifying and addressing areas lacking unit test coverage.
 - Developed front-end elements for A/B testing scenarios, aiding the analytics team in pivotal decision-making for feature implementation.
 - Participated in a 7-day hackathon during Global Engineering Days, developing the front-end for a community echo AI application using React.js.
 - Enhanced existing beaconing payload for enabling automated testing.
 - Implemented end-to-end testing using Cypress for specific application pages like microsites.
 - Focused on enhancing and testing an orchestrator responsible for rendering product upsells and upgrades to consumers.
 - Worked with nextJS server components and client components . Optimized application rendering by implementing lazy loading for components.
-

Full Stack Software Engineer

Mitchell International.

San Diego, CA

May 2018 - January 2023

- Led profile lookup overhaul feature by implementing export import of excel data by developing components in the front end monorepo using reactjs, redux and creating a dedicated C# project to convert uploaded data into excel utilizing the factory pattern. Refactored legacy code for improved maintainability and bug reduction.
 - Mentored 2019 summer intern, providing guidance and solutions.
 - Enhanced users profile search feature, by adding new REST API endpoints in the back end and optimizing with LINQ queries along with unit tests and integration tests in C#. Conducted JMeter load testing and converted LINQ queries to SQL for testing.
 - Implemented a feature in the APD application using C#.NET, enabling users to transmit information to a third party through a banner in the estimating solution. It involved requirements gathering, implementation and collaboration with project stakeholders.
 - Developed an AngularJS tooltip component independent of Angular Material due to rendering issues in IE.
 - Refactored a key route in the Estimating Application API using the builder pattern in C#, enhancing code structure with unit and integration tests.
 - Created REST API endpoints in C# .NET Core to support application functionality.
 - Resolved bugs and implemented features using TypeScript for AngularJS, including writing front-end Protractor tests.
 - Developed SQL scripts for production environment tasks.
 - Actively participated in code reviews, sprint planning, and deployment activities.
 - Resolved issue in figuring out issues with printing pdf which turned out to be a cultural issue A4 vs Letter paper setting saving the company from potential legal issues from insurance industry clients.
-

Associate Developer

Urban Science Applications.

Detroit, MI

March 2015 - May 2018

- Created Admin Screens using AngularJS, Html, CSS, jqWidgets in frontend and C#.net, LINQ, SQL queries on the backend.
- Converted a console application for Excel data loading into a web application by modification of existing C# code, creation of sequence diagram and flow diagram, and creation of front end UI components using AngularJS, html, CSS.
- Developed Client side code in Angular-2 for an internal admin page employing Material design components for UI rendering.
- Contributed to the development of a contact manager application for Jaguar and Land Rover by utilizing ASP .net MVC, AngularJS, jqWidgets, typescript, Html.

- Participated in planning meetings, estimations, and project demonstrations at the end of each iteration cycle.
 - Enhanced the S4 application by resolving QA-assigned bugs writing unit tests, sql queries and LINQ queries
 - Led deployment sessions for pre-production and production environments.
 - Migrated Bing Maps from Silverlight to JavaScript for improved compatibility and performance.
 - Collaborated in the KBD team during the 2016 hackathon to develop an iOS application promoting effective decision-making for field managers.
 - Developed a globally accepted KPI Selector for the Contact Manager Application within the S4 team, implementing GUI and non-GUI string localization using C#.NET, Jqgrid, and HTML.
 - Worked on ASP.Net MVC pages using razor, wrote rest api endpoints for S4 Solution team.
-

Programmer Analyst

Lochbridge.

Detroit, MI

September 2013 - March 2015

- Supported Shore Mortgage's Operations and Application Support teams pre-and post-IT reorganization.
 - Developed Scheme programs for Destiny, an in-house loan origination system by Integra.
 - Contributed to multiple SVN code pushes and troubleshooted issues in Scheme, C#, HTML, and PHP applications.
 - Acquired extensive experience in user support, troubleshooting, and custom program development based on business analyst requirements.
 - Consulted for Blue Cross Blue Shield of Michigan, specializing in Excel data triaging and PL SQL query writing.
 - Gained insight into mortgage processes including underwriting and closing procedures.
-

Graduate assistant.

Office of Institutional Research and Information Management.

EMU-Ypsilanti MI

January 2011 - April 2013.

- Managed projects, performed systems analysis, designed databases, and developed web applications using PHP, HTML, CSS, jQuery, JavaScript, Bootstrap, and SQL.
 - Conducted requirement gathering from clients, including departmental heads and strategy leads, and designed applications accordingly.
 - Developed a GIS maps gallery for the Office of Institutional Research and Information Management using HTML, CSS, Dojo, PHP, and AJAX under Dr. Donald Lund's guidance.
 - Created web applications for NSSE (National Survey for Student Engagement) and Graduating Senior Survey using Ajax, PHP, MySQL, and jQuery.
 - Designed and developed the **Department Glossary for IRIM at EMU** developed using PHP, flash, HTML, CSS, JavaScript and jQuery. <http://irim.emich.edu/glossary/>
 - Supported senior analysts by fulfilling data requests, conducting research, and updating web applications, under the guidance of Dr. Sinji Yang. Ref: - Dr Sinji Yang (syang3@emich.edu)(sinjiya@umich.edu), (734) 487-8834.
-

Education

- **Master of Science Information Systems, April-2013**(CGPA 3.55/4.00)
Eastern Michigan University-Ypsilanti, MI, USA
 - **Bachelor of Business Administration Computer Information Systems, Dec 2010** CGPA 3.2/4.0
Eastern Michigan University-Ypsilanti, MI, USA.
