Ricky M Delarosa

SKILLS

Languages: Java, JavaScript, TypeScript, Python, C#, HTML5, CSS3
Frameworks: Spring Boot, Express.js, Angular, React, Node.js, REST API, GraphQL, Vue.js
Databases: MySQL, PostgreSQL, MongoDB, Redis
Platforms: AWS (Lambda, EC2, S3, RDS, DynamoDB, SNS, ECS), Microsoft Azure
DevOps Tools: Git, Jenkins, Docker, Kubernetes, Webpack, Babel, ESLint
Testing Tools: JUnit 5, Mockito, Cypress, Selenium, Jest, Enzyme
Other: Microservices Architecture, Agile/Scrum, CI/CD, OOP, TDD, DDD

SUMMARY

Senior Full Stack Engineer with over 12 years of experience crafting high-impact solutions in cloud-native environments. Adept at designing and implementing robust backend systems using Java, Spring Boot, and AWS, while leveraging Node.js for scalable microservices. I specialize in full-stack development with React and Angular, optimizing performance through REST APIs, GraphQL, and serverless architectures. Experienced in leading teams, migrating legacy systems to modern tech stacks, and ensuring scalable, secure, and user-focused applications. My approach blends deep technical expertise with a commitment to innovation, quality, and efficiency across the development lifecycle.

EXPERIENCE

Codebridge, Dover, DE – Senior Full Stack Engineer

May 2021 – December 2024

- Led the development of a cloud-based financial reporting platform using **Java 17** and **Spring Boot 2.5** for the backend, integrated with **AWS Lambda** for serverless computing.
- This allowed for efficient, on-demand financial data processing without provisioning or managing servers. Leveraged **AWS API Gateway** to manage API traffic to the Lambda functions, ensuring seamless scaling and secure access by 8%.
- The platform processes real-time financial data, allowing users to track metrics and portfolio performance. Incorporated **AWS SQS** for asynchronous task management and message queuing between microservices, improving system resilience during peak traffic periods by 13%.
- Designed and implemented **MongoDB** as a NoSQL database to store real-time financial data, enabling flexible schema design and high performance for data-intensive operations. Optimized queries for real-time analytics and implemented sharding for scalability to handle increasing data volume.
- Integrated MongoDB Atlas with AWS Lambda and Spring Boot, utilizing its built-in global distribution and backup capabilities to ensure data availability and

disaster recovery, and used MongoDB aggregation pipelines to process complex financial data for reporting dashboards.

- On the frontend, upgraded **React.js** from **v16** to **v18**, taking advantage of features like concurrent rendering, automatic batching, and Suspense for data fetching, which significantly boosted the platform's responsiveness and reduced load times by 23%. Additionally, **Material-UI v4** was upgraded to **Material-UI v5**, enabling a more modern and customizable UI, improving overall user experience.
- Designed and implemented RESTful APIs with Spring Boot, integrated with **OAuth2.0** for secure user authentication. These APIs were optimized for real-time data handling, scalability, and seamless communication between the frontend and backend.
- Used **Kafka** for managing high-throughput data streams, processing over 1 million events daily for real-time financial analytics. Built Kafka producers and consumers in both Java 17 and Node.js, integrating these components with **AWS MSK** (Managed Streaming for Kafka) for efficient stream processing.
- Collaborated closely with the **UX/UI team** to create a responsive, user-friendly interface using Angular 17 and Material-UI, ensuring consistency across devices and improving user retention by 18%.
- Focused on delivering high-quality software through extensive unit, integration, and performance testing. Utilized **Jest** and **Enzyme** for frontend testing to ensure comprehensive coverage of React.js components and functionalities. For backend services, employed **Spring Boot Test** to verify API endpoints and business logic.
- Enhanced the **CI/CD pipeline** using **Jenkins** and **GitHub Actions** for continuous integration and automated deployment to **AWS EC2** instances.
- Integrated third-party services, such as **Stripe** for payment processing and **Plaid** for financial data aggregation, to allow users to securely link their accounts and receive real-time financial updates.
- Refactored legacy monolithic code to a scalable microservices architecture using **Docker** and Node.js, supported by **AWS ECS** for containerized service orchestration. This transition enabled the system to handle a 50% increase in concurrent users with no performance degradation.

Quantum Metric, Colorado Springs, CO – Senior Full Stack Developer

June 2017 – April 2021

- Developed and maintained backend services for a large-scale e-commerce platform using **Java 11** and **Spring Boot 2.3**, and **Angular 6**.
- Designed and optimized **RESTful APIs** for key e-commerce features such as product management, order processing, and payment handling, ensuring that all services were scalable, maintainable, and responsive under high traffic conditions.
- Utilized **PostgreSQL 12** for transactional data storage. Designed and optimized complex queries for large product catalogs, user transactions, and order histories.
- Leveraged PostgreSQL indexing and partitioning strategies, reducing query execution times by 14% and improving the system's overall performance during peak periods, such as sales and promotions.
- Integrated **OAuth2** with **Spring Security** for secure user authentication and authorization.
- Utilized Hibernate and Spring Data JPA for seamless data access and persistence, enabling efficient management of complex financial data models. These technologies ensured reliable and optimized database interactions while simplifying the implementation of CRUD operations and complex queries.
- Implemented **Redis 6.0** as an in-memory caching layer to store frequently accessed data, such as user sessions, product details, and order statuses, reducing database load and improving response times by 32%.
- Designed and developed **Kafka** (version 2.4) event-driven architecture for real-time order processing, inventory management, and user activity tracking. Developed **Kafka** producers and consumers in Java.

- Migrated legacy monolithic services to a microservices-based architecture using Spring Boot and **Docker**, improving system flexibility, deployment speed, and uptime by 50%.
- In parallel, contributed to building backend services using **Node.js v12** and **Express.js** for certain microservices. These services were responsible for managing non-critical user-facing features such as user profiles, order history, and promotions.
- Collaborated with frontend teams, including Angular developers, to ensure seamless integration of Java backend services with the e-commerce platform's frontend.
- Optimized the flow of customer and transaction data by designing and implementing event-driven architectures that efficiently handled over 1 million events per day.
- Implemented unit, integration, and end-to-end testing using **JUnit 5**, **Mockito**, and **Cypress** for both backend services and frontend integration. Achieved 98% code coverage and used test-driven development to ensure the reliability of APIs, which led to a 40% reduction in production bugs after deployment.
- Actively participated in **Agile** processes, including sprint planning, daily stand-ups, and retrospectives.

Benevolent, Brooklyn, NY – *Java Full Stack Developer*

August 2014 – May 2017

- Developed and maintained backend services using **Java 8** and **Spring Framework** (Spring Boot 1.5, Spring Data JPA 1.11) to build robust, high-performance applications for a large-scale e-commerce platform.
- Designed and deployed **RESTful APIs** with **Spring Boot 1.5**, enabling efficient communication between backend services and the Angular frontend, improving data flow and enhancing user interactions by about 15%.
- Integrated **MySQL 5.7** with **Spring Data JPA** for data persistence, optimizing complex SQL queries and reducing data retrieval times by 30%.
- Implemented **Spring Security** for authentication and authorization with **JWT** (JSON Web Tokens) and role-based access control (RBAC), improving security and reducing unauthorized access by 19%.
- Refined backend performance by optimizing database queries and application logic, resulting in a 15% reduction in response times across key endpoints.
- Developed and maintained the frontend using **Angular 2+** (later upgraded to **Angular 4** during the tenure), creating dynamic, responsive user interfaces for seamless user experiences.
- Built reusable Angular components and services for modular development, which improved code maintainability, readability, and reduced development time by 20%.
- Used **RxJS** for managing asynchronous operations in the frontend, ensuring smooth data binding and responsive UI updates.
- Integrated frontend UI with backend APIs to handle real-time updates, enhancing the user experience and achieving a 30% improvement in user engagement.
- Collaborated with UI/UX teams to ensure user-centric design, resulting in a 25% improvement in overall customer satisfaction with the platform's user interface.
- Implemented **unit testing** for backend services using **JUnit 5** and **Mockito**, ensuring comprehensive test coverage (95%) and significantly reducing bugs and defects post-deployment by 15%.
- Integrated **E2E** testing using Protractor for Angular to simulate user interactions, reducing UI bugs by 24%.
- Worked in an **Agile/Scrum** environment, participating in daily stand-ups, sprint planning, and retrospectives to deliver timely feature updates and critical bug fixes.

Kyriba, San Diego, CA – Junior Full Stack Developer

June 2012 – July 2014

- Developed and maintained **Java 8** backend services using **Spring MVC 3** to implement financial features for a cloud-based treasury management system, enhancing platform functionality and supporting enterprise clients' complex treasury operations.
- Designed and deployed **RESTful APIs** to integrate core financial services, ensuring seamless communication between the backend and frontend components, and improving data consistency by 27%.
- Implemented secure payment processing through the **Stripe API**, streamlining financial transactions, reducing errors, and increasing transaction success rates by 10%, which led to improved client satisfaction.
- Integrated Java-based services with **AngularJS** to build dynamic, responsive user interfaces, improving user engagement and reducing frontend load times by 20%.
- Developed interactive UI components with AngularJS, enhancing usability and reducing friction for end-users when managing financial data.
- Improved database performance by optimizing SQL queries used for data retrieval in financial transactions, reducing query execution times and improving system responsiveness.
- Refactored legacy **PHP** code into modern Java Spring applications, improving scalability and maintainability. This transformation reduced technical debt by 23%, allowing for easier future development and reducing overhead costs related to platform maintenance.
- Collaborated with **UI/UX** teams to ensure user-centric design, enhancing platform aesthetics and usability, which contributed to a 25% increase in customer satisfaction.
- Wrote unit tests for Java-based services using **JUnit 4** and **Mockito**, ensuring high-quality code and increasing stability before deployment.
- Actively participated in the **Agile/Scrum** methodology, attending daily stand-ups, sprint planning sessions, and retrospectives to facilitate collaboration and drive timely project completion.

EDUCATION

Bachelor's Degree in Computer Science

San Jose State University – San Jose, CA

August 2008 – May 2012

CERTIFICATIONS

- Software Engineer (Advanced)
- Node.js (Intermediate)
- Frontend Developer (React)
- SQL (Advanced)
- JavaScript (Intermediate)
- Problem-Solving (Intermediate)
- Java (Basic)
