

Sai Sandeep
Java Full Stack Developer
Email: saisandeepotluri02@gmail.com
Number: +1 940-305-2259

SUMMARY:

- Around 5 years of experience working as **JAVA FULL STACK** developer in requirement analysis, design, development, deployment, and maintenance of client/server applications along with Enterprise and Distributed applications.
- Extensive development experience specializing in environment building n-tier applications using **JAVA, J2EE, MVC Framework, Spring Boot, Spring, Hibernate, JavaScript, HTML/HTML5, CSS/CSS3, Angular JS, React JS, Oracle, SQL.**
- Hands on experience developing **Micro-services** using **Spring Boot** to build more physically separated modular applications which will improve scalability, Availability, Agility of application.
- Good understanding of OOPS concepts, **Collections, Exceptions Handling, Input/output (I/O) System, Annotations, Concurrency, Multi-Threading, Lambda and Generics.**
- Expertise in **XML, SAX, DOM, SOAP web services, WSDL and Restful web services.**
- Experience with features of **Angular 15** such as directives, dependency injection, modules, and routing.
- Extensive experience in developing **Web interfaces** using **HTML5, CSS3, Bootstrap, SASS, LESS, JavaScript, jQuery, Angular-JS.**
- Good knowledge on **Amazon Web Services (AWS), Amazon Cloud Services** like **Elastic Compute Cloud (EC2), Simple Storage Service(S3), Amazon Simple DB, Amazon Cloud Watch, SNS** and experienced in building highly scalable java applications using various architectures.
- Involved in developing testing frameworks such as **JUnit, Mockito, Cucumber** and **Selenium** for **Test Driven Development (TDD).**
- Experienced in Agile methodologies like **Scrum** and **Extreme Programming (XP)**, and Agile practices like **Continuous Integration** and **Test-Driven Development (TDD).**
- Worked on **Code Optimization & Performance Tuning** of various applications.
- Hands-on experience in using **Eclipse, SLF4j, Log4j, JUnit, Mockito** for building, logging, testing **JTest** for Performance Testing.
- Extensively utilized **Spring MVC Framework, JSP, JSF**, for creating User interface modules.
- Proficient in utilizing social databases **Oracle, MySQL, SQL Server** and composing complex SQL, **PL/SQL** programs. Great comprehension of **NoSQL** databases like **MongoDB.**
- Good working knowledge in Single Page Applications (**SPA**) using JavaScript frameworks like **Angular JS, React.js.**
- Good experience working with **Continuous Integration and Deployment (CI/CD)** tools like **Jenkins, Docker.**
- Worked on CI/CD tool Jenkins to automate the build process from version control tool into testing and production environment.
- Experience with container-based deployments using **Docker**, working with **Docker images** and **Docker Hub.**
- Used Kubernetes to orchestrate the deployment, scaling, and management of **Docker** containers.
- Expert in version control tools like **Git** and **SVN.**
- Excellent written and verbal communication skills, presentation, and problem-solving skills.
- Good team player and can work in both **Agile (Scrum)** and **Waterfall environments.**

EDUCATION:

- **Master of Science in Computer Science from Texas State University, USA.**

TECHNICAL SKILLS:

Language	Java 17, Java 11, Java 8, C, C++, SQL, PL/SQL, JavaScript, Typescript
Application Servers	Web logic 10.3.4/9.0/7.1/6.1, IBM Web Sphere 8.x/6.x/5.x
Technologies	Servlets, JDBC, Vert.x, JSP, Struts, Hibernate, Springboot, IOC, AOP, MVC, JSON, JMS, MQ, JBOSS, ORM, Angular v15
Web Servers	Rest, SOAP, Apache-Tomcat
Web Technologies	HTML, JavaScript, AJAX, JQUERY, Angular JS, CSS3, HTML5, XHTML, DHTML, React JS, Bootstrap
XML Technologies	XML, DOM
Database	Oracle 9i/10g/11g, PL/SQL, MySQL, Postgresql, SQL Server 2008, Prestodb, Hive, Mongoddb (No SQL)
Build Tool	Ant, Maven, Gradle, Jenkins
Testing	Junit, QUnit, JMock, Karma, Jasmine
IDE Tools	Eclipse, IntelliJ, Atom, WebSphere, Dreamweaver
Version Control	GIT, SVN, CVS, Docker
Cloud Technologies	AWS (S3, Lambda, EC2, RDS, IAM, Cognito, EBS, Cloudwatch), Unix, Azure (Azure Functions, Azure SQL Database, Azure App Service, Azure Active Directory)
Operating Systems	Windows, Mac OSX, Linux, Unix

PROFESSIONAL EXPERIENCE:

Client: 7-Eleven, Irving, TX

April 2024- To Present

Role: Java Full Stack Developer

Responsibilities:

- Followed Agile/SCRUM methodology, involved in analysis, design, coding, and unit testing of business applications in a fast-paced environment.
- All the functionality is implemented using **Spring IO** / **Spring Boot** and **Hibernate ORM**. Created the build, deployment, and configuration related scripts for Maven.
- Utilized **Hibernate** and **SQL** for communication with **MongoDB**.
- Built Spring Boot **microservices** for the delivery of software products across the enterprise.
- Decompose existing monolithic application into multiple microservices using spring boot and Kafka.
- Used Micro services to communicate using synchronous protocols **HTTP** and **REST** for implementing **SOA** approach.
- Implemented Test-Driven Development and created comprehensive technical design documents, resulting in a robust application and a significant increase in test case coverage.
- Designed browser-compatible pages using **JQuery**, **JavaScript**, and **Angular**, which enhanced cross-browser functionality and user experience.
- Integrated business components with the Spring framework and maintained MVC architecture consistency, leading to a more cohesive and scalable application.
- Leveraged HTML5, JavaScript, AWS, and vendor REST APIs to improve binary media file uploads, achieving faster upload times and enhanced user satisfaction.
- Adopted a Microservices architecture with SOAP, WSDL, XML, and Spring Boot, which modernized infrastructure and improved service interoperability.
- Crafted complex directives, services, controllers, and filters within the AngularJS MVC framework, streamlining client-side operations and interface responsiveness.
- Worked with Vert.x to build reactive applications and microservices, leveraging its event-driven architecture to achieve high performance and scalability.
- Implementation of Spring Restful web services which produces **JSON**.
- Migrating existing application into micro services architecture using **Rest APIs**, **spring boot**
- Used **Node.js** APIs for authentication and authorization.
- Created POC of Authentication and Authorization with Oauth2 **Spring Boot** microservice. Utilized **JWT** as tokenization scheme for **Oauth2**.

- Designed **Java API** to connect the **Amazon S3** service to store and retrieve the media files.
- Extensively worked on front end, business, and persistence tiers using the **spring framework**.
- Involved in designing and implementation of **MVC design** pattern using spring framework for Web-tier.
- Developed applications in Java based UI within **Angular 15**, and **Node.js**, integrated with **Typescript**.
- Developed custom components for CDC with **J2EE**, **Springboot 3**, **Hibernate** and **Java17**. Designed components to extract and load data from EPA website utilizing **Spring** and **Hibernate**.
- Used **Jenkins** pipelines to drive all micro services builds out to the **Docker registry** and then deployed to **Kubernetes**, created **Pods**, and managed using **Kubernetes**.
- Followed **agile** software development practice paired programming, test driven development and scrum status meetings.
- Worked extensively on **Spring boot** for building web services.
- Used **JavaScript**, **jQuery** for user interactions in pages. Creating a responsive web application integrating Twitter Bootstrap with **Angular 15** and media queries.
- New library development with micro services architecture using **REST API's**, **Spring Boot** and implemented Vert.x Web for creating HTTP servers and handling web requests efficiently.
- Worked on **Angular 15** as main front-end framework using features like components, pipes, modules, custom directives, templates, data binding, dependency injection, routing and **Angular CLI**.
- Worked on creating various types of indexes on different collections to get good performance in **Mongodb**.
- Implemented to reprocess the failure messages in **Kafka** using offset id.
- Leveraged Vert.x event bus for inter-service communication, ensuring non-blocking and responsive interactions.
- Have knowledge on partition of **Kafka** messages and setting up the replication factors in **Kafka Cluster**.
- Involved in unit testing of core functionalities using **Junit**.
- Performed code review and unit tested the application using **Junit** framework. Participated in the **production support** and maintenance of the project.
- Developed **API** for using **AWS Lambda** to manage the servers and run the code in **AWS**.
- Selecting the appropriate **AWS service** based on **compute, data, or security** requirements.
- Experience in Integration of **Amazon Web Services AWS** with other applications infrastructure.
- Used **log4j** to print the logging, debugging, warning, info statements.
- Performed check-in and check-out and review using pull requests with **GIT version control** system.

Environment: Java 17, Spring 3.5, Spring MVC, Spring Security, AWS (EC2, S3, IAM), Hibernate 4.0, Rest, JSP, HTML, CSS, Java Script, OpenShift, Cassandra, RabbitMQ, Datadog, Junit, Mockito, Angular 15, AWS, Node.js

Client: Elevance Health, IN

Jan 2023 -Mar 2024

Role: Java Developer

Responsibilities:

- Engaged in all phases of **SDLC** in involving specifications, gathering Requirements, Designing, Coding, Testing, Deploying, and Maintaining in implementing projects. Participated in **Scrum** related activities and daily stand-up meetings following **Agile Methodology**.
- Used **J2EE** technologies such as **Spring 4.0 framework** and Implemented the **Spring MVC** and **Spring Core Annotations** for Dependency Injection (**DI**). Developed our application using features **Spring Boot**.
- Used **MYSQL** as the **backend database** and involved in design of the database schema and development of Stored Procedures.
- Developed web applications within a Microservices architecture using Spring Boot, leading to an enhanced modular infrastructure and scalable solutions.
- Elevated RESTful web services in the Spring Framework, utilizing Collections to improve system efficiency and response times.
- Addressed UI challenges by employing JavaScript, React, and Redux, resulting in improved user engagement and interface functionality.
- Coordinated RESTful Microservices using Java JDK and Scala with Oracle databases, achieving seamless data interchange and optimized storage solutions.
- Converted automation scripts to a new Selenium framework, and utilized AWS for deployment, ensuring

consistent coding standards and reliable product deliveries.

- Adhered to Agile methodologies in a fast-paced sprint environment, and employed Cucumber for BDD testing, leading to streamlined development cycles and enhanced code quality.
- **Spring Boot** Microservices were developed with Microservice architecture using **REST** and **Apache Kafka**.
- Deployed the application on **Amazon Web services (AWS)** and used it to provide a large computing capacity for scalable solutions.
- Extensively used core **Java** concepts like **Collections Framework**, and **Exception Handling**, **I/O System**, **Multi-Threading**, **JDBC**, **Generics**.
- Used **Java8** features in developing the code like **Lambda expressions**, **creating resource classes**, fetching documents from database.
- Developed reusable and inter-operable Web service modules based on service-oriented architecture (SOA) by using **RESTful** services.
- Developed the persistence layer using ORM tools like **Hibernate** Framework, performed mappings in **Hibernate** files.
- Proficient with container systems like **Docker** and container orchestration like **EC2 Container Service**, **Kubernetes**, worked with **Terraform**.
- Enhanced Legacy Applications by building new components in **Angular 11** with **REST** wrapper around the existing Backend Java services and developed custom directives, factories, and services.
- Used various **Angular** custom directives and developed reusable components and templates that can be re-used at various places in the application.
- Managed **Docker orchestration and Docker containerization** using **Kubernetes**.
- Used **Kubernetes** to orchestrate the deployment, scaling, and management of Docker Containers.
- Written **JUNIT** tests as per the use case and used **Mockito** framework to confirm the expected results.
- Developed test scripts in **Selenium** Web Driver using **Java** Language, setting up the automatic build and deployment automation of project by using **Maven**.
- Deployed applications into Continuous integration environments like **Jenkins** to integrate and deploy code on CI environments for development testing.
- Involved in raising questions for business, Issue/bug tracking monitoring of work assignment in the system is done by **JIRA**.
- Used **Log4j** for Logging various levels of information like error, info, debug into the log files.

Environment: Java JDK1.8, AWS, HTML5, CSS3, JavaScript, Kubernetes, Docker, Angular 11, Microservices, Restful Web Services, Kubernetes, Hibernate, Spring Boot, Spring MVC, MySQL, Maven, Jenkins, Selenium, Jira, Log4J, Junit, Git.

Client: L&T, Hyderabad, India
Java/J2EE Developer

Aug-2019 -July 2021

Responsibilities:

- Involved in **SDLC** Requirements gathering, Analysis, Design, Development and Testing of application developed using agile methodology.
- Used **Spring MVC** and Dependency Injection for handling presentation and business logic.
- Involved in creating the Hibernate **POJO** Objects and mapped using Hibernate Annotations.
- Implemented **Spring JPA** Repository for the persistence layer of the application (this layer communicates with the application **DB - Oracle DB**).
- Analyzed system requirements and developed a Spring-MVC web application, enhancing dependency injection which streamlined configuration management and service responsiveness.
- Employed security measures using Spring Boot Auth to generate JWT tokens, significantly improving the OAuth2 authentication and authorization processes.
- Designed the presentation layer with JSP, HTML, CSS, and JavaScript, resulting in a user-friendly and responsive frontend that increased customer satisfaction.
- Facilitated data access through Hibernate ORM, optimizing the Data Access Layer and ensuring efficient

database interactions.

- Created a complex backend framework and engaged in database programming with JDBC and SQL, achieving robust data processing and integrity.
- Led Continuous Integration efforts with Jenkins, integrating with GitHub and Maven, which contributed to consistent code quality and streamlined software delivery.
- Use **Spring MVC** with Annotations in integrating different layers within the application.
- Data Operations were performed using **Spring ORM** wiring with Hibernate.
- Extensively used JSON to parse the data from server side to satisfy the business requirement.
- Implemented features like logging, session validation using **Spring AOP** module and **Spring IOC**.
- Extensively worked on developing **REST** based **Webservices** and consumed them as needed.
- Consumed **JSON RESTful Web** Services and sent responses with **Spring MVC**.
- Configured **Kafka** to handle real time data. Implemented Kafka producer and consumer applications on Kafka cluster setup with help of Zookeeper.
- Used combination of **REST** and **Apache Kafka** message brokers to produce and consume centralized spring Restful web services in **JSON** format.
- Developed **DAOs** layer using Cassandra big database and implemented **RESTful** web services that persists high-volume of data.
- Used **Maven** build tool for creating **JAR** files and automate the process of building **Docker** Images and pushing them to **Docker** Private Registry.
- Worked on automated deployment tool using **Kubernetes** to deploy quickly and predictably.
- Also used Kubernetes to orchestrate the deployment, scaling, and management of **Docker** Containers.
- Worked on deploying the applications in **AWS** as **EC2** instances and create snapshots for the EBS volumes.
- Used **AWS SDK** for connection to Amazon S3 buckets as it is used as the object storage service to store and retrieve the media files related to the application.
- Created reusable components and services to consume **RESTAPIs** using component-based architecture with Angular 6.
- Implemented **Angular** 6 services to connect the web applications to the back-end API
- Integrated the UI components **using JSP, HTML, CSS, JavaScript, and AngularJS**.
- Followed Scrum/Agile methodology with daily meetings to keep track of the progress and issues pertaining to the projects.

Environment: Spring, Spring MVC, Spring JPA Repository, Spring ORM, Spring AOP, Spring IOC, Spring Security, Hibernate, Apache Kafka, ELK Stack, Docker, Kubernetes, AWS, Angular 6, JSP, HTML, CSS, Java script, AngularJS, JUnit.
