

SUKHENDAR REDDY

PROFESSIONAL SUMMARY

- **13+ years** of working experience in Design and Development of web applications using **Ruby on Rails**.
- In-depth knowledge of Object-oriented programming language **Ruby**.
- Extensive experience in designing and developing **RESTful** and **GraphQL APIs** for efficient data retrieval and seamless client-server communication
- Hands-on experience in **React.js** for building dynamic, responsive, and component-based front-end applications
- Experience in **HTML5, CSS3, and JavaScript** to build, style, and enhance user interfaces, ensuring a smooth and intuitive user experience.
- Strong database expertise in **PostgreSQL, MySQL, Oracle, and MongoDB**, optimizing queries and database structures for performance and scalability.
- Experience in writing the reusable code to follow **DRY** principle Expertise in background job processing using **Sidekiq, Resque, and Delayed Job** to manage asynchronous tasks and improve user experience.
- Extensively worked on automated testing frameworks such as **RSpec, Capybara** and **Cucumber** for comprehensive unit, integration, and end-to-end testing.
- Utilized **Hotwire**, integrating **Turbo** for seamless navigation and real-time updates, and **Stimulus** for dynamic client-side interactions.
- Skilled in continuous integration and delivery (**CI/CD**) pipelines using **Jenkins, GitLab CI, and Circle CI** for automated deployments and testing.
- Hands on experience in using **AWS** cloud and **Heroku**.
- Strong understanding of security best practices, including data encryption, secure authentication (**OAuth, JWT**), and protection against vulnerabilities (**SQL injection, XSS**)
- Proven track record of migrating legacy applications from older versions of **Rails 3.x** to modern **Rails 7.x** while ensuring backward compatibility and performance improvements.
- Excellent problem-solving skills with a focus on optimizing application performance and ensuring scalability for high-traffic systems.
- Experience with full **Software Development Lifecycle (SDLC)**, Architecting Scalable Platforms, Object Oriented Programming and Agile Methodologies.
- Good knowledge in working with automation testing tools and Bug tracking tools like **JIRA**
- Experience with error catch tool **Errbit**.
- Experience in source code version control tools **GitLab, GitHub** and **Bitbucket**.
- Communicative and a team player with experience in **cross-functional** teams, **Agile** ceremonies, working with **designers, QA**, and product managers.
- A highly motivated process-driven engineer who can learn fast and adapt to changes in a rapid manner.

TECHNICAL SKILLS

Languages

Ruby, Javascript, HTML, CSS, SQL

Databases

PostgreSQL, MySQL, Redis, MongoDB

API Development

RESTful APIs, GraphQL, JSON, OAuth, JWT

Version Control

Git, GitHub, GitLab, Bitbucket

Methodologies

Agile/SCRUM

Frameworks

Rails, RSpec, Capybara

Cloud Platforms

AWS (EC2, S3, RDS, CloudFront), Heroku

DevOps

Docker, Jenkins, Git, CI/CD pipelines

Testing

RSpec, Capybara, Cucumber, Selenium

Operating system

Linux, MacOS

PROFESSIONAL EXPERIENCE

SENIOR RUBY ON RAILS DEVELOPER / TECH LEAD

Shutterfly

May 2022 - Current

Spoonflower offers fabric, wallpaper and home decor, made to order using unique designs from independent artists worldwide.

Responsibilities:

- Designed and developed scalable and maintainable application architecture using object-oriented principles in Ruby on Rails.
- Provided technical support, diagnosing and resolving customer-reported incidents to ensure system stability.

- Created, administered, and maintained REST APIs in Ruby for seamless data exchange between systems.
- Utilized AWS services, including EC2, S3, and SQS, for server management, storage, and asynchronous messaging.
- Monitored application performance and health using AWS CloudWatch and New Relic.
- Maintained and enhanced existing applications by adding features to improve functionality and user experience.
- Resolved security vulnerabilities by applying patches and upgrading Ruby on Rails versions for compliance.
- Integrated and optimized database solutions using MySQL and PostgreSQL for performance and reliability.
- Implemented secure payment processing through the Braintree payment gateway.
- Integrated RESTful APIs with React for seamless front-end and back-end interactions.
- Coordinated with clients to gather requirements and executed successful production releases.
- Collaborated with cross-functional teams to design, develop, and test web applications in Agile/Scrum environments.
- Deployed applications using Continuous Integration/Continuous Deployment (CI/CD) pipelines for efficient releases.
- Conducted root cause analysis for critical production issues and implemented long-term solutions.
- Used Git for version control, facilitating team collaboration and source code management.
- Performed code reviews and recommended industry best practices to improve code quality.
- Designed secure, scalable, and modern code adhering to industry standards.

Technologies: Ruby 2.6.5, Rails 6.1, MySQL, PostgreSQL, Redis, Resque, React, AWS EC2, S3, SQS, New Relic, AWS Cloudwatch, Rspec, Puma, Git, Capistrano, CircleCI.

SENIOR SOFTWARE DEVELOPER

Standard Insurance Company, IBM.

Feb 2020 - May 2022

Electronic Billing Administration (EBA) is the system that is used by list-billed group insurance policyholders to administer their employee data and benefit plans. The EBA application provides capabilities such as Add Member, Add Benefits, Update/Terminate Member, Update salaries, View Transactions, and View Exceptions. It also supports the File Upload capability and API requests with member details. All these transactions will be updated to another system in a nightly batch cycle which runs every day. It is more like a transaction-based batch to other system. The downstream system calculates each employee's premium based on benefits selected for list billed group policies and generates the premium statements.

Responsibilities:

- Led the technical aspects of end-to-end solution delivery, including development, system integration, and customer acceptance for projects.
- Developed web applications using the Ruby on Rails framework integrated with Oracle and Postgres databases.
- Designed and implemented REST APIs for integration with upstream and downstream systems, utilizing Ruby for efficient and secure data exchange.
- Worked in an Agile/Scrum environment, contributing to sprint planning, retrospectives, and ensuring timely delivery of high-quality work in monthly iterations.
- Actively participated in unit testing, functional testing, debugging, and security implementations (Sonatype), with comprehensive documentation maintained in Confluence.
- Provided technical solutions for issue resolution, conducting root cause analysis for critical production problems, and implementing permanent fixes to recurring issues.
- Designed, maintained, and upgraded code, managing patches, code releases, and database migrations to enhance system functionality.
- Coordinated effectively with the offshore team and managed the JIRA dashboard for task tracking and issue resolution.
- Conducted peer code reviews on Git, ensuring adherence to best coding practices and code quality.
- Implemented model-level validation using Ruby, with a focus on enhancing web security and safeguarding application integrity.
- Improved application performance and stability, proactively identifying and addressing bottlenecks.
- Provided Priority 3/4 production support, resolving issues within SLA timelines to prevent business disruption for the client.
- Deployed applications to various environments using AWS EC2 instances, ensuring seamless transition between environments.
- Designed and implemented database architectures for robust application performance and scalability.
- Supported product migration efforts across various environments, ensuring smooth transitions and minimal downtime.

- Consistently worked with RSpec to write and maintain specs for functionality testing and code coverage.
- Developed Cucumber automation tests for end-to-end testing, improving test efficiency and accuracy.
- Collaborated with the QA team to ensure application stability and compliance with quality standards.
- Developed and managed background jobs using Resque and Redis to process data asynchronously, enhancing application responsiveness.

Technologies: Ruby 2.7, Rails 6.1, Oracle, Redis, Resque, Rspec, Cucumber, Capybara, HTML5, CSS3, JavaScript, Backbone.js, Bootstrap, Apache, Phusion passenger, Puma, Git, Capistrano, SOLR.

SENIOR SOFTWARE DEVELOPER

Markel Insurance, IBM.

Feb 2018 - Feb 2020

Centralized Billing Solution (CBS) is a flexible, user-friendly billing and cash management system designed to drive efficiency and deliver excellence across the entire P&C organization. Billing Center automates the billing life cycle. It enables flexible payment methods and processing and provides granular, third-party billing options. It enables digital service to policyholders and agents through integration with GuideWire Digital applications.

Responsibilities:

- Successfully designed, developed, and implemented an automation testing framework using Ruby Cucumber, enhancing testing efficiency and accuracy.
- Created, executed, and maintained Ruby automation scripts from scratch, establishing robust and reusable test cases.
- Developed Ruby scripts to send API calls and validate response data, improving the API testing process.
- Automated REST API calls and validated API responses using Ruby Cucumber, streamlining integration testing.
- Generated JSON request data for API calls to effectively simulate various test scenarios.
- Wrote Ruby scripts to connect directly to databases and validate database records, ensuring data integrity and consistency.
- Worked extensively with Ruby Cucumber gems such as Watir, Watir-WebDriver, and Spreadsheet to enhance testing capabilities.
- Analyzed and interpreted client requirement documents, translating them into effective test cases and automation scripts.
- Applied the Page Object Design Pattern to improve code management and reusability within the automation framework.
- Developed Ruby scripts to upload large Excel files for creating test policy data, facilitating comprehensive data testing.
- Collaborated closely with the business team to gather and refine requirements, ensuring alignment with business objectives.
- Implemented Cucumber scenarios for comprehensive end-to-end tests, covering critical user workflows.
- Configured Cucumber automation scripts to run across different environments, increasing test flexibility and coverage.
- Utilized Jenkins for Continuous Integration (CI) and Continuous Deployment (CD), automating build and deployment processes.

Technologies: Ruby, Cucumber, Watir webdriver, Capybara, SQL server, Jenkins, Git

SENIOR SOFTWARE DEVELOPER

Etiris Softech

Aug 2017 - Feb 2018

Responsibilities:

- Defined technical requirements based on business objectives, ensuring technical solutions effectively address business needs.
- Handled production maintenance requests, providing timely and effective technical solutions to resolve issues.
- Improved application performance by optimizing Ruby on Rails code and adopting industry best practices, enhancing system efficiency.
- Analyzed business needs and software requirements to determine the feasibility of designing applications using Ruby programming and the Rails framework.
- Created REST APIs using Ruby on Rails and MySQL databases, enabling seamless data communication between systems.
- Developed detailed requirement documents and formulated optimal solutions to address requirements and fixes, ensuring clear and effective implementation

SENIOR SOFTWARE DEVELOPER

Hirewire INC., Maisa Solutions.

Aug 2015 - Jul 2017

Hirewire is an on demand hiring marketplace where employers can connect with job seekers in real time. Employers can post jobs for free, and they can preview applicants. They need to pay if they want to schedule an interview. It has 7 major modules those are Employer and Jobseeker on-boarding, Jobseeker profile building (which include reviews, interview videos etc.), Search, chatting, Connections, Reporting Engine.

Responsibilities:

- Developed and implemented web applications using Ruby on Rails, contributing to the full software development lifecycle.
- Applied the DRY (Don't Repeat Yourself) principle through Ruby metaprogramming, resulting in more efficient and maintainable code.
- Modeled and designed databases using MongoDB, ensuring optimal data storage and retrieval strategies.
- Developed the Job Seeker Onboarding Forms module, enhancing the user experience for new platform users.
- Created the Job Seeker Profile Dashboard module, providing users with a comprehensive interface to manage their profiles.
- Implemented functionality to store uploaded videos by converting them to Base64 and storing them in Amazon S3 buckets, optimizing storage and accessibility.
- Generated various CSV reports for businesses to analyze, facilitating data-driven decision-making.
- Created REST APIs for mobile clients using Ruby on Rails with a MongoDB backend, enabling seamless mobile application integration.
- Implemented JWT (JSON Web Token) authentication for REST APIs, enhancing security and access control.

Technologies: Ruby, Rails 4.2, MongoDB, Java, Redis, Resque, HTML5, CSS3, JavaScript, jQuery, Materialize CSS, AWS EC2, AWS S3, Puma

SOFTWARE DEVELOPER

KidsLink INC., Maisa Solutions.

Sep 2011 - Jul 2015

KidsLink is an app for parents and schools to manage enrollment, documents, and communication. Parents will have a free KidsLink Profile with access to registration, payment, & updates. Automatic Alerts to request and notify parents of forms to be completed (e.g., medical forms and authorized pickups), eliminating many follow up phone calls. Parents can access their custom dashboard to capture, store, & organize all documents and "milestone" memories in one convenient and secure place.

Responsibilities:

- Designed the front-end of the application using HTML5, CSS3, JavaScript, and Bootstrap, creating responsive and interactive user interfaces.
- Redesigned and developed the website to improve user experience, adding new functionality using Ruby on Rails to enhance performance and usability.
- Worked with MongoDB databases to implement modules, ensuring efficient data storage and retrieval.
- Developed the parent dashboard and school's admin dashboards, providing intuitive interfaces for users to manage information effectively.
- Analyzed business requirements and participated in the development and testing of various modules, ensuring solutions met client needs.
- Implemented REST APIs using the Ruby on Rails framework, facilitating seamless communication between front-end and back-end systems.
- Integrated payment gateways for subscription services, enabling secure and efficient transaction processing.
- Configured automation scripts to deploy applications on AWS EC2 instances, streamlining the deployment process.
- Created cross-browser compatible and standards-compliant CSS-based page layouts, ensuring consistent appearance across different browsers.
- Utilized media queries to support the application on mobile devices and tablets, enhancing mobile responsiveness.
- Tested the website during development for usability, identifying and fixing bugs to improve user experience.
- Ensured the website front-end was free from errors or bugs, maintaining high-quality standards.
- Used Git for source code version control, effectively managing code changes and collaborating with the development team.

EDUCATION

Bachelor's Degree from JNTU, Hyderabad - 2011
