EXPERIENCE

Senior AI Full-Stack Engineer 06/2023 - 03/2025

Sailes

- Architected and developed **AI-driven applications**, integrating **OpenAI API**, and **custom LLMs** to enhance automation and improve **email response rate by 40%** with hyper-personalized content.
- Developed an **OpenAI-powered SMS assistant**, utilizing **NLP to extract action verbs from messages** and execute corresponding backend API operations, streamlining user interactions.
- Designed and implemented full-stack **microservices architecture**, leveraging **NestJS, PostgreSQL, Redis, and GraphQL with Hasura**, improving API response times by 50%.
- Led the migration from Next.js v14 to v15**, ensuring compatibility with the latest features, improving rendering efficiency, and optimizing development workflows.
- Optimized frontend performance** by implementing **lazy loading and dynamic imports**, reducing initial page load times and improving user experience.
- Used **AWS Lambda** to generate CSV reports for dashboard statistics, improving performance and reducing data processing times by 60%.
- Enhanced database performance** by implementing **read replica instances in PostgreSQL**, reducing query latency and balancing system load.
- Migrated authentication services from **AWS Cognito to Auth0**, ensuring a smoother user experience and successfully passing **SOC2 compliance audits** for security and data protection.
- Developed the **SaileBot Intelligence Score**, a custom AI-driven evaluation system to measure and improve the performance of SaileBot, increasing automation efficiency by 35%.

Senior Full-Stack Engineer 02/2020 - 06/2023

Fracta

- Developed and optimized full-stack solutions for Fracta's water-pipeline assessment platform, leveraging **Vue.js, Nuxt.js, Python, and Django** to enhance data visualization and backend processing.
- Integrated **Mapbox** to display geospatial visualizations of pipeline assessment results, improving the accuracy and usability of infrastructure monitoring.
- Implemented an **asynchronous request strategy** between the backend API server and ML engine using **AWS RabbitMQ and Celery**, ensuring efficient job execution and reducing processing delays.
- Worked with data engineers to implement **micro-services architecture** to **dynamically** add new instances of ML engineers with **AWS Load Balancer**.
- Utilized **PostGIS (PostgreSQL extension)** to store and query geospatial data, enabling efficient spatial analysis and mapping of pipeline infrastructure.
- Enhanced **monitoring and logging** using **AWS CloudWatch** and **Prometheus**, ensuring real-time issue detection and system observability.

Senior Frontend Developer 05/2017 - 01/2020

SunPower

- Migrated the solar panel design system from 2D to 3D, enhancing visual realism and usability, leading to a **20% increase** in customer conversions.
- Developed and optimized the frontend for SunPower's **solar energy monitoring platform**, leveraging **React and Redux** to create interactive, real-time dashboards for tracking energy production and system efficiency.
- Implemented a geospatial solar panel placement algorithm using **PostGIS and Google Maps API**, optimizing **solar efficiency by 25%** and reducing installation errors.
- Optimized API performance** by redesigning key endpoints in **Node.js**, reducing latency and improving data retrieval efficiency for solar system reports.
- Automated **CI/CD workflows** using **Jenkins and Docker**, decreasing **deployment times by 50%** and ensuring **consistent, error-free releases**.

Software Engineer 10/2013 - 05/2017

Yellow

- Developed and optimized high-performance web applications for **Yellow's logistics and supply chain platform**, improving freight tracking and shipment management.
- Built and optimized **RESTful APIs in Node.js and Express**, reducing response times and improving data retrieval efficiency by 35%.
- Developed **real-time shipment tracking** using **WebSockets**, allowing customers and fleet managers to monitor freight movement dynamically, enhancing delivery accuracy and customer experience.
- Designed and optimized **MongoDB schemas**, improving database performance and query efficiency.
- Introduced **server-side rendering (SSR) with Angular Universal**, significantly enhancing SEO rankings and page load performance.

SUMMARY

I am a Senior Full-Stack Engineer with **over 12 years of experience** in building scalable web applications and cloud solutions. I specialize in **React, Angular, Vue.js, Node.js, Python, Django, and PostgreSQL**, with expertise in **AWS, Kubernetes, Terraform**, and CI/CD automation.

I have led **microservices migrations, real-time data processing (RabbitMQ, GraphQL)**, and geospatial data visualization (**Mapbox, PostGIS**). **SOC2-compliant authentication (Auth0, AWS Cognito)** and thrive in fast-paced, collaborative environments, driving technical innovation and system optimization.

SKILLS

Front-end Development

React · Angular · Vue.js · Next.js · Nuxt.js ·
Typescript · Javascript · Redux · Zustand ·
RxJS · NgRx · Tailwind CSS · Material UI ·
WebSockets · WebRTC · Vite

Backend Development

Node.js · Python · C# · Express.js · NestJS ·
Django · .NET Core · GraphQL · REST API ·
Hasura · gRPC · RabbitMQ · Kafka · Redis

AI & Machine Learning

OpenAI API · LangChain · TensorFlow ·
PyTorch · AWS SageMaker ·
Google Vertex AI · NLP · LLM Fine-Tuning

Cloud & DevOps

AWS · GCP · Azure · Docker · Kubernetes ·
Terraform · Jenkins · Github Actions

Databases

PostgreSQL · MySQL · MongoDB · Firebase ·
DynamoDB · BigQuery

Tools & Methodologies

Git · GitHub · GitLab · Bitbucket · Agile ·
Scrum · Jira · Confluence

EDUCATION

Bachelor's degree

University of Utah
2009 - 2013
