

Ryan Nelson

Senior Full Stack Engineer | C#, .NET, ASP.NET, React, Angular

Beaverton, OR | ryan_nelson306@gmail.com

SUMMARY

As a senior full-stack software developer with over 10 years of experience, I have a proven track record of delivering high-quality website, mobile, and desktop applications.

My expertise lies in writing full-stack solutions using C#, .NET, ASP.NET MVC, ASP.NET Core, WCF, WPF, Entity Framework, Web API, Knockout.js, JavaScript, TypeScript, Angular, React, and Azure services.

My experience extends to working closely with clients to understand their requirements, designing end-to-end systems that meet those requirements, and effectively communicating project progress to all stakeholders.

As an adept problem solver, I am able to troubleshoot and swiftly resolve issues that may arise during the project lifecycle.

Throughout my career, I have successfully implemented projects using iterative approaches, and have adopted AGILE and SCRUM methodologies for more efficient and effective project delivery.

My skills in deriving customer requirements, designing project schedules, setting milestones, and fostering effective communications make me an asset to any team.

I am passionate about software development and continuously stay up-to-date with emerging technologies and industry best practices.

EXPERIENCE

BRINKS HOME, MAY 2020 - PRESENT

SENIOR FULL STACK ENGINEER

Worked closely with designers and the product manager to develop and enhance several key features of the mobile, web, and desktop clients. My responsibilities included:

- Developing and implementing interstitials, tooltips, modals, and overlays utilizing tools such as Figma to improve the user experience.
- Conducting A/B testing on various client features to optimize their performance and usability.
- Enhancing the gamification data model libraries, including milestones, goals, and levels, to provide a more engaging and rewarding user experience.
- Developing and implementing functionality for gamification backend services and client-side optimistic updates.
- Developing a debugging tool for flow and onboarding experience management to improve the app's overall stability.
- Adding DataDog logging for performance testing and error handling in several areas for the Evernote mobile app, as well as the web and desktop clients.

Throughout these projects, I utilized a range of technologies, including ASP.NET Web API, EF, UOW, Swift, Git, TypeScript, C#, React, and React Native.

MOTIVE, SEPTEMBER 2018 - APRIL 2020

FULL STACK SOFTWARE ENGINEER

Had extensive experience in developing and designing complex software systems that meet specific business needs. In my previous role, I was part of a team of five engineers responsible for developing a Greenfield product. My key contributions included:

- Designing the product's architecture, including the client, multiple Microservices, APIs, and databases, with the goal of reducing manual task time to seconds.
- Successfully pitching a complete redesign of the Greenfield client app to management, ensuring timely delivery.
- Developing a Caching service that drastically improved data load times. Collaborating with database engineers to design a new ERD for the product and mapping it to legacy databases.
- Developing a nightly service that captured data from multiple legacy databases, processed it, and moved it to the new product schema.
- Adding online registration to str.com for report ordering with real-time integration to Salesforce, and playing a key role in the adoption of React and RabbitMQ within the organization.

Throughout the projects, I utilized a range of technologies, including React, Typescript, .NET Core WebAPI & Worker Services, C#, SQL Server, RabbitMQ, and Git.

GONET, JUNE 2014 - AUGUST 2018

FULL STACK DEVELOPER

I have gained extensive experience in designing and developing APIs and databases for a range of medium-sized projects. Additionally, I have contributed to several key initiatives, including:

- Serving as a member of a hand-picked team responsible for the Greenfield development of an app for Governor Haslam's cabinet. In this role, I designed and built the API and relational database, ensuring that the project was completed on time.
- Developing an algorithm to reconstruct roadway project contracts from change history logs, and building a front-end display for viewing contract history and comparing current and previous states.
- Creating .NET Core + Angular build definitions on TFS and working with DevOps to update Windows build & release servers to support .NET Core + Angular applications.
- Leading the technical team that rewrote and deployed an internal ASP.NET + AngularJS app into a .NET Core + Angular app.

Utilized a range of technologies, including AngularJS, JavaScript, Angular, TypeScript, C#, .NET Core, .NET Framework 4.5, and Microsoft SQL Server.

ALHENA TECHNOLOGIES, MARCH 2012 - MAY 2014

C#, .NET DEVELOPER

- Developed and implemented a component which helped to rapidly deploy rich interactive content subscription service through its ready-to-customize, television-Internet digital media management architecture (WinForms, C#, XML, Hibernate, Net 3.5).
- Architected, designed and developed application structure per Domain Driven Design and Test Driven Design patterns. • Implemented object-relational mapping using NHibernate for easy data manipulation.

- - Developed client and server modules, with remote patient data collection and real time remote status monitoring and management (WinForms, C#, XML, NHibernate, MS SQL .Net 3.5).
- - Planned and executed NUnit unit test plans to ensure all code changes meet requirements (C#, NUnit).
- - Took part in developing a user access control system to increase project's security level (C#, WinForms, .Net 3.5).

EDUCATION

GEORGIA STATE UNIVERSITY (April 2008 - September 2012)

Bachelor of Science - BS, Computer Science
