

EDUCATION

The University of Texas at Austin	Bachelor's of Science in Electrical and Computer Engineering Minor: Business Overall GPA: 3.5/4.0 Graduation: May 2024	August 2020 – May 2024
--	---	-------------------------------

Notable Projects/Coursework

Multicore Computing (ECE 361C)

- Covered a wide range of topics including concurrent languages and synchronization techniques, parallel algorithms, concurrent data structures, and CUDA for GPU-based parallel computing.
- Explored shift towards multicore systems in computing, focusing on the challenges and techniques of programming multicore software systems with a foundation in programming, data structures, operating systems, computer architecture, and algorithms.

Software Architecture (ECE 361M)

- Studied the critical role of system architectures in software development, including the exploration of various architectural types, their purposes, and the methodologies for creating, specifying, and communicating these architectures effectively.
- Gained hands-on experience with CI/CD pipelines, unit testing, release control, and lifecycle management through projects utilizing GitLab.
- Engaged with both theoretical and practical approaches in architectural models, learned how to assess the quality of software architectures and understand their impact on system design and functionality.

University Research Project – AI Fitness App (ECE 464K)

- Employed IntelliJ IDEA for local testing and debugging, with comprehensive API request/response testing. Established an integration test suite, set up to periodically verify the integration.
- Achieved a 15% improvement in user health metrics over a 6-month period by providing tailored fitness programs.
- Chose MongoDB for its dynamic schema, facilitating the efficient handling of large volumes of user data.
- Utilized React for dynamic front-end development across Android and iOS platforms.
- Developed a machine learning-powered fitness app, leveraging Convolutional Neural Networks (CNNs) to deliver personalized training programs and dietary plans based on user profiles.

EXPERIENCE

Sellpoint – *Frontend Software Engineer* | Seoul, South Korea **April 2024 - Present**

- Developed user-friendly interfaces for Sellpoint, a startup dedicated to delivering enterprise resource planning solutions tailored for small to medium enterprises in South Korea, with ongoing plans to expand across Asia and the United States.
- Enhanced usability and overall experience by collaborating with backend engineers to integrate AI features, such as predictive analytics and automated reporting.
- Implemented data fetching and management techniques using Python and DynamoDB and conducted comprehensive testing frameworks to ensure software reliability and performance.
- Optimized the integration of customer directories, orders, invoicing, and payments functionalities through an innovative ERP linking system.
- Assisted in the migration of server instances to AWS, ensuring robust infrastructure and scalability.

Cornel Realty – *Intern* | Las Vegas, NV **May 2022 – August 2023**

- Project Nightlight
 - Developed a website using HTML for a home renovation service, resulting in 32% increase in user interactions.
 - Engineered an automatic interactive conversation feature for enhanced customer engagement, seamlessly integrated into the site.
 - Employed AWS and Azure for the deployment of microservices-based applications, achieving pagination, lazy load, and cold start.
 - Utilized React and Node.js for the front end, with a back-end controller using Python Flask. For database management, employed DynamoDB, incorporating database performance improvement algorithms to ensure scalability and efficiency.
- Project Toasty
 - Effectively oversaw financial operations in preparation for the grand opening of a new boba shop in Las Vegas.
 - Drove successful online marketing campaigns across multiple social media channels, including Instagram and TikTok, resulting in a significant boost in media engagement and online visibility.

LEADERSHIP, ORGANIZATIONS, AND SERVICE

Institution of Electrical and Electronics Engineers (IEEE) – *Officer* | Austin, TX **September 2020 – May 2024**

- Conducted research integration of machine learning algorithms with advanced semiconductors to optimize manufacturing and production for various industries.
- Organized discussions with leading tech companies like Samsung, Texas Instruments, and Optiver, reinforcing Austin's tech industry presence.

Student Engineering Council (SEC) – *Officer* | Austin, TX **September 2022 – May 2024**

- Facilitated collaborations and among engineering student organizations through software projects, workshops, and events.
- Curated networking and skill-building sessions, connecting students with industry professionals.

King Buffet – *Assistant Manager* | Plano, TX **September 2021 – May 2024**

- Enhanced operational efficiency and customer satisfaction by proactively engaging with customers, effectively addressing their concerns, and exceeding their expectations.
- Drove a 22% surge in daily customer volume through targeted promotional campaigns and engagement with customers on social media and rating platforms.
- Exhibited strong leadership and people management skills by mentoring staffs, fostering a positive and dynamic work environment, and leading by example to encourage teamwork and excellence in service.

ADDITIONAL INFORMATION

Computer Skills: C, C++, Java, HTML, Python, Python Flask, MySQL, DynamoDB, Assembly Language, React, Node.js

Languages: English (Native), Chinese (Fluent), Spanish (Proficient)

Work Eligibility: Eligible to work in the U.S. with no restrictions.
