PROFESSIONAL SUMMARY

✓ IT Experience Summary

With over **15 years** of comprehensive experience in the **Oracle Technology** sector, I have specialized in various industries including **Manufacturing, Pharmaceuticals, Energy and Utilities, E-commerce** and **Banking** serving in roles as an **Oracle DBA, Oracle EXADATA DBA, Oracle Golden Gate DBA, Oracle RAC Administrator, Oracle EBS Apps DBA, Oracle BI Admin, Performance Tunning DBA and Fusion Middleware Administrator** including **5+ years of experience in Oracle Cloud Infrastructure Database Administrator** and **1 year of experience in Google Cloud Database Engineer** with database like AlloyDB, Cloud Spanner and BigQuery along with provisioning cloud instances with Terraform(IaaS). Experienced in handling Production and Non-Production Databases. Have worked for multiple clients managing their Oracle databases and EBS Application and Databases. Responsible for effective communication between the project team, support team and the customer. Provide day to day direction to the project team and regular project status to the customer. Translate customer requirements into formal requirements and design documents, establish specific solutions, and leading the efforts including programming and testing that culminate in client acceptance of the results. Utilize in-depth knowledge of Oracle Application DBA experience in Oracle and other leading-edge products and technology in conjunction with industry and business skills to deliver solutions to customer. I have been involved with multiple upgrade projects and platform migration projects. I have excellent analytical, interpersonal, communicational and organizational skills aimed at achieving project milestones. I have good knowledge and experience on **Oracle Cloud Infrastructure** and certified with Cloud certification like OCI Cloud Architect Associate from Oracle.

My role as an Oracle Cloud Infrastructure Database Admin, Application & Database Administrator is to install and upgrade oracle applications and database along with third party applications. I have worked and gained expertise in below software's and Technologies.

- Oracle EXADATA / Oracle Cloud Infrastructure ExaCS/ExaCC
- Google Cloud Database Engineer / AlloyDB/ Cloud Spanner/ BigQuery
- Cloud provisioning using Terraform (IaaS)
- Oracle Golden Gate
- Oracle Dataguard
- Oracle RAC Cluster
- Oracle Database and Sql Tuning/ CPU tuning / Memory Tunning/ Filesystem, storage I/O Tunning
- Linux Red Hat Operating System
- RMAN (Database Recovery Manager Utility).
- Oracle Cloud Infrastructure Autonomous database
- Oracle Cloud Infrastructure networking like VCN, gateways, route tables.
- Oracle Cloud Infrastructure Storage Services like object storage, Block/Boot Volume.

- Oracle Cloud Infrastructure Identity and Access Management
- Oracle Identity Cloud Services (OIC)
- Oracle Database 10g, 11g, 12c,19c,21c,23ai.
- Oracle EBS 11i & R12.
- OBIEE Administration/ BI Oracle Analytics Cloud (OAC)
- Oracle Enterprise Manager 12C/13C
- Oracle WebLogic.
- SOA 11g/12c
- Oracle Discoverer.
- BMC Remedy Tool.
- HP-Quality Center.
- HP-Kintana (Code deployment tool).
- HUDSON (Code deployment tool).
- SVN (Code repository tool).
- CONTROL M JOB SCHEDULER/ UC4
- ServiceNow
- Rally

✓ **Relevant Oracle DBA Experience Summary:**

- **15 Years** of Experiencing in Oracle Database Administrations, Oracle EXADATA administration, Oracle RAC and Clusterware administration, Oracle Golden Gate setup and administration, Database Performance tuning, SQL Tuning, CPU, memory, I/O tuning, Networking details like protocols, DNS, routing table, Linux OS operating system.
- **15 Years** experienced and proficient in technologies like EBS R12, EBS 11i, RDBMS 10g/11g, RAC, ASM, RMAN, Database and Application Installation, Upgrades and Enterprise Manager (EM) Grid Control 11g, Cloud Control 12C/13C EM.
- **6 Years** experience in Oracle Cloud Infrastructure Database Administrator.
- **7 Years** experienced with Oracle 12c and **3 Years** in Oracle 19c Database.
- **8 Years** experienced working with EXADATA environment and worked with EXADATA wait event performance issue in Oracle Database.
- **1 year** experienced in Google Cloud Database Engineer with AlloyDB, Cloud Spanner and BigQuery.
- Experienced in Cloud provisioning using Terraform (IaaS)
- Experienced with analysis and resolving of issues in EXADATA machines from Linux server side like high load, High CPU utilization, High Memory Utilization.
- Experienced with Oracle Quarterly CPU patching in EXADATA environment.
- Experienced with WebLogic Installation and Administration, Middleware installation and support like OBIEE, SOA, OTM.
- Have exposure in a variety of environments like Windows XP, HP-UX Itanium, HP-UX PARISC, Red-hat Enterprise Linux
- Successfully implemented migration of Databases and Applications across data centres.

- Performed instance migration across **platforms and DB upgrade from 10.2 to 11gR2**.
- Experienced in **RAC Administration (11gR2) with ASM storage** and backup and recovery using RMAN.
- Proficient in applying **Oracle Application patches, Database patches, Upgrades, Apps cloning** and **Oracle Apps SYSADMIN functionalities**.
- Proactive Monitoring to identify areas that needs to be modified to improve performance in the application and database using **OEM 11g/12C Monitoring**.
- Performed database and application cloning from production to development environment and resolved various issue encountered during cloning.
- Experienced in Oracle E-Business Suite implementations and Upgrades from CRP, Development and UAT to production as an Oracle Applications DBA.
- Involved in **installation of R12 E-Business suite and upgrading to R12.1.3**.
- Involved in **upgrading of 11.5.10.2 to R12.0.3** oracle instance.
- Performed instance build for Oracle Database in RAC.
- Experience in setting up **HTTP Load balancing** and implementing Shared APPL_TOP and PCP.
- Expertise in troubleshooting Workflow and Notification Issues.
- Successfully implemented **Oracle 10g, 11g Data Guard on HP-UX and Linux environment**.
- Experienced with **data pump, export and import utilities** in backup and recovery of database.
- Expertise in implementing **OATM**.
- Involved in Daily monitoring of mission critical Production and Development System, which includes application, as well as database monitoring.
- Managed multiple production databases on 10g and 11g.
- **Writing shell script for automation** of DB RMAN backup and cloning of Oracle Databases and Applications.
- **Tuning the databases** for optimal performance and monitoring CPU performance.
- Experienced in Oracle Support processes for technical requests through Metalink and other Support Procedures.
- **24x7 DBA support** for multiple production, test, and development environments.
- Ability to build professional relationships and capable of multi-tasking for various projects and prioritizing the work.
- Mentoring the junior team members and making them well equipped about the processes followed and technologies involved.

SKILL SET

Databases:	Oracle 10g/11g/12c/19c/21c/23ai, Google Cloud Database AlloyDB, Cloud Spanner, BigQuery, Microsoft SQL Server, Big Data Hadoop
Programming Languages:	SQL and PL/SQL, Unix Shell Scripting, Python, Terraform, Ansible
Application Servers:	Oracle Application Server (10g & 11g), Apache, WebLogic
Applications:	Oracle EBS 11i/R12, Oracle Fusion Middleware, Oracle Access Manager, Oracle Internet Directory, Oracle IDCS, Oracle EBS Asserter, Oracle Analytics Cloud, Oracle Integration Cloud (OIC), Oracle Enterprise Manager
High Availability:	Oracle (RAC) Cluster ware 11g/12c/19c, Oracle Datagaurd, ZDLRA, FSFO
Operating Systems:	Red-hat Enterprise Linux, HP-UX Itanium, HP-UX PARISC, Windows XP
Tools:	SQL Tunning Advisor, AWR, OSwatcher, ExaChk, OSChk, Trace File Analyzer (TFA), Sundiag, SQL*Plus, SQL*Loader, Export & Import utility (regular and data pump), OEM, ASMCMD, FNDLOAD, DBUA, DBCA, SQL trace, tkprof, RMAN, TSM TDPO, BMC Remedy, SVN, Hudson, Import/Export, TOAD,SQL Developer, SQL*Loader, OEM, Putty, WinSCP, Kintana, Control M , Splash BI,STAT, Splunk, SolarWinds, UC4 Scheduler, Oracle Data Integrator, Informatica

PROFESSIONAL CERTIFICATION

- Oracle Cloud Infrastructure 2024 Generative AI Professional
- Google Professional Cloud Database Engineer Certified 2024
- AWS Certified Cloud Practitioner 2021
- Oracle Cloud Infrastructure Foundations 2020 Certified Associate
- Oracle Cloud Infrastructure 2019 Certified Architect Associate
- Oracle Autonomous Database Cloud 2019 Certified Specialist
- Oracle Cloud Infrastructure 2019 Certified Cloud Operations Associate
- Oracle Database 11g certified Implementation Specialist
- Oracle Exadata 11g certified Implementation Specialist
- Oracle Enterprise Manager 11g certified Implementation Specialist

EDUCATIONAL QUALIFICATION

Bachelor of Engineering in Electronics and Communication Engineering from West Bengal University of Technology, West Bengal, India

PROFESSIONAL EXPERIENCE

Client: The Hartford, Charlotte, NC

MAR 2025 – Present

Role: Oracle EXADATA DBA, Oracle DBA, Oracle Cloud Infrastructure Database Admin,
Google Cloud Database Engineer

Employer: Cognizant Technology Solutions

Project Summary:

The Hartford is a leader in property and casualty insurance, group benefits and mutual funds. For more than 200 years, Hartford provided people and businesses with the support and protection they need to pursue their unique ambitions, seize opportunity and prevail through unexpected challenges. Hartford view underwriting human

achievement to be at the heart of what Hartford do, aiming to build resilience in Hartford communities, empower personal and business success for Hartford customers and create a culture where Hartford employees can thrive. In the process of Hartford's IT infrastructure enhancement, Hartford is trying to move few of the Database and Infrastructure to other cloud technology from Oracle and AWS to Google cloud along with a need of continuation of support of existing database system resided on Oracle and AWS.

Responsibilities:

- Administering Oracle EXADATA database with regular activity like patching, cloning, Exadata Sparse cloning, backup, resolving performance issues and user issues.
- Design and implement scalable, secure, and reliable cloud solutions using Google Cloud Platform services. Develop and manage AlloyDB for PostgreSQL instances, ensuring optimal performance and availability.
- Collaborate with cross-functional teams to gather requirements and translate them into technical solutions. Automate deployment, monitoring, and maintenance processes using Infrastructure as Code (IaC) tools.
- Optimize database performance through tuning, indexing, and query optimization. Ensure data security and compliance with industry standards and best practices.
- Troubleshoot and resolve issues related to cloud infrastructure and database services. Stay updated with the latest Google Cloud Platform and AlloyDB features and best practices.
- Managing technology architect, DBA and application teams in both onshore and offshore to provide 24*7 gold support for high critical financial ERP systems.
- Regular support activities like cloning, patching, monthly migration and change, resolve user related issues for all kind of oracle applications and databases.

Environment: GCP, OCI, AlloyDB, Cloud Spanner, BigQuery, Terraform(IaaS), Oracle EXADATA, RDBMS 21c/19c/12c , Red Hat Linux, RHEL 8.3, OEM 13c, RAC, ASM, Oracle Linux

Client: Consolidated Edison of New York Inc., New York, NY

AUG 2023 – MAR 2025

Role: Oracle EXADATA DBA, Oracle Golden Gate DBA, Oracle RAC Admin, Oracle EBS Apps DBA, Oracle DBA, Oracle BI Admin, Oracle Cloud Infrastructure Database Admin

Employer: Cognizant Technology Solutions

Project Summary:

Consolidated Edison, Inc. operates as holding company, which through its subsidiaries engages in the business of regulated electric, gas, and steam delivery. It operates through the following segments: Consolidated Edison Company of New York, Inc. (CECONY), Orange and Rockland Utilities, Inc. (O&R), Con Edison Clean Energy Businesses, Inc. and Con Edison Transmission, Inc. The Consolidated Edison Co. of New York segment involves regulated electric, gas, and steam utility businesses. The Orange & Rockland Utilities segment covers regulated electric and gas utility delivery businesses. The Con Edison Clean Energy Businesses, Inc. segment develops, owns and operates renewable and energy infrastructure projects and provides energy-related products and services to wholesale and retail customers. The Con Edison Transmission, Inc. segment invests in electric and gas transmission projects. The company was founded in 1823 and is headquartered in New York, NY.

Project mainly includes to manage the IT infrastructure of financial ERP system and integrated systems which include regular support activity, upgrades, migration to cloud, resolve user related issues and all kinds of related setups, manage technology architect, DBA and application teams.

Responsibilities:

- Administering Oracle EXADATA database with regular activity like patching, cloning, Exadata Sparse cloning, backup, resolving performance issues and user issues.
- Administering and resolving issues on Oracle Goldengate along with performance issues.
- Working on Database and application performance issue.
- Administering and managing multi node database in RAC and ASM in version 19c.

- Managing technology architect, DBA and application teams in both onshore and offshore to provide 24*7 gold support for high critical financial ERP systems.
- Administering and working on Oracle Autonomous Database.
- Setup BCP for any kind of disaster like cyber-attack etc. to recover high critical systems with minimum to no time and data loss along with team member management to support and work on the systems in critical conditions.
- Migrations of EBS and BI environment from on premises to Oracle Cloud infrastructure.
- Setup Disaster Recovery in OCI with Cross region functionality.
- Perform quarterly cloud infra patching activity which include oracle Infra patch update, OS Image update, GI Infra update and DB home update.
- Coordinate and perform application server level OS patching in OCI.
- Manage ad hoc refresh of database from cloud backup based on the requirement along with setup user access to OCI cloud storage without having access to OCI.
- Worked on integration of scheduled jobs in Oracle Integration Cloud (OIC) and quarterly update of OIC.
- Setup process for BI OAC DR sync in every month with production along with all kinds of maintenance activity.
- Setup IDCS with EBS and BI users to enable SSO in OCI.
- Regular support activities like cloning, patching, monthly migration and change, resolve user related issues for all kind of oracle applications and databases.

Environment: OCI, EBS R12, RDBMS 19c/12c, Oracle Fusion Middleware, Red Hat Linux, RHEL 8.3, OEM 13c, RAC, ASM, Oracle Linux, SQL*Plus, WebLogic, SOA, OBIEE

Client: AbbVie / Allergan, IL

FEB 2022 – AUG 2023

Role: Oracle Exadata DBA, Oracle EBS APPS DBA, Oracle RAC Admin, Oracle Goldengate DBA, Oracle DBA, Oracle BI Admin

Employer: Cognizant Technology Solutions

Project Summary:

AbbVie embrace the responsibility of making a remarkable impact on people's lives through the innovative medicines and solutions AbbVie create together. This is driven by AbbVie's compassion for people, commitment to innovation and inclusion, service to the community, and uncompromising integrity at the heart of everything AbbVie do.

Operating as one AbbVie team, AbbVie care deeply for patients, their families, employees, and communities. AbbVie strive to always do the right thing, pursuing the highest standards in quality, compliance, safety, and performance. In everything AbbVie does, AbbVie invest and innovate relentlessly to tackle unmet needs, creating new medicines and healthcare approaches for a healthier world.

Responsibilities:

- Oracle Application and database Day to day Support of EBS 12.1.3 and 11.2.0.5 and Oracle database 11.2.0.4.
- Administering EXADATA including manage storage cell, manage database server, applying quarterly patching.
- Administering Goldengate Active passive structure include implementation, support, and performance issue.
- Administering RAC, high availability components, cluster services, HAIP, SCAN.
- Administering Active physical standby includes implementation and support.
- Alert and Production EBS application and database Monitoring and take required action to prevent high risk production issue.
- Worked with various Oracle Applications Utilities like Rapid Install, FNDCPASS, f60gen, CONCSUB etc.
- Planning and administering backup and recovery strategies.
- Involved in the Database design and deciding the requirements for migrating Database to new servers.
- Worked closely with technical, functional teams and Oracle Support to troubleshoot and resolve issues during upgrade.
- Involved in Oracle Applications Tablespace Management (OATM) as part of the upgrade.
- Migrating databases from PA-RISC environment to HP-UX Itanium.
- Performed the installation of oracle 10g RAC database and have good knowledge in basic concepts of RAC.

- Installed and configured GRID and ASM as part of the migration.
- Performed the conversion of non-ASM instance to ASM instance.
- Converting Database to 2-Node RAC.
- Maintained and provided PROD support for EBS 11i Application and Database.
- Performing SYSADMIN activities like user maintenance and setting up profiles.
- Monitoring of Concurrent Managers and troubleshooting long-running concurrent programs.
- Providing DBA support during month end activities.
- Automation of DBA monitoring activities like purging older archive logs, concurrent manager log/out files, Gather schema statistics.
- Provided application support to users and created a log of all the problems with solutions for future reference.

Environment: EBS R12, EXADATA, RDBMS 12c/11g, Red Hat Linux, RHEL 7.9, OEM 13c, RAC, ASM, Oracle Linux, SQL*Plus

Client: Verint Corp. Alpharetta, GA

OCT 2020 – FEB 2022

Role: Oracle Exadata DBA, Oracle DBA, Oracle RAC Admin, Oracle Goldengate DBA,

Oracle EBS Apps DBA, Oracle BI Admin, Oracle SOA Admin, Infrastructure Technology Architecture

Employer: Cognizant Technology Solutions

Project Summary:

Verint helps organizations adapt to the future of work, eliminate the inefficiencies created by organizational and data silos, and consistently deliver differentiated experiences at scale.

Verint solutions help iconic brands close the gap created when they lack the resources required to deliver experiences that fulfill customer expectations.

Closing this Engagement Capacity Gap helps them build lasting relationships with customers and drive real business results.

Project includes support migration activity of EBS system from on prem to OCI, provide inputs and work with the team to setup the systems accordingly. Regular support activities along with upgrades, setup automated clone tool, patching.

Responsibilities:

- Administering EXADATA and resolving performance issue.
- Administering and managing multi node database in RAC and ASM in version 19c.
- Responsible for effective communication between the project team, support team and the client. Provide day to day direction to the project team and regular project status to the customer.
- Translate customer requirements into formal requirements and design documents, establish specific solutions, and leading the efforts that culminate in client acceptance of the results.
- Oracle EBS and Non EBS database and application migration from on premises to Oracle Cloud Infrastructure.
- Implementation, Administering and resolving issues on Oracle Goldengate along with performance issues.
- Setup Disaster Recovery in OCI with Cross region functionality.
- Setup custom backup of database and application block volumes in OCI as per company policy.
- Set up automated end to end EBS database and application daily refresh in OCI.
- Setup OCI IDCS to enable SSO authentication to login to EBS with Microsoft Azure AD.
- Upgrade EBS and Non EBS DB from 11g to 19c.
- Upgrade BPEL SOA application from 11g to 12c.
- Regular support activities for all kind of oracle applications and databases.

Environment: OCI, EBS R12, RDBMS 12c/11g, Oracle Fusion Middleware, Red Hat Linux, RHEL 7.9, OEM 13c, RAC, ASM, Oracle Linux, SQL*Plus, WebLogic, SOA, OBIEE

Client: American Tire Distributors. Charlotte, NC

Dec 2016 – SEP 2020

Role: Oracle EXADATA DBA, Oracle RAC Admin, Oracle Goldengate DBA,
Oracle DBA, Oracle EBS APPS DBA, Oracle BI Admin, Oracle SOA Admin
Employer: Cognizant Technology Solutions

Project Summary:

As the nation's largest tire distributor, ATD offers the products, programs and services to ensure that ATD customers, manufacturers and partners have every advantage in building the success of their business.

Tire dealers and retailers depend on ATD for 24/7 access to the industry's broadest and deepest inventory at competitive prices. ATD's coast-to-coast distribution network supports approximately 70,000 customers across the U.S. and Canada to provide rapid and frequent delivery of tires, custom wheels and shop supplies.

By choosing ATD as a distribution partner and benefitting from a wide range of innovative programs and services, customers are equipped with everything they need to move ahead of the competition.

Project includes daily support of critical retail ERP system to provide almost 100% availability of production system along with medium to small upgrades, new configuration, installation, patching cloning, daily user support.

Responsibilities:

- Administration of Oracle RAC, clusterware and fix issues.
- Implementation, Administering and resolving issues on Oracle GoldenGate along with performance issues.
- Administering and managing EXADATA environment which include administration, patching, performance tuning.
- Patching coordinator for all Critical patch update and application patch
- Regular Support for all production and non-production environment.
- Responsible for effective communication between the project team, support team and the customer. Provide day to day direction to the project team and regular project status to the customer.
- Translate customer requirements into formal requirements and design documents, establish specific solutions, and leading the efforts that culminate in client acceptance of the results.
- Manage team of Oracle DBAs as a Team lead and provide 24*7 support of Production retail ERP system.
- Point out the key risk and enhancement for betterment of infrastructure.
- Working on internal project and support them as database administrator.
- Planning and administering backup and recovery strategies.
- Maintained and provided PROD support for EBS Application and Database.
- Maintained and provided PROD support for Oracle Fusion Middleware SOA services.
- Performing SYSADMIN activities like user maintenance and setting up profiles.
- Monitoring of Concurrent Managers and troubleshooting long-running concurrent programs.
- Providing DBA support during month end activities.
- Automation of DBA monitoring activities like purging older archive logs, concurrent manager log/out files, Gather schema statistics.
- Maintaining Databases including backups, restores, recoveries, imports, exports.
- Set up and administer tablespaces, data files, tables, indexes, views, sequences, synonyms and DB links.
- Good Experience on Oracle 10g new features like data pump, flashback tables, ASM, ADDM, AWR, etc.
- Perform weekly cloning activities of non-prod instances, both application and database.
- Responding to different types of alerts automation using oracle alerts.
- Configured Workflow Notification Mailer for inbound and outbound processing.
- OBIEE Administration and support.

Environment: EBS R12, RDBMS 11g/10g, Oracle Fusion Middleware, Red Hat Linux, RHEL 5.2, OEM, RAC, ASM, HP Kintana, EXADATA, Oracle Linux, SQL*Plus, WebLogic, SOA Admin, SABRIX, CONTROL-M, Splash BI

Client: Ingersoll Rand., Charlotte, NC

Aug 2016 – Dec 2016

Role: Oracle EXADATA DBA, Oracle RAC Admin, Oracle Goldengate DBA,
Oracle DBA, Oracle EBS APPS DBA, Oracle BI Admin

Employer: Cognizant Technology Solutions

Project Summary:

Ingersoll Rand (NYSE:IR) advances the quality of life by creating comfortable, sustainable and efficient environments. IR people and family of brands—including Club Car®, Ingersoll Rand®, Thermo King® and Trane®—work together to enhance the quality and comfort of air in homes and buildings; transport and protect food and perishables; and increase industrial productivity and efficiency. We are a global business committed to a world of sustainable progress and enduring results.

Responsibilities:

- Oracle Application and database Day to day Support of EBS 12.1.3 and 11.2.0.5 and Oracle database 11.2.0.4.
- Administering EXADATA including manage storage cell, manage database server, applying quarterly patching.
- Administering GoldenGate Active passive structure include implementation, support, and performance issue.
- Administering RAC, high availability components, cluster services, HAIP, SCAN.
- Administering Active physical standby includes implementation and support.
- Perform end to end support task for Oracle SOA applications/Fusion Middleware production and development systems by checking critical SOA loaders job, checking the coherence data, WEB domain JAVA active thread count, checking all SOA data sources, Bridges, Channels with tools like SOA Coherence Editor, SOAPUI, JAVA Visual VM
- Alert and Production EBS application and database Monitoring and take required action to prevent high risk production issue.
- Worked with various Oracle Applications Utilities like Rapid Install, FNDCPASS, f60gen, CONCSUB etc.
- Planning and administering backup and recovery strategies.
- Involved in the Database design and deciding the requirements for migrating Database to new servers.
- Worked closely with technical, functional teams and Oracle Support to troubleshoot and resolve issues during upgrade.
- Involved in Oracle Applications Tablespace Management (OATM) as part of the upgrade.
- Migrating databases from PA-RISC environment to HP-UX Itanium.
- Performed the installation of oracle 10g RAC database and have good knowledge in basic concepts of RAC.
- Installed and configured GRID and ASM as part of the migration.
- Performed the conversion of non-ASM instance to ASM instance.
- Converting Database to 2-Node RAC.
- Maintained and provided PROD support for EBS 11i Application and Database.
- Performing SYSADMIN activities like user maintenance and setting up profiles.
- Monitoring of Concurrent Managers and troubleshooting long-running concurrent programs.
- Providing DBA support during month end activities.
- Automation of DBA monitoring activities like purging older archive logs, concurrent manager log/out files, Gather schema statistics.
- Maintaining Databases including backups, restores, recoveries, imports, exports.
- Set up and administer tablespaces, data files, tables, indexes, views, sequences, synonyms and DB links.
- Good Experience on Oracle 10g new features like data pump, flashback tables, ASM, ADDM, AWR, etc.
- Applying patches in EBS 11i and R12 application.
- Perform weekly cloning activities of non-prod instances, both application and database.
- Responding to different types of alerts automation using oracle alerts.
- Configured Workflow Notification Mailer for inbound and outbound processing.
- Provided application support to users and created a log of all the problems with solutions for future reference.

Client: Alcoa Inc., New Kensington, PA

Mar 2016 – July 2016

Role: Oracle DBA, Oracle EXADATA DBA, Oracle RAC Admin, Oracle Goldengate DBA,
Oracle EBS APPS DBA

Employer: Tata Consultancy Services

Project Summary:

Alcoa is the world's leading producer of primary aluminum and fabricated aluminum, as well as the world's largest miner of bauxite and refiner of alumina. In addition to inventing the modern-day aluminum industry, Alcoa innovation has been behind major milestones in the aerospace, automotive, packaging, building and construction, commercial transportation, consumer electronics and industrial markets for more than 120 years.

Among the solutions Alcoa markets are flat-rolled products, hard alloy extrusions, and forgings, as well as Alcoa® wheels, fastening systems, precision and investment castings, and building systems in addition to its expertise in other light metals such as titanium and nickel-based super alloys.

Sustainability is an integral part of Alcoa's operating practices and the product design and engineering it provides to customers. Alcoa has been a member of the Dow Jones Sustainability Index for nine consecutive years and approximately 75 percent of all the aluminum ever produced since 1888 is still in active use today.

Responsibilities:

- Performed SYSADMIN activities like enabling and disabling traces, user creation, assigning menus, responsibilities to users as per requests, workflow navigator and maintained concurrent managers.
- Maintenance included relinking applications objects and regenerating forms and reports using all AD utilities Autoconfig, adctrl, adadmin, adpatch etc. Also worked with various Oracle Applications Utilities like Rapid Install, FNDCPASS, f60gen, CONCSUB etc.
- Apart from the above-mentioned tasks, daily monitoring is carried out before start of business to ensure database availability and smooth functioning of databases. Daily monitoring includes checking whether all databases are running, listener is running, concurrent managers are running, Unix error messages, disk space availability, checking for alert logs and trace files, checking for invalid objects etc.
- Worked with various Oracle Applications Utilities like Rapid Install, FNDCPASS, f60gen, CONCSUB etc.
- Planning and administering backup and recovery strategies.
- Have expertise in activities like maintaining instances, maintenance of file system and taking appropriate backups for security and consistency.
- Validating & Creating grants & synonyms on Apps schema, performed jar file/forms generation as a post patch step, relinking the Oracle apps programs.
- Setting up scripts in CRON to purge concurrent manager log and out files, database trace files periodically.
- Provided application support to users and created a log of all the problems with solutions for future reference.
- Worked closely with technical, functional teams and Oracle Support to troubleshoot and resolve issues during upgrade.
- Maintained and provided PROD support for EBS 11i Application and Database.
- Performing SYSADMIN activities like user maintenance and setting up profiles.
- Monitoring of Concurrent Managers and troubleshooting long-running concurrent programs.
- Providing DBA support during month end activities.
- Automation of DBA monitoring activities like purging older archive logs, concurrent manager log/out files, Gather schema statistics.
- Maintaining EXADATA Databases including backups, restores, recoveries, imports, exports.
- Set up and administer tablespaces, data files, tables, indexes, views, sequences, synonyms and DB links.
- Good Experience on Oracle 10g new features like data pump, flashback tables, ASM, ADDM, AWR, etc.
- Applying patches in EBS 11i application.

- Perform weekly cloning activities of non-prod instances, both application and database.
- Responding to different types of alerts automation using oracle alerts.
- Configured Workflow Notification Mailer for inbound and outbound processing.

Environment: EBS R12, RDBMS 11g/10g, Red Hat Linux, RHEL 5.2, OEM, RAC, ASM, HP Kintana, EXADATA Oracle Linux, SQL*Plus, WebLogic, SOA Admin, crontab.

Client: Johnson Controls Inc., Milwaukee, WI

Jan 2015 – Feb 2016

Role: Oracle DBA, Oracle EBS APPS DBA, Oracle RAC Admin, Oracle Goldengate DBA, WebLogic Administrator, System Administrator

Employer: Tata Consultancy Services

Project Summary:

Johnson Controls Inc. (JCI) Building Efficiency (BE) business unit is in the business of providing solutions for operating building effectively and efficiently to increase a building's energy efficiency and operational performance. This includes selling HVAC&R equipment's and control systems, industrial and commercial refrigeration, fire and security systems and service for commercial, industrial and residential buildings. JCI BE is using an integration application consisting of a homegrown application system called Integrated Business System (IBS) and Oracle Applications (Oracle e-Business Suite), along with various other applications to run the daily business operations.

The main scope of ADTi Implementation Project is to migrate Database and Application from Richardson Data Centre to Milwaukee Data Centre, which included applications like EBS, OTM, OBIEE, SOA etc. Implemented the migration of 18 PROD servers and 30 DEV servers in less than 3 months with a team strength of three members. Project is in Support Phase now.

Responsibilities:

- Supported 100+ databases ranging in size between 30GB to 7TB.
- Installed and configured RAC and Performed up-gradation of grid infrastructure and Oracle databases from 11.2.0.1 to 11.2.0.3.
- Performed health checks in RAC instances using CRSCTL and SRVCTL utility.
- Performed Database refresh from Production RAC environment to TEST RAC environment.
- Experience in monitoring and managing of Oracle instances using Enterprise Manager Grid Control (OEM grid) 10g /11g/12c.
- Starting and stopping the agents to clear metric alerts and collecting ADDM reports in OEM.
- Creating blackouts and templates in OEM and migrated databases from Non ASM TO ASM.
- Involved in Tuning the RAC interconnect Finding RAC wait events. In addition, tuning the RAC using the Enterprise Manager Grid Control.
- Performed various tasks on ASM, creating a disk group, adding a disk, making disk online and offline and troubleshooting issues in ASM environment.
- Implemented physical standby database for maximum availability using Oracle Data Guard 11g with Oracle Enterprise Manager (OEM) 12C cloud Control.
- Create thorough documentation of installation procedures and administrative tasks in the clustered environment.
- Generated and automated Stats pack/AWR reports from Oracle 11g/10g database and analyzed the reports for Oracle wait events, time-consuming SQL queries, table space growth, and database growth.
- Involved in SQL Query tuning and provided tuning recommendations to ERP jobs, time/CPU consuming queries.
- Used Explain Plan, Oracle hints and creation of new indexes, identifying the join methods (Nested/Hash/Merge join/Sort merge join) between the row sources for tables, to improve the performance of SQL statements.
- Addressed developers/testers requests to clone production databases for the purposes of testing using RMAN.
- Planned and Implemented Disaster Recovery (DR), Standby databases with High Availability using RAC, and Data Guard.

Client: Alcoa Inc., Pittsburgh, PA

Mar 2014 - Dec 2014

Role: Oracle DBA, Oracle EBS APPS DBA, Oracle RAC Admin, Oracle Goldengate DBA,
WebLogic Administrator

Employer: Tata Consultancy Services

Project Summary:

Alcoa is the world's leading producer of primary aluminum and fabricated aluminum, as well as the world's largest miner of bauxite and refiner of alumina. In addition to inventing the modern-day aluminum industry, Alcoa innovation has been behind major milestones in the aerospace, automotive, packaging, building and construction, commercial transportation, consumer electronics and industrial markets for more than 120 years.

Among the solutions Alcoa markets are flat-rolled products, hard alloy extrusions, and forgings, as well as Alcoa® wheels, fastening systems, precision and investment castings, and building systems in addition to its expertise in other light metals such as titanium and nickel-based super alloys.

Sustainability is an integral part of Alcoa's operating practices and the product design and engineering it provides to customers. Alcoa has been a member of the Dow Jones Sustainability Index for nine consecutive years and approximately 75 percent of all the aluminum ever produced since 1888 is still in active use today.

Responsibilities:

- Performed SYSADMIN activities like enabling and disabling traces, user creation, assigning menus, responsibilities to users as per requests, workflow navigator and maintained concurrent managers.
- Maintenance included relinking applications objects and regenerating forms and reports using all AD utilities Autoconfig, adctrl, adadmin, adpatch etc. Also worked with various Oracle Applications Utilities like Rapid Install, FNDCPASS, f60gen, CONCSUB etc.
- Apart from the above-mentioned tasks, daily monitoring is carried out before start of business to ensure database availability and smooth functioning of databases. Daily monitoring includes checking whether all databases are running, listener is running, concurrent managers are running, Unix error messages, disk space availability, checking for alert logs and trace files, checking for invalid objects etc.
- Worked with various Oracle Applications Utilities like Rapid Install, FNDCPASS, f60gen, CONCSUB etc.
- Planning and administering backup and recovery strategies.
- Have expertise in activities like maintaining instances, maintenance of file system and taking appropriate backups for security and consistency.
- Validating & Creating grants & synonyms on Apps schema, performed jar file/forms generation as a post patch step, relinking the Oracle apps programs.
- Setting up scripts in CRON to purge concurrent manager log and out files, database trace files periodically.
- Provided application support to users and created a log of all the problems with solutions for future reference.
- Worked closely with technical, functional teams and Oracle Support to troubleshoot and resolve issues during upgrade.
- Maintained and provided PROD support for EBS 11i Application and Database.
- Performing SYSADMIN activities like user maintenance and setting up profiles.
- Monitoring of Concurrent Managers and troubleshooting long-running concurrent programs.
- Providing DBA support during month end activities.
- Automation of DBA monitoring activities like purging older archive logs, concurrent manager log/out files, Gather schema statistics.
- Maintaining Databases including backups, restores, recoveries, imports, exports.
- Set up and administer tablespaces, data files, tables, indexes, views, sequences, synonyms and DB links.
- Good Experience on Oracle 10g new features like data pump, flashback tables, ASM, ADDM, AWR, etc.
- Applying patches in EBS 11i application.
- Perform weekly cloning activities of non-prod instances, both application and database.

- Responding to different types of alerts automation using oracle alerts.
- Configured Workflow Notification Mailer for inbound and outbound processing.

Environment: EBS R12, RDBMS 11g/10g, Red Hat Linux, RHEL 5.2, OEM, RAC, ASM, HP Kintana, EXADATA Oracle Linux, SQL*Plus, WebLogic, SOA Admin, crontab.

Client: Johnson Controls Inc., Milwaukee, WI
Role: Oracle EBS Apps DBA, Oracle DBA
Employer: Tata Consultancy Services

April 2011 – February 2014

Project Summary:

This project involves upgrading the EBS 11i Database from 10.2.0.3 to 10.2.0.5 and implementing OATM. Monitoring the EBS 11i application and databases, supporting the production and non-production databases and suggesting performance issues with the Oracle applications. Provide month end support. We managed IBS Application databases also.

Responsibilities:

- Involved in the Database design and deciding the requirements for migrating Database to new servers.
- Successfully upgraded Database from 10.2.0.3 to 10.2.0.5.
- Worked closely with technical, functional teams and Oracle Support to troubleshoot and resolve issues during upgrade.
- Involved in Oracle Applications Tablespace Management (OATM) as part of the upgrade.
- Migrating databases from PA-RISC environment to HP-UX Itanium.
- Performed the installation of oracle 10g RAC database and have good knowledge in basic concepts of RAC.
- Installed and configured GRID and ASM as part of the migration.
- Performed the conversion of non-ASM instance to ASM instance.
- Converting Database to 2-Node RAC.
- Migrating the database to VMAX file system.
- Maintained and provided PROD support for EBS 11i Application and Database.
- Performing SYSADMIN activities like user maintenance and setting up profiles.
- Monitoring of Concurrent Managers and troubleshooting long-running concurrent programs.
- Providing DBA support during month end activities.
- Automation of DBA monitoring activities like purging older archive logs, concurrent manager log/out files, Gather schema statistics.
- Maintaining Databases including backups, restores, recoveries, imports, exports.
- Set up and administer tablespaces, data files, tables, indexes, views, sequences, synonyms and DB links.
- Good Experience on Oracle 10g new features like data pump, flashback tables, ASM, ADDM, AWR, etc.
- Applying patches in EBS 11i application.
- Perform weekly cloning activities of non-prod instances, both application and database.
- Responding to different types of alerts automation using oracle alerts.
- Configured Workflow Notification Mailer for inbound and outbound processing.
- Provided application support to users and created a log of all the problems with solutions for future reference.

Environment: EBS 11i, RDBMS 11g/10g, HP-UX PA-RISC, RHEL 5.2, OEM, RAC, ASM, BMC Remedy

Client: CITI BANK, Kolkata, India
Role: Oracle EBS Apps DBA, Oracle DBA
Employer: Tata Consultancy Services

Mar 2010 - Mar 2011

Project Summary:

Citi, the leading global financial services company, has some 200 million customer accounts and does business in more than 100 countries, providing consumers, corporations, governments and institutions with a broad range of financial products and services, including consumer banking and credit, corporate and investment banking, securities brokerage, and wealth management. Citi's major brand names include Citibank, CitiFinancial, Primerica, Smith Barney, Banamex, and Nikko.

Responsibilities:

- Proactive monitoring of databases for table space sizes, monitoring database growth, setting system and object privileges, user logins and passwords.
- Creating and maintaining users.
- Involved in alert monitoring, space management issues and user management.
- Clone application and database tiers after patches are applied. With inputs from the implementation team (functional/technical), evaluate and implement patches/packs on required instances.
- Cloning of oracle database using cold backup and hot backup.
- Involved in SYSADMIN responsibilities like creating users, assign responsibilities and maintaining concurrent managers.
- Creating Shell scripts for automation purposes.
- Administering the tablespaces for better space utilization.
- Performed logical backups using export/import, data pump.
- Performance tuning of the Oracle database by enabling traces, tkprof, oradebug.
- Trouble shooting issues caused by wait event, resolving locks etc.
- Maintenance and development of database objects like Tables, indexes, Stored Procedure, constraints, triggers, DB links, users, roles, profile and SQL NET and Listener. Configured and managed databases on UNIX environment.
- Performed Application and database cloning in both 11i and R12 and resolved issues faced during or post cloning.
- Exposure in applying maintenance and family patches in Oracle Apps 11i as well as R12 environment.

Environment: Oracle 10g PL/SQL, SQL*Loader, Shell scripting, PVCS, Kintana, Oracle Applications 11i/R12
