

SACHIN DALVE

AZURE DATA ENGINEER

+1 (845)-518-9397

sdalve1993@gmail.com

<https://www.linkedin.com/in/sachin-dalve-s5189397/>

SKILLS

- Automation
- Data Modeling
- Data Management
- DataOps
- Data Processing
- Data Governance
- Data Orchestration
- Spark streaming
- Spark
- Kafka
- ETL
- Data Warehousing
- Azure DevOps
- Azure Data Factory
- Azure Functions
- Azure Access Management
- Azure Storage
- Key-Vault
- Apache Iceberg
- Snowflake
- Teradata
- Oracle
- PostgreSQL
- DB2
- FLINK
- Google Analytics
- Trino
- SQL
- Python
- MySQL
- SQL SERVER MANAGEMENT STUDIO

CERTIFICATIONS

- Associate Data Engineer DP-203

EDUCATION

Master of Information
Technology

2021 - 2022

PROFILE

- Azure-certified Data Engineer (DP-203) with 10+ years of experience in building and managing large-scale, enterprise-grade data solutions across diverse domains.
- Expert in developing 200+ production-grade pipelines for real-time and batch processing, achieving 99.9% uptime and 98%+ data accuracy, supporting **analytics, BI, and ML use cases**.
- Proficient in **Azure Data Factory, Databricks, Synapse Analytics, Delta Lake, Azure SQL, Functions, DevOps, and Key Vault**, with hands-on experience in deploying governed, secure architectures.
- Architected data platforms using **medallion architecture** (bronze/silver/gold) and Lakehouse patterns to support modular, scalable analytics workflows.
- Designed CI/CD pipelines using **Azure DevOps and Terraform**, automating infrastructure provisioning, deployment, and versioning of data assets and pipelines.
- Skilled in DataOps, implementing automated testing, schema drift handling, and lineage tracking through **Purview, OvalEdge, and Azure Monitor**.
- Tuned Spark jobs** with adaptive execution, caching, partitioning, and Delta optimizations to improve pipeline performance and cost efficiency.
- Implemented **Change Data Capture (CDC) and schema evolution strategies using Delta Lake, Iceberg, and Stelo** to handle complex source system changes.
- Built utilities and frameworks for **data quality validation**, reducing manual intervention by 40% and increasing data reliability across systems.
- Demonstrated **leadership** by becoming the point of contact for issue resolution, architectural decisions, and pipeline governance across teams.
- Delivered solutions across domains like digital advertising (Google Ads), healthcare (claims processing, HL7, FHIR), and retail (Walgreens).
- Currently building self-driven, real-time data products with a focus on analytics entrepreneurship, combining product thinking with engineering execution.

WORK EXPERIENCE

Archkey Solution

2023 - PRESENT

Azure Data Engineer Consultant

- Design and implement database solutions in **Azure SQL Data Warehouse, Azure SQL**.
- Developed and orchestrated 200+ production-grade, three-tier data pipelines, processing 1M+ records daily. Integrated with downstream systems like **Power BI, Machine Learning models, and API endpoints**.
- Designed a Data Pipeline Assembly Application to proactively address **data quality** issues, delivering 98% clean data, reducing manual wrangling, and improving delivery timelines.
- Developed **Spark** applications using **Pyspark and Spark-SQL** for data extraction, transformation, and aggregation from multiple file formats for analyzing & transforming the data to uncover insights into the customer usage patterns.
- Utilize modern data engineering tools and frameworks such as **Apache Spark, Hadoop, and Kafka**
- **for large-scale data processing.**
- **Cleaned and standardized** health & safety inspection data across multiple divisions.
- Implement **data modeling** techniques to ensure the scalability and performance of data structures.
- ABPD & ARJC: Integrated **Azure SQL, ADF, and Databricks** for reliable cross-departmental analytics.
- Solved schema drift issues and enforced **CDC (Change Data Capture)** with **governance**.
- Implemented data governance protocols using **Azure Key Vault, RBAC**, and lineage tools like **OvalEdge/Purview**.
- Tuned performance through adaptive **partitioning, Delta caching, and schema evolution** handling, boosting **data availability** and refresh speed across teams.
- Architected and developed comprehensive **metadata management** for all tables in the data warehouse using **SQL Server Management Studio**.
- Established CI/CD pipelines with **Azure DevOps** to deploy and monitor **ADF + Databricks** assets seamlessly across environments.
- Served as the primary data engineering contact for internal stakeholders, improving issue resolution speed and cross-team collaboration.
- Implemented a **Medallion Architecture (Bronze → Silver → Gold layers)** to streamline data refinement, reduce redundancy, and enable reusable analytics models.
- Integrated **Azure Monitor and Log Analytics** to track pipeline health, auto-resolve failures, and reduce incident resolution time by 60%.

Google Operations Center

2019- 2020

Analytics Engineer

- Support the **Google Ads team** to design data solutions that enable forecasting of campaign performance, helping optimize future advertising strategies.
- Built robust **data pipelines** and transformation logic to ingest and process large volumes of ad performance data from multiple sources.
- Applied **predictive analytics** techniques and **statistical models** to derive campaign insights and future trend projections, supporting strategic planning.
- Developed **custom reporting dashboards** and **ad-hoc analysis tools**, improving visibility into ad metrics like impressions, CTR, conversion rates, and spend.
- Collaborated with cross-functional teams to **fine-tune forecasting models**, improving campaign performance **predictability** and budget allocation efficiency.
- Leveraged tools like **SQL, Python, BigQuery, and Looker** to ensure high-quality, real-time data delivery for operational use.
- Applied query optimization techniques (e.g., partition pruning, caching, materialized views) that reduced report generation time by 50% for internal stakeholders.
- Monitored data workflows using Looker dashboards and alerting triggers, ensuring data freshness SLAs and fast failure resolution.
- Collaborated with analytics teams to translate raw campaign data into actionable marketing KPIs, impacting budget decisions and real-time adjustments.

- Worked on enterprise data solutions for a Fortune 500 client, contributing to the design, development, and maintenance of robust ETL pipelines and data warehouse systems.
- Used tools such as Informatica, SQL Server, and Oracle to manage large-scale data ingestion and transformation tasks in alignment with client requirements.
- Played a key role in data cleansing, deduplication, and integration efforts, improving data quality across critical business functions.
- Supported reporting and business intelligence by creating automated data loads and building SQL-based data marts, enabling faster decision-making.
- Ensured compliance with data governance and client-specific SLAs, maintaining documentation and data dictionaries for audits and process traceability.
- Introduced parameterized workflows for flexible job orchestration, reducing maintenance and enabling faster deployment for recurring data loads.
- Implemented incremental data loading and surrogate key handling, significantly improving pipeline performance and data accuracy.
- Conducted performance tuning on long-running SQL queries and ETL jobs, reducing run times by up to 30% through index optimization and query refactoring.
- Created detailed data flow documentation and job-level metadata to support governance, traceability, and onboarding of new team members.
- Participated in cross-functional design sessions, aligning data delivery solutions with client reporting objectives and regulatory standards.

- Lead data operations and reporting efforts for Walgreens' pharmacy systems, focusing on data validation, reconciliation, and performance optimization.
- Supported ETL-style workflows by extracting and transforming transactional data across pharmacy, inventory, and claims systems for compliance reporting.
- Collaborated with cross-functional teams to deliver daily and monthly dashboards that tracked prescription volumes, turnaround times, and SLA adherence.
- Designed and automated Excel-based reporting solutions using advanced formulas and macros, streamlining operational workflows and reducing manual effort by 40%.
- Identified data quality issues through reconciliation logic and exception reporting, contributing to process accuracy and operational trust.
- Played a key role in maintaining data integrity and governance standards, working with U.S.-based teams to ensure compliance with healthcare data regulations.
- Mentored junior analysts on Walgreens-specific data flows, standard operating procedures, and process automation techniques.
- Conducted root-cause analysis and provided on-call production support, ensuring SLA adherence and minimum downtime across multiple business units.
- Trained and mentored junior analysts, introducing best practices for data quality checks, exception handling, and workflow optimization.
- Contributed to migration readiness by preparing SOPs, process maps, and test data scenarios as Walgreens moved select pipelines to cloud environments.
