PROFESSIONAL SUMMARY

Results-driven Software Engineer specializing in backend Java development, with a strong focus on building scalable microservices using Spring Boot. Proficient in Java 8, 11, and newer versions, with expertise in relational and NoSQL databases, ORM frameworks like Hibernate, and implementing secure authentication mechanisms such as JWT. Adept at applying SOLID principles, design patterns, and unit testing methodologies to deliver high-quality, maintainable code.

SKILLS

- **Programming Languages:** Java 8, 11+, Core Java
- **Frameworks & Technologies:** Spring Boot, Spring ORM (Hibernate), Microservices Architecture
- **Databases:** Relational (MySQL, PostgreSQL), NoSQL (MongoDB, Cassandra)
- **Design & Architecture:** SOLID principles, Design Patterns (Singleton, Factory)
- **Security & Authentication:** JWT, OAuth2, Secure API development
- **Testing:** JUnit, Mockito, Test-Driven Development (TDD)
- **Version Control & CI/CD:** Git, Jenkins, Docker, Kubernetes
- **Cloud Services:** AWS (Lambda, S3, DynamoDB), Azure

EXPERIENCE

Revature, - *Software engineer* June 2024 - Jan 2025

- Developed and maintained scalable microservices using Java 8 and 11 with Spring Boot, optimizing system performance by 30%.
- Built and refactored microservices-based applications, reducing technical debt and increasing modularity.
- Implemented Spring ORM (Hibernate) to manage relational data efficiently, reducing query execution time by 20%.

-
- Designed and secured REST APIs using JWT-based authentication, enhancing application security.
 - Applied SOLID principles and best coding practices to improve code maintainability and scalability.
 - Integrated relational (MySQL, PostgreSQL) and NoSQL (MongoDB) databases, optimizing data retrieval and storage.
 - Developed unit and integration tests using JUnit and Mockito, ensuring 95% test coverage.
 - Utilized design patterns such as Factory and Singleton to enhance code efficiency and reusability.
 - Managed CI/CD pipelines using Jenkins and Docker, reducing deployment times by 40%.
 - Deployed and managed applications on AWS, leveraging services like Lambda, S3, and DynamoDB.
 - Collaborated with cross-functional teams to implement scalable solutions, ensuring high system availability.

PROJECTS

Employee Reimbursement System (ERS):

Employee Reimbursement System (ERS)

A full-stack web application designed to optimize employee reimbursement management, ensuring security, efficiency, and compliance with enterprise standards.

- **Frontend:** Developed a responsive and intuitive UI using React, enabling seamless reimbursement request submissions and tracking.
- **Backend:** Engineered a scalable microservices-based backend with Spring Boot, optimizing data processing and inter-service communication.
- **Database Management:** Designed and implemented a secure PostgreSQL database with role-based access control (RBAC) for employees and managers.
- **Managerial Functions:** Integrated administrative tools that allow managers to approve/reject requests, manage user roles, and maintain system integrity.
- **Security & Performance:** Applied JWT-based authentication, conducted JUnit testing, and implemented Logback for real-time logging to enhance system security and reliability.

○

EDUCATION

East State Tennessee University, Johnson TN - *Masters Degree In
Software Engineering*

August 2022 - May 2024
