

Tanzeem Ahamad - Mobile Apps Lead/Architect

+1 (469) 647-1976

tanzeem1812@gmail.com / www.linkedin.com/in/tanzeem-ahamad

SUMMARY

- Passionate about architecting and delivering cross platform, customer focused Mobile applications.
- Extensive 18 years of experience in leading and mentoring **iOS/Android** mobile apps development teams.
- Architecting / Leading and delivering enterprise and consumer facing Mobility Solutions on iOS using **React Native**, Objective C, Swift, SwiftUI and Combine meeting high standards of security, performance, and reliability.
- Very focused techie, contributing all around to successfully implement customer's vision, value, and mission to ensure their success while maintaining high ethical standards. Love to help team by guiding with new and latest tools and techniques.
- Expertise in Object Oriented Programming, SOLID design principles and design Patterns (MVVM, MVVM-C, VIPER, MVP, MVC), Protocol Oriented Programming (POP), Swift Concurrency and synchronization, industry standard best practices.
- Collaborating with leadership and stakeholders (PM, QA, UX.) for defining the direction and overall strategy of the product.
- Cultivating high-quality engineering **culture** by implementing Test Driven Development using CI/CD pipeline.
- Leveraging Agile/SCRUM for timely execution of product and feature roadmap.
- Encourage open communication, creative thinking, and cohesive team effort with the help of continuous learning and development.

SKILLS

- **Planning & Reporting** : Tasks/ Features/Issues Management, Bug Tracking (JIRA, Azure DevOps).
- **Languages** : React Native, Swift, Objective-C, Kotlin, Java, JavaScript,, C#, C/C++, VC++, MFC, Win32.
- **Operating Systems** : iOS, Android, Windows Mobile, Linux, MacOS, Windows
- **Frameworks** : **SwiftUI**, CocoaPods, CocoaTouch, Alamofire, AVFoundation, CloudKit, MapKit, Google Analytics, Grand Central Dispatch, Core Location, Mapkit, Combine, UIKit, Foundation, Core Data, Combine, XCTest, JUnit.
- **Persistence Storage**: SQLite, Core Data, KeyChain, Users Default, Realm, Room.
- **Performance Tools** : XCode Profiling, XCode Memory Graph.
- **IDEs** : XCode, Android StudioVS Code, Xamarin Studio, Eclipse, Visual Studio, SQLite, Git,, Visio, SQL Server, MS Project.
- **Security** : Symmetric(AES) and Asymmetric(RSA) Encryptions, SSL Pinning, Code Obfuscation.
- **Others** : Data Structures, Algorithms, XML, UML, SQL, TDD, RESTful web services, Crashlytics, Jenkins, JIRA, Azure DevOps, Git, Google Analytics, Firebase, **Crashlytics**, and 3rdParty SDKS, Charles.

EDUCATION

- Masters in Computer Application from IGNOU, New Delhi (2004)
- Bachelors in Computer Application from IGNOU, New Delhi (2002)

PROJECT DETAILS

Amazech Solutions (June, 2022 - Present) - Sr. Mobile Applications Architect

Project : FiServ Mobile App (iOS/Android), (Apr, 2023 – Present)

Client : FiServ, Alpharetta, GA,USA (Implementation partner – Photon Infotech)

Leading the Mobile app and products vision, strategy, roadmap and delivery of **FiServ** Mobile App. Architected the design of the app using MVVM, **React Native**, Swift, SwiftUI, Protocol Oriented Programming (POP), Swift Concurrency.

Responsibilities & Achievements:

- Improved app performance by solving multiple memory leaks and using appropriate threading approach (main queue/global queue). Avoided calling of timers and introduced the timestamping approach. Introduced safeguards around the code therefore avoided the crash. Introduced caching of the data with light stale data API check.
- Implemented reusable component and reduced 30% of the code by removing duplicacy of the code which also reduced number of duplicate bugs.
- Avoiding tight coupling of the code and introduced dependency injection using **Factory** framework.
- Introduced segregation of the layers to improve bug fixing time and maintenance of the code.
- Mentoring team and providing the guidance to analyze the problem and providing the best solutions.
- Interaction with stakeholders to update the current progress.

Technologies: iOS, XCode, Swift, SwiftUI, iPhone, iPad, Kotlin, Java, Charles, Postman

Project : McDonald's Mobile App (iOS/Android), (May,2022 – Mar-2023)

Client : Capgemini, Chicago, Illinois, USA

Own and lead the Mobile app and products vision, strategy, roadmap and delivery of McDonald's Mobile App. Successfully re-architected the ID@COD/Loyalty/Accounts/Order modules using MVVM, Swift, Swift UI, Protocol Oriented Programming (POP), Swift Concurrency.

Responsibilities :

- Successfully designed and re-architected ID@COD module using MVVM design pattern.
- Educated the team on usage of Design patterns and best coding practices
- Improved app performance by solving multiple memory leaks and by using appropriate threading approach(main queue/global queue).
- Implemented reusable component and reduced 30% of the code by removing duplicacy of the code which also reduced number of duplicate bugs.
- Designed application Architecture and suggesting the best approaches.
- Introduced segregation of the layers to improve bug fixing time and maintenance of the code.
- Monitored the app crashes on Crashlytics and Firebase and fixing them on time. Putting safe guards around the code to avoid the crash.
- Worked with team on a day-to-day basis to analyze the problem and providing the solutions
- Interacted with stakeholders to update the current progress.
- Analyzed the backlog with Product Owner for future releases.
- Identified the tech debt items to release in current and upcoming releases.

Technologies: iOS, XCode, Swift, Swift UI, , iPhone, iPad, Kotlin, Java, Charles, Postman

Sokowatch Pvt Ltd (Feb 2022 – May 2022) - Technical Engineering Manager - Mobile

Own and lead the Mobile app's vision, strategy, roadmap and delivery of Wasoko mobile app in Android. It's a delivery agent app for FMCP for informal retailers across Africa.

Responsibilities:

- Project Planning, tracking of team's progress, planning of team's career growth and taking corrective actions.
- Built and managed a team of 6 engineers and was responsible of mentoring them, 1:1, conducted performance reviews facilitating trainings for the team.
- Applying Best practices, application Architecture and code review
- Creating HLD, LLD and POCs of custom components for Android app.

Technologies - Android, Kotlin, Java

Conduent Business Services (Aug 2019 – Jan 2022) - Sr. Mobile Apps Technical Manager

Own and lead the Mobile apps and products vision, strategy, roadmap and delivery of multiple mobile products (Electronic Child Care, ConnectEBT, Way2Go and ExpertPay, Life@Work, Benefit Wallet, SafeCourier, Augmented Reality Parking). Delivered all mobile applications to the Conduent's USA based client in NJ, GA, CA TX(USA).

Responsibilities:

- Project Planning, tracking of team's progress, planning of team's career growth and taking corrective actions.
- Built and managed a team of 20 engineers and was responsible of mentoring teams, 1:1, conducted performance reviews and annual recommendations, facilitating trainings for the team.
- Applying Best practices, application Architecture and code review
- Creating HLD, LLD and POCs of custom components for iOS and Android.
- Design and development using MVVM, **React Native**, Swift, SwiftUI, Protocol Oriented Programming (POP), Swift Concurrency
- Interaction with other vendor partners to solve the production issues and Communication with Stakeholders.
- Analysis of the backlog with Product Owner for future releases.
- Identify and prioritize the issues to be fixed in the current release.
- Identify the tech debt items to release in current and upcoming releases.

Technologies - React Native iOS, XCode, Swift, SwiftUI, , iPhone, iPad, Kotlin, Java, Charles, Postman

Tanish Electronics (Jan 2017 - July 2019) - Engineering Manager - Mobile Apps

Product: Wireless Automatic Water Pump Controller mobile App

Description: TANISH has implemented, manufactured, and developed a low cost and robust Wireless automatic pump controller which automatically start and stop domestic and commercial single/three phase motors/submersibles without any wire connectivity using 433MHz Radio Frequency modules. It also supports multiple tanks with web-based monitoring and SMS/Voice alert. Most of the systems existing in the market are based on wired communication and are using obsolete wired technology, therefore, TANISH came up with a new and stable solution for the existing problem.

Responsibilities

Built and grew a team of 10 engineers; mentored team members; helped leadership with technical and product strategy decisions, and conducted performance reviews, annual recommendations.

Responsible for presales, estimating, planning, executing, tracking, delivering, testing and deploying.

- Collaborating and communicating with customers and leadership teams.
- Creating Project Plan and documentation, tracking the project progress, and correcting direction as required.
 - Used MVVM pattern and clean architecture principles for designing the application
 - Analysis of the backlog with Product Owner for future releases.
 - Identify and prioritize the issues to be fixed in the current release.
 - Identify the tech debt items to release in current and upcoming releases.
 - Used Jenkins pipelines for managing the code submissions

Technologies: Objective C, iOS, Android, XCode, Swift, Kotlin,Java, Charles, Postman

Stryker (Dec 2015 - Jan 2017) - Engineering Manager - Mobile Apps

Mobile Apps: Stryker Internal Mobile Apps on iOS/Android

Description: Stryker internally used various mobile applications to showcase their medical products for International Marketing team, Service based applications to provide services to the hospitals, Live streaming products for live surgeries and lot more apps.

Achievements: Rearchitected all existing applications to circumvent the redundancy of multiple applications used among different divisions for the same purpose. Designed a single platform to be used by different divisions of the Organization. This approach helped in reducing the maintenance cost of applications. Developed roadmap for mobile platform for next 5 years. Developed a strategy to bring the source code onto a single code base using Xamarin to lower the development and maintenance costs.

Responsibilities:

- Design and development
- Sprint planning and execution.
- Handling of production environment in case of any alert.
- Monitoring the app crashes on Crashlytics and Firebase

- Monitoring the API failures to identify the app behavior using Firebase logs
- Working with the team on a day-to-day basis to analyze the problem based on API error response.
- Interaction with other vendor partners to solve the production issues and Communication with Stakeholders.
- Analysis of the backlog with Product Owner for future releases.
- Identify and prioritize the issues to be fixed in the current release.
- Identify the tech debt items to release in current and upcoming releases.

Technologies: Objective C, iOS, XCode, Swift, Kotlin, Java, Charles, Postman

GlobalLogic (Dec 2006 - Jan 2015) - Sr. Consultant / Lead

Kohls, USA - Sr. Consultant / Lead through Globallogic Inc, USA

Mobile App: Kohls iOS Mobile App

Description: As a retail mobile application, Kohls App provides shopping experience to the user with browsing of all products available on Kohls stores in the USA. Users can also search nearby stores and check availability of products. Enrolment features provide the access of points earned by the User and can avail offers on the products

Achievements: As a Tech Lead, I designed and implemented E-Comm application Kohl's for iOS (iPhone/iPad) from the scratch by suggesting clients to use native libraries instead of using existing app as a web interface. Existing Web interface of the Kohls app was very slow in response. Due to fast responsiveness and robust design of the app, I also got appreciated by the client (Kohls) which also increased the downloads of the app. This native approach turned profit of the organization in a huge difference

Responsibilities:

- Requirement gathering, Analysis and Design for the Application.
- Application Architecture and code review.
- Implemented offline functionality
- Integration of RESTful services with JSON response.
- Integrated third party SDK to faster the development.
- Implemented Logging and Monitoring approach for field monitoring and analysis.
- Developed key module like app navigation framework or scanner module.
- Code optimization and improvement for stability and scalability.
- Engaged in Real-time troubleshooting when any production issue comes.
- Analysis of the server logs for troubleshooting

Technologies: Objective C, iOS, XCode, iPhone, iPad

Verizon Wireless, USA - Sr Consultant/Lead through Globallogic Inc, USA

Mobile App: Verizon iOS FiOS Mobile

Description: Application supports Live Streaming TV channels both in and out of FiOS Home. Users can enjoy watching Live TV channels on mobile devices anywhere. App also provides a soft remote control with all features available on your real hard remote control. Application can download movies/ tv shows as well.

Achievements: Developed and designed "Remote Control" and "Download Manager" modules of the app.

Responsibilities:

- Lead a Team for the project for all the platforms.
- Requirement gathering, analysis and design
- Implemented a universal application which runs on both Mobile and Tablet
- Application and Module development in iOS using objective C
- Mobile and Tablet app Architecture and code review
- Client / Partner Interaction
- Engaged in App deployment and release process for the application.
- Review the user feedback and incorporate the solution in future release

Technologies: Objective C, iOS, XCode, Swift, iPhone, iPad

Verizon Wireless, USA - Sr Consultant/Lead through Globallogic Inc, USA

Mobile App: iOS RedBox Instant by Verizon

Description: Verizon Redbox Instant provides a RICH UI client which can download the media content e.g Movies, I V Shows, Games from the server. Media can also be browsed with complete details before downloading. RedBox Instant also support video streaming

Achievements: Designed and Developed “different UI modules and Network layer of the app.

Responsibilities:

- Requirement gathering, analysis and design
- Implemented a universal application which runs on both Mobile and Tablet
- Application and Module development in iOS using objective C
- Mobile and Tablet app Architecture and code review
- Client / Partner Interaction
- Engaged in App deployment and release process for the application.
- Review the user feedback and incorporate the solution in future release

Technologies: Objective C, iOS, XCode, Swift, iPhone, iPad

Worked in Globallogic as a Sr. Consultant/Lead for following Windows mobile applications :

- a) SkyFire, USA - Windows mobile app
- b) BroadSoft, USA - Windows mobile app
- c) Maptuit, USA - Windows mobile app
