

SREEKUMAR SADASIVAN PILLAI
Visa status - US Citizen
(Phone : 516-784-7312)

Microsoft Certified Professional with Fifteen years of extensive experience in the design and development of .NET Core 2.1/2.2/3.2, .NET 6/7/8/9, Razor pages, MVC, ASP.NET Core Web API, ASP.NET REST API, Angular 7/8/12/14/15/16/17/18/19, Angular Material, Bootstrap 4/5, NG Bootstrap, Prime NG, iText, Telerik ASP.NET/Core MVC Controls, Azure Cloud, Azure Functions, Azure Dev ops, Telerik controls for ASP.NET , Azure blob storage, AWS, cosmos db, WPF Desktop and SSIS

SKILLS:

- **Languages:**
C#, TypeScript, VB.NET, Java, Python and Object Pascal.
- **Javascript Framework:**
Angular 7/8/12/14/15/16/17/18/19, Angular Material, Prime NG, NG Bootstrap and Bootstrap 4/5.
- **IDE:**
Visual Studio 2015/2017/2019/2012 and Visual Studio Code
- **Databases:**
SQL Server 2019/2015/2012/2008/2005, Oracle 10g. /8i, KDB, MongoDB, Interbase, Paradox and Advantage Database
- **Document Management System:**
Datastore from Hitec Laboratories Ltd. and IBM CMOD
- **ORM:**
Microsoft Entity Framework, NHibernate and IBATIS
- **Messaging:**
IBM Wbphere MQ, ZeroMQ, Tibco and BCTools
- **Reporting Tools:**
Power BI, Qlik Sense, SSRS and Business Objects.

PROFESSIONAL EXPERIENCE:

EPIC, NJ - Senior Developer

11/2021 - Till date

BIS: Application to create and track custom bonds for transportation of goods. The application interact with customs and border protection via IBM MQ messages. There is also an option to create manual bonds.

- Created a WebSphere MQ listener to listen the messages from CBP and save the messages to Cosmos DB using worker service in .net core.
- Created end API end points to upload voice messages to blob storage and built the Angular UI with Kendo Angular UI components. Developed dynamic data grids using Kendo UI for Angular with server-side pagination & sorting.
- Integrated Kendo UI Charts and Date Pickers to enhance data visualization.

- Created ASP.Net core web API end points to encode the bond details into message format and then sent it to CBP (Custom border and protection) message queue for processing.
- Used Telerik PDF API to generate dynamic PDF documents with ADOBE form fields.
- Extensively used kendo dropdown list, chart, menu, multi select...etc. to build the Angular UI.
- Created ASP.Net core web API end points to save the processed CBP messages to COSMOS DB.
- Created Web API end points to save the processed bond details to SQL Server database.
- Create Azure functions to automate jobs.
- Created Azure functions to upload JSON data via SFTP.
- Created Azure functions to generate and send Excel reports to surety customers with timer binding.
- Generated dynamic PDF documents and Excel reports using iText and EPPlus and Telerik API.
- Created pdf forms using adobe and dynamically filled form data using iText.
- Created Web API end points to interact with Angular UI.
- Used Angular Material components to create the Angular UI to manage different type of bonds.
- Implemented server side paging and connected the UI with Angular material mat-table and mat-paginator.

Tech Stack: Visual Studio 2022, C#, ASP.NET CORE, .NET 6/7/8/9, Angular Angular Material Components, Kendo UI Components for Angular, Web API, SQL Server 2018, Azure cloud services (App Service, Function App, etc.), iText, Azure DevOps and IBM WebSphere MQ.

Morgan Stanley, NY - Senior Developer
01/18 - 10/21

FA Notes : WPF Application to track the Loan/Bonus between Morgan Stanley and the financial advisors. It also populates the amortization schedule to track the risk involved. There are modules for calculating trailer fee compensation to affiliated and third party distributors of hedge fund and private equity funds.

- Extensively used, PRISM delegate events, dependency injection, Regions, Modules and Views.
- Created various PRISM modules for different screens and then communicated using aggregated events.
- The front-end GUI is developed using Developer Express WPF components.
- Threads are created wherever required using Async/Await and TPL libraries.
- Converted part of the application to Angular. Used Angular PrimeNG Table with server-side pagination, filtering, and sorting. Integrated PrimeNG Charts for real-time loan tracking. Customized PrimeNG Dialogs and Modals for user interactions.
- Exported the data to Excel format from Angular UI by using Web API calls.

Tech Stack: WPF, Developer Express WPF components, Angular 12, Visual Studio Code, Type Script,.NET Core 2.1, C#, ASP.NET CORE Web API, Visual Studio 2019, SQL Server 2012, LINQ, RXJS, Core, ASP.Net Web API, bootstrap, PrimeNG Angular components and Git.

Nomura , NY - Senior Developer**10/16 – 12/17**

Matrix: Real time WPF Trading application for Order management(OMS), User Coverage, Account Management and Alerts. The entire domain is divided into different applications and the communication between the application is achieved through the ZeroMQ messaging. Realtime communication, between the server and the WPF clients are implemented via the WCF Pub/Sub model. Changes in the orders are dynamically updated real time in the WPF UI.

Tech Stack: MS.NET Framework 4.0/4.5, WPF, Win Forms, WCF(Server Side), Developer Express WPF Components, NHibernate, ZeroMQ, C#, Visual Studio 2015/2013, SQL Server, Tibco, KDB, Task Parallel Library (TPL), MVVM, LINQ, PRISM and Developer Express WPF Components. Git.

Barclays Capital, NJ & NY - Senior Developer**05/2007 – 10/2016**

Created various WPF desktop Workflow applications for adjusting and overriding counter party, haircut percentage, structured repo, NRM and IFR data. Saved the uploaded documents during the workflow process to Oracle and then to CMOD after the approval process. Generated the XML files for FINRA and uploaded the validated xml files to FINRA website via the WPF desktop application. Configured Bctools to download counter party data to Oracle from IBM MQ messages. Created oracle stored procedure and map the same to MQ Messages using BCTools. Implemented Data Parallelism, using Task Parallel Library to create excel files, reading data from solr cache. Created WCF REST services, which were called from Angular JS. Implemented CORES to support domain calls.

Tech Stack: MS.NET Framework 4.0/4.5, WPF, WCF, Entity Framework, C#, Visual Studio 2010/2012, Oracle, Qlik Sense, IBM MQ, BCTools, Autosys, Unix Shell scripts, Task Parallel Library (TPL), Oracle, ODP.NET, .Net Reactive Extensions, MVVM, LINQ, Infragistics WPF Components, Component one(C1) charts PRISM and Perforce.

Societe Generale, NJ**07/09 – 04/11****Sr. Programmer Analyst****ALARM (Asset Liquidity Analysis Risk Module)**

ALARM (Asset Liquidity Analysis Risk Module) is a WPF desktop application for the RISQ Hedge Fund Monitoring Group to assess liquidity of Hedge Funds that impact the bank. The system manages a list of (selected) MASTER FUNDS. MASTER FUNDS are grouped into PORTFOLIOS. The objective of the application is for RISQ to assess the liquidity of hedge funds and alert or make necessary recommendations to the front office. Liquidity of a Hedge Fund is measured using a GPA (A, B, C, D) system, with A being the most liquid and D being illiquid.

Tech Stack: MS.NET Framework 3.5, C#, ASP.NET/AJAX, AJAX Control Tool kit, Visual Studio 2008, SQL Server 2005/2008, WPF, WCF, PRISM, Entity framework, MVVM, ADO.NET Expression Blend, Infragistics WPF components, Visual Source Safe and TFS.

Charles Schwab
10/08 – 07/09
Sr. Programmer Analyst

Street Smart is a real time Desktop WPF trading application for Charles Schwab's customers. Once logged in, the user will receive current position and balance information for their various accounts, as well as cost basis information. In addition the UI loads watch lists, charts, and other user settings. The user may invoke a Schwab.com session, and look at various market data streams, typically Level1, Level2, book data, news stories, indices, market analytic information, options, and some other data types. The user may invoke a Schwab.com session, and look at various market data streams, typically Level1, Level2, book data, news stories, indices, market analytic information, options, and some other data types. Using this enhanced desktop application, users can place and fill orders.

Tech Stack: MS.NET Framework 3.5, C#, MVVM, WPF Windows, XAML, Dynamic LINQ, Agile Methodology, Infragistics WPF Controls, Expression Blend, Custom Collections, Observable Collections, Visual Studio 2008, SQL Server 2005, WCF, Configuration Management – Visual Source Safe and TFS.

Weight Watchers, New York, NY
01/07-09/08
Sr. Programmer Analyst

This is an international e-Commerce web site for weightwatcher's customers to register and manage their weight related details. Once registered, the user can access the different tools to select their food and update their weight. The application will use scientific calculations to direct the users to achieve their weight goal. Addresses and credit cards are validated via CyberSource payment gateway. The application is localized for the countries – USA, Germany, UK, France, Netherlands, Australia and Canada.

Tech Stack: MS.NET Framework 1.1/2.0, C#, ASP.NET, Web Forms, Win Forms, ADO.NET, XML, XSL, AJAX, Atlas, Visual Studio 2005/2003, Web Service, Oracle 10g. ODP.NET, Visio 2003 and Borland Together .NET for UML creation and E-R Diagrams Design, Liquid Technologies XML – XML Data Binding, Configuration Management – CM Synergy.

EDUCATION:

- Master of Computer Applications (MCA) from University of Madras, India.
- Bachelor of Science (Physics) from University of Kerala, India.
