OBJECTIVE: Aspiring Computer Engineering graduate with a background in customer service, project management, and adept problem-solving. Eager to contribute programming expertise to a dynamic software/web development role. Seeking an internship or full-time position to apply skills and drive innovation in the field of computer engineering.

EDUCATION: Florida International University, Miami, Florida
Bachelor of Science in Computer Engineering

Graduation date: July 2023
GPA: 3.7/4.0

RELEVANT COURSES:

- Signals and Systems
- Digital Logic Design
- Programming I & II
- Programming Embedded Systems
- IoT/Sensor Data Analytics
- Circuits Analysis and Lab
- IoT Python Programming
- C Programming for Embedded Systems
- Computer Design

TECHNICAL SKILLS:

- Python
- Java
- MS Word, Excel, PowerPoint
- HTML, CSS
- C Programming
- Visual Studio Code, Eclipse

PROJECT WORK:

Engineering Project (Python).

Software Designer – Project Leader

Spring-Summer Term 2023

- Directed a project using Python programming and agent-based methods to create a user interface facilitating visual comparison of simulated stock market behaviors with real market trends, enhancing investment decision insights.
- Designed and oversaw the implementation of the interface's graphing system using Python, enabling seamless visualization of simulated outcomes and real market data.
- Devised and executed Python-based logic, incorporating agent-based methods, for comparing simulated predictions to historical data, offering valuable insights into simulation reliability and project success.

Engineering Project (Python)

Data Analysis – Project Lead Designer

Summer Term 2022

- Led the analysis and transformation of an extensive weather dataset utilizing Python and Apache Spark within Jupyter Notebook. Directed comprehensive data cleaning, column dropping, and temporal segmentation to optimize the dataset for detailed analysis.
- Demonstrated adeptness in utilizing advanced tools such as Jupyter Notebook and Apache Spark, effectively leveraging their functionalities to manipulate, visualize, and analyze intricate datasets. Employed PySpark to seamlessly connect Python with Apache Spark, enabling streamlined data processing.

EXPERIENCE:

Global Miami Joint Venture (Full-Time)

IT Department/System Administrator

October 2023 – Present

- Lead and execute end-to-end technical support for 25 restaurants, overseeing both hardware and software systems, resulting in a consistently high level of operational efficiency.
- Proactively troubleshoot and resolve issues related to POS systems, printers, credit card readers, KDS, TVs, handheld devices, and other technologies, ensuring minimal downtime and maximum productivity for restaurant managers.
- Engage in effective communication with software companies to troubleshoot and resolve complex technical issues, demonstrating a proactive approach to problem-solving and fostering strong vendor relationships.
- Oversee network performance and maintenance, monitoring switches, routers, and devices to guarantee a stable and secure technological infrastructure.
- Play a key role in maintaining data integrity and security by creating and maintaining servers, controlling DHCP, reserving IPs, and managing user accounts in Active Directory.

Advanced Network Support (Internship)

IT Department

Summer 2022

- Assisted in maintaining and upgrading computer systems, including installing, configuring, and updating hardware and software components to enhance system performance.
- Supported the network infrastructure by troubleshooting connectivity issues, assisting in network configuration, and contributing to network maintenance tasks.
- Maintained accurate records of IT assets, software licenses, and user accounts. Assisted in documenting IT procedures and guidelines for future reference.

NON-TECHNICAL SKILLS:

- Conversational Spanish and English
