

SAI SANTOSH KUMAR DWARAPUREDDY

Sr Cloud DevOps Engineer

Phone: +1(210) 504-7977

Email: saisantoshdwarapureddy123@gmail.com

ABOUT ME

Overall 10+ years of IT experience in DevOps implementation, cloud computing, systems administration, testing, migration, change management, software configuration management (SCM), and build & release engineering. Skilled in building highly available, scalable, and secure cloud infrastructure across AWS and Azure platforms, with deep expertise in continuous integration and delivery (CI/CD), automation, and DevSecOps practices. Proficient in both Windows and Linux environments, with hands-on experience supporting mission-critical deployments across hybrid and multi-cloud infrastructures.

PROFESSIONAL SUMMARY

- ✓ Written custom build and release definitions in Azure DevOps using YAML pipelines to enable seamless deployments across Azure and on-premises environments.
- ✓ Implemented unit testing frameworks and code coverage metrics in Azure DevOps to ensure high code quality and maintainability.
- ✓ Automated ETL processes and data lake operations using Azure CLI scripts for batch data ingestion and storage optimization.
- ✓ Hands-on experience in system builds, server provisioning, installations, upgrades, patching, migration, troubleshooting, backup/recovery, and performance tuning on Red Hat Linux systems.
- ✓ Deep expertise in cloud infrastructure automation using AWS, OpenStack, Terraform, Ansible, Puppet, Jenkins, Chef, Maven, SVN, GitHub, WebLogic, Tomcat, and JBoss.
- ✓ Strong experience in architecting and operationalizing large-scale analytics and data warehouse solutions using Snowflake.
- ✓ Orchestrated multi-stage deployments for complex applications using Harness, streamlining delivery and rollback processes.
- ✓ Proficient in middleware and application server technologies including WebLogic, WebSphere, JBoss, Apache, Tomcat, and integrating security throughout the SDLC for both cloud and on-prem deployments.
- ✓ Experienced with the Atlassian tool suite, including Jira, Confluence, Bitbucket, Bamboo, and Crowd for collaboration and lifecycle management.
- ✓ Knowledgeable in IAM compliance requirements and implementation aligned with HIPAA, PCI DSS, and SOC 2 standards.
- ✓ Performed VM backup and recovery using Azure Recovery Services Vault with PowerShell and Azure Portal.
- ✓ Administered SonarQube servers including installation, configuration, and upgrade management to improve code quality.
- ✓ Designed scalable, fault-tolerant microservices using Golang, Docker, and Kubernetes, with a focus on performance and resilience.
- ✓ Deployed and managed Kubernetes workloads across development, staging, and production environments; enabled efficient pipeline workflows via Docker containerization.
- ✓ Designed deployment pipelines using Harness, reducing manual effort by 80% and accelerating release cycles.
- ✓ Built custom Kibana dashboards and visualizations to analyze application logs and monitor trends in real time.
- ✓ Created comprehensive Grafana dashboards and alerts to monitor system performance and infrastructure health.
- ✓ Extensive hands-on experience configuring and tuning web servers like Nginx, Apache, and Tomcat for optimal performance.
- ✓ Installed and managed Jenkins for CI workflows and Nexus for artifact repository management across environments.
- ✓ Developed configuration management solutions using Node.js for consistent application setup across environments.
- ✓ Coordinated infrastructure changes across network, compute, and storage components, ensuring minimal downtime and disruption.
- ✓ Well-versed in business continuity planning (BCP), SOX compliance, security audits, and using governance tools like RSAM and Archer.

- ✓ Conducted IAM audits and remediated access issues, strengthening identity and access management posture across enterprise environments.

CERTIFICATIONS

- ✓ Certified Azure Administrator.
- ✓ Certified AWS Developer – Associate.
- ✓ Certified Kubernetes Administrator.

EDUCATION

- ✓ Bachelors in computer science Jawaharlal Nehru Technological university, India.
- ✓ Masters in computer science Texas A&M University.

TECHNICAL SKILLS

Automation Tools	Jenkins, Chef, Puppet, Ansible, Docker, Kubernetes (AKS, EKS, GKE), Vagrant, Terraform, AWS CDK, CloudFormation, Hudson
Cloud Platforms	Amazon Web Services (AWS), Microsoft Azure, Google Cloud Platform (GCP), OpenStack, Pivotal Cloud Foundry (PCF)
Database Systems	Cassandra, Oracle DB2, Microsoft SQL Server (MSSQL), MySQL, MongoDB, Amazon RDS, DynamoDB
Version Control tools	GitHub Actions, GitLab CI, ArgoCD, FluxCD, Subversion (SVN), Bitbucket, Gerrit, CVS, IBM ClearCase
Web Servers	Apache Tomcat (5.x/7.x), Apache HTTP Server (2.x/3.x), Red Hat JBoss (4.x/5.x), WebLogic (8.x/9.x/10.x), WebSphere (4.x/5.x), Nginx, IIS, Azure App Services, Red Hat Satellite, TFS
Networking/Protocol	TCP/IP, DNS, DHCP, NIS, NFS, WAN, LAN, SMTP, FTP/TFTP, Cisco Routers & Switches, Juniper Networks
Scripting/Languages	Bash/Shell Scripting, Python, Go (Golang), Perl, Ruby, PowerShell, PHP, YAML, JSON
Virtualization Technologies	VMware ESX/ESXi, Microsoft Hyper-V, IBM PowerVM, Oracle VirtualBox, Citrix Xen
Application Servers	WebLogic Application Server (9.x/10.x), Apache Tomcat (5.x/7.x), Red Hat JBoss (4.22)
Volume management	VERITAS Volume Manager (VVM), Linux Logical Volume Manager (LVM)
Monitoring Tools	AWS CloudWatch, AWS CloudTrail, New Relic, Elastic Stack (Elasticsearch, Logstash, Kibana - ELK), Splunk, Nagios
Operating system	Linux (Red Hat 4/5/6/7, CentOS, SUSE), Ubuntu (12/13/14), Solaris (8/9/10/11), HP-UX (11.0/11.11/11.23/11.31), Windows Server
Observability & Monitoring	Prometheus, Grafana, Datadog, OpenTelemetry

PROFESSIONAL EXPERIENCE

Client: Jenius Bank, Los Angeles, CA(Remote).

April 2023 – Till now

Role: Sr Cloud DevOps Engineer

Project Title: Cloud Infrastructure Automation & DevOps for Jenius Bank

Project Description:

Led the automation and optimization of Azure cloud infrastructure using Terraform, Kubernetes (AKS), and robust CI/CD pipelines. Architected scalable, secure deployments leveraging Docker, GitLab, Nexus, and SonarQube. Implemented Azure IAM, RBAC, and auto-scaling to enhance security and efficiency. Integrated Azure IoT Hub for device fleet management and deployed Prometheus/Grafana for full-stack observability. Achieved a 60% improvement in deployment velocity while ensuring high availability, compliance, and streamlined cloud operations.

Responsibilities:

- ✓ Developed automation scripts using Shell and Python to eliminate manual tasks, streamline deployments, and support app versioning across environments.
- ✓ Managed Kubernetes workloads across AWS EKS, fine-tuning configurations for performance and reducing operational overhead.

- ✓ Designed infrastructure as code (IaC) solutions using Terraform to provision Azure resources reliably and at scale.
 - ✓ Built CI/CD pipelines using GitHub Actions and GitLab, enabling automated testing, integration, and multi-environment deployments.
 - ✓ Integrated ArgoCD for GitOps workflows, enabling version-controlled, declarative deployments and reducing deployment errors.
 - ✓ Configured observability stacks including Prometheus, Grafana, and Datadog to enable proactive monitoring and rapid incident response.
 - ✓ Implemented DevSecOps by integrating static and dynamic security scanners into CI/CD pipelines, proactively reducing vulnerabilities.
 - ✓ Automated infrastructure provisioning in AWS with Terraform, CloudFormation, and AWS CDK to maintain consistency and scale.
 - ✓ Consolidated workloads across multiple AWS accounts and EKS clusters, optimizing compute resources and cutting costs.
 - ✓ Created system automation tools in Python and Go to manage deployments, monitoring, and routine maintenance tasks.
 - ✓ Worked with architects and platform teams to align infrastructure design with long-term enterprise architecture goals.
 - ✓ Championed an “Everything-as-Code” model to enforce consistency and enhance reusability across cloud resources.
 - ✓ Led cross-functional efforts to implement highly available, auto-scaling cloud-native architectures using Kubernetes and Terraform.
 - ✓ Managed Azure IAM configurations via portal and CLI, assigning secure access to development and operations teams.
 - ✓ Created and deployed Helm charts for GCP workloads to configure services, deployments, and ingress with YAML manifests.
 - ✓ Built robust alerting with Prometheus and Grafana to ensure operational SLAs and fast incident triaging.
 - ✓ Registered custom domains and managed DNS routing using Azure DNS zones for production-ready application URLs.
 - ✓ Collaborated with dev and QA teams to refine release processes and improve handoffs across environments.
 - ✓ Used cron jobs on Linux hosts for automating build synchronization and routine app maintenance tasks.
 - ✓ Delivered robust CI/CD pipelines in Azure DevOps for automated integration and delivery with approval gates and rollback strategies.
-
- ✓ Authored Terraform modules for building resource groups, AKS clusters, storage accounts, Event Hubs, and IoT Hubs across environments (Dev, Staging, Prod, DR).
 - ✓ Designed microservices CI/CD workflows using GitHub Actions, cutting deployment times by over 50%.
 - ✓ Integrated Java services with external systems via Apache Camel and Spring Integration for seamless cross-platform data exchange.
 - ✓ Built and orchestrated scalable ML pipelines using AzureML for data ingestion, model training, validation, and production deployment.
 - ✓ Tracked defects, stories, and sprint tasks using JIRA, maintaining visibility and accountability across sprints.
 - ✓ Automated software delivery using UrbanCode Deploy, ensuring reliable, repeatable deployments across all environments.
 - ✓ Provisioned AKS clusters using Terraform and ARM templates, managing scaling, upgrades, network, and security policies.
 - ✓ Developed Terraform templates to provision AKS, Cosmos DB, containers, IoT Hub, Event Hub, and other key components.
 - ✓ Set up Grafana alerts for key metrics to maintain proactive operations and minimize downtime risks.
 - ✓ Optimized Kafka clusters by tuning broker, topic, and partition settings to increase throughput and reduce latency.
 - ✓ Administered AKS clusters with fine-grained control over scaling, upgrades, networking, and RBAC policies.
 - ✓ Conducted security assessments on ML pipelines and implemented remediations based on audit findings.

- ✓ Built complex dashboards using Grafana and Kibana to visualize system health, user behavior, and security events.
- ✓ Used Kibana Query Language (KQL) to filter and aggregate logs across distributed sources.
- ✓ Maintained backup and disaster recovery strategies for Kafka using MirrorMaker to ensure business continuity.
- ✓ Refactored Golang services for scalability, improved memory usage, and lower runtime latency.
- ✓ Developed GitOps workflows using Argo CD for seamless deployment and rollback of Kubernetes apps.
- ✓ Built and deployed Docker containers to AKS, optimizing base images and layer caching to boost performance.
- ✓ Led Azure infrastructure planning for IaaS/PaaS migration, including VMs, app services, and databases.
- ✓ Created automated Concourse CI pipelines for continuous build, test, and release across service tiers.
- ✓ Deployed and managed web-based invoicing apps on Azure using Visual Studio and PowerShell automation.
- ✓ Migrated SQL Server to Azure SQL Database using SQL Azure Migration Wizard; used Python APIs to upload agent logs to Blob Storage.
- ✓ Actively contributed to the Golang open-source ecosystem by developing reusable libraries and tools.
- ✓ Used PowerShell to automate Azure tasks: provisioning resource groups, app services, storage, and firewall rules.
- ✓ Built GitHub Actions workflows to manage Kubernetes updates, reducing downtime and accelerating feature delivery.
- ✓ Deployed and configured Azure Cosmos DB with Web API access for scalable NoSQL storage.
- ✓ Provisioned and queried data via Azure Data Lake and U-SQL for cross-service federated analytics.
- ✓ Tracked infrastructure cost and health insights using CloudHealth to drive optimization strategies.

Environment: Azure, IaaS, PaaS, Terraform, Python, Auto-scaling, CloudFormation, JSON, YAML, Java, C#, Docker, Kubernetes, GitLab, GitHub Actions, ArgoCD, SonarQube, Nexus, Maven, MySQL, Azure Resource Groups, IoT Hub, Event Hub, Azure DNS, Kafka, Azure Cosmos DB, AzureML, Azure DevOps, nginx, Windows, IAM.

Client: E2G, Katy, TX

Aug 2022 to March 2023

Role: Sr Cloud DevOps Engineer

Project Title: AWS Cloud Migration & DevOps Automation

Project Description:

Led the migration of legacy on-prem infrastructure to AWS cloud, implementing Infrastructure as Code (IaC) using Terraform and CloudFormation. Built fully automated CI/CD pipelines using GitHub Actions, GitLab, and Jenkins, integrated with SonarQube, Nexus, and vulnerability scanning. Deployed and managed containerized applications using Kubernetes (EKS) and Docker. Enhanced observability with Prometheus and Grafana, improving performance monitoring and system reliability.

Responsibilities:

- ✓ Researched cloud-based modernization strategies to successfully migrate a computer-assisted coding solution to AWS.
- ✓ Designed and provisioned scalable AWS infrastructure using Terraform and CloudFormation aligned with best practices for IaC.
- ✓ Collaborated with business stakeholders to gather infrastructure and deployment requirements through technical discussions and workshops.
- ✓ Integrated GitHub Actions with Terraform to enable automated and consistent provisioning of cloud resources across environments.
- ✓ Connected Git-based version control with ML repositories and model registries to enable reproducible model development and deployment.
- ✓ Managed Linux-based environments including users, permissions, file systems, and implemented OS-level hardening.
- ✓ Built Grafana dashboards tailored to stakeholder KPIs, enabling data-driven operational decisions.
- ✓ Developed REST APIs in Go (Golang) and integrated them with front-end systems and third-party platforms.
- ✓ Deployed microservices to Amazon EKS using Argo CD to maintain high availability and self-healing configurations.
- ✓ Built multithreaded Java applications optimized for concurrency and responsiveness for real-time workloads.
- ✓ Automated IaaS deployments with Terraform and CloudFormation templates, reducing manual provisioning efforts.
- ✓ Defined CI build strategies, branching models, and merge policies for AWS-hosted source code repositories.

- ✓ Executed critical on-prem to AWS data migrations with performance tuning for Redshift clusters and RDS engines.
- ✓ Created modular CloudFormation templates for EC2, S3, IAM, RDS, Auto Scaling, and Security Groups across multiple AWS accounts.
- ✓ Tuned Prometheus for retention, scrape intervals, and storage optimizations to maximize monitoring efficiency.
- ✓ Built continuous integration test pipelines using Jenkins and Azure DevOps to enable faster feedback cycles.
- ✓ Used Golang modules to manage dependencies and ensure reproducible builds across containerized services.
- ✓ Managed Amazon EKS clusters, handling node scaling, upgrades, and workload distribution.
- ✓ Extended SaaS platforms through scripting and custom configuration to meet business logic and user workflows.
- ✓ Installed RedHat Linux using Kickstart, applying enterprise-grade hardening policies for security compliance.
- ✓ Deployed applications to EKS via Helm charts and Kubernetes manifests within fully automated CI/CD pipelines.
- ✓ Developed automated deployment workflows in Urban Code Deploy, integrating testing, approvals, and rollbacks.
- ✓ Built cloud-native applications using supported languages and frameworks on AWS PaaS offerings.
- ✓ Automated AWS infrastructure builds using Python and CloudFormation templates.
- ✓ Set up CI/CD pipelines in Linux environments using SVN, Bitbucket, Jenkins, Bamboo, ANT, Maven, and Nexus.
- ✓ Authored Terraform modules to create custom VPCs, subnets, and NAT gateways for secured application deployments.
- ✓ Configured AWS public cloud security controls including NACLs, route tables, internet gateways, and security groups.
- ✓ Wrote Ansible playbooks to deploy and manage web applications across hybrid infrastructure.
- ✓ Collaborated on Terraform-Jenkins integrations for provisioning and service configuration through Ansible.
- ✓ Administered and scaled OpenShift clusters by managing node pools and container orchestration settings.
- ✓ Designed HA and auto-scaling architecture using Terraform and AWS best practices for production workloads.
- ✓ Implemented Kubernetes orchestration with kOps for cluster provisioning, upgrades, and asset recovery.
- ✓ Used Ansible for centralized configuration management and network configuration in VPC environments.
- ✓ Built a GitLab CI/CD pipeline using gitlab-ci.yml, integrating Clair for container security scans.
- ✓ Worked with HP Automation Server to validate successful deployments of enterprise artifacts (WAR/EAR).
- ✓ Provisioned AWS infrastructure using CLI and CloudFormation, including EC2, S3, and CloudWatch agents.
- ✓ Automated storage of logs in S3 and performed data ingestion to Redshift using Python and AWS CLI.
- ✓ Created RDS MySQL clusters and managed connectivity using Amazon RDS Console for production use cases.
- ✓ Tested AWS WorkSpaces for hosting custom desktop environments and internal apps in virtual workstations.
- ✓ Designed and deployed fault-tolerant Kubernetes architecture with redundancy and load balancing across zones.
- ✓ Used Terraform, Chef, Vault, Consul, Docker, and Kafka for modern infrastructure and service orchestration.
- ✓ Maintained Git repositories, performed version control workflows, and code review integrations.
- ✓ Built and deployed Docker containers via CI/CD pipelines using AWS developer tools and automation.
- ✓ Created load testing pipelines to evaluate site performance across environments and analyze scalability.
- ✓ Used Jira to create, track, and close change/incident tickets and followed standard ITIL-based change processes.
- ✓ Deployed MySQL containers with Docker and automated workflows using Python; monitored performance via Grafana.

Environment: AWS (EC2, VPC, ELB, S3, RDS, CloudTrail), Git, EBS, CloudWatch, CloudFormation, Docker, Jira, AWS CLI, Auto Scaling, Jenkins, Terraform, RedHat Linux, Ansible, Helm, EKS, GitLab CI, Nexus, Prometheus, Grafana, Python, Go, Bash, OpenShift

Client: Baylor Scott & White Health, Dallas, Texas

Nov 2020 to July 2022

Role: Sr. Cloud DevOps Infrastructure Engineer

Project Title: Hybrid Cloud Infrastructure Automation & Optimization for Healthcare Applications

Project Description:

At Baylor Scott & White Health, I played a key role in designing and implementing a scalable, secure, and automated hybrid cloud infrastructure using AWS and on-prem data centers. The project aimed to migrate, optimize, and automate healthcare applications, ensuring high availability, security, and compliance with industry standards.

Responsibilities:

- ✓ Involved in designing and deploying a multitude application utilizing almost all of the AWS stack (Including EC2, Route53, S3, RDS, Dynamo DB, SNS, SQS, IAM) focusing on high-availability, fault tolerance, and auto-scaling in AWS Cloud formation.

- ✓ Developed shell scripts (e.g., Bash, Python) and automation workflows to streamline repetitive tasks, automate system administration tasks, and improve operational efficiency in Linux environments.
- ✓ Interacted with client teams to understand client deployment requests.
- ✓ Responsible for distribution applications across hybrid AWS and physical data centers.
- ✓ Configured AWS IAM Security Group in Public and Private subnets in VPC.
- ✓ Created custom GitHub Actions workflows to automate unit, integration, and end-to-end testing, improving code quality and reducing bugs by 30% in production releases.
- ✓ Written Cloud Formation templates and deployed AWS resources using it.
- ✓ Creating S3 buckets and managing policies for S3 buckets and Utilized S3 bucket and Glacier for storage and backup on AWS.
- ✓ Creating Cloud Watch alerts for instances and using them in Auto scaling launch configurations.
- ✓ Involved in scrum ceremonies (stand-up, grooming, planning, demo/review, and retrospective) with the teams.
- ✓ Maintained the user accounts (IAM), RDS, Route 53, VPC, RDB, Dynamo DB, SES, SQS and SNS services in AWS cloud.
- ✓ Built Continuous Integration environment Jenkins and Continuous delivery environment.
- ✓ Deployed applications on AWS by using Elastic Bean Stalk.
- ✓ Dockerized Applications using Docker images using Docker files.
- ✓ Used Kubernetes to provide a platform for automating deployment, scaling, and operations of application containers across clusters of hosts.
- ✓ Worked closely with Development teams and performance test engineers for EC2 size optimization and Docker build containers.
- ✓ Used build automation tools like ANT, Maven for building applications.
- ✓ Ansible installation and maintenance for infrastructure automation.
- ✓ Wrote Ansible Playbooks with Python SSH as the Wrapper to manage configurations of AWS nodes.
- ✓ Created and maintained Chef recipes and Chef cookbooks to simplify and expedite deployment of applications and mitigate user error.
- ✓ Provide highly durable and available data by using S3 data store, versioning, lifecycle policies, and create AMIs for mission critical production servers for backup.
- ✓ Leveraged AWS cloud services such as EC2, auto-scaling and VPC to build secure, highly scalable, and flexible systems that handled expected and unexpected load bursts.
- ✓ Built servers using AWS, importing volumes, launching EC2, RDS, creating security groups, auto-scaling, load balancers (ELBs) in the defined virtual private connection.
- ✓ Designed and implemented scalable, secure cloud architecture based on Amazon Web Services.
- ✓ Setup and build AWS infrastructure various resources, VPC EC2, S3, IAM, EBS, Security Group, Auto Scaling, and RDS in Cloud Formation JSON templates.
- ✓ Experience in Troubleshooting, Configuring and Deploying various enterprise applications in Web Logic, Web Sphere and Tomcat.
- ✓ Worked on JIRA installation and upgrade and performed JIRA configuration.
- ✓ Managed and documented all post deployment issues utilizing the Post Deployments Issue Log.

Environment: AWS (EC2, VPC, ELB, S3, RDS, Cloud Trail and Route 53), Python, GIT, VPC, SQL, Cloud Watch, AWS Auto Scaling, Cloud Formation, Chef, Ansible, Jenkins, Nagios, ELB, Shell Scripts, Unix/Linux Environment.

Client: State of Maryland, Baltimore, MD

Jan 2019 to Sep 2020

Role: DevOps Engineer

Project Title: CI/CD Automation & Cloud Infrastructure Optimization

Responsibilities:

- ✓ Involved in DevOps migration/automation processes for build and deploy systems.
- ✓ Consulted and recommended client in Build and Release Management Implementation.
- ✓ Used SCM/Build tools for Developers. Helping to resolve all SCM/Builds issues like merge conflicts, compilation errors, missing dependencies, Branching/Merging/Tagging.
- ✓ Automated using Ansible, Python, Perl, or shell scripting with attention to detail, standardization, processes, and policies.
- ✓ Worked in an agile development team to deliver an end-to-end continuous integration/continuous delivery (CI/CD) product in an open-source environment using tools like Puppet, Jenkins.

- ✓ Experience in writing Puppet manifests and modules to automate the deployment process and to integrating Puppet manifests into Jenkins jobs for a continuous delivery (CD) framework.
- ✓ Configured and monitored distributed and multi-platform servers.
- ✓ Setup and build AWS infrastructure using various resources, VPC EC2, RDB, S3, IAM, EBS, Security Group, Auto Scaling, SES, SNS and RDS in Cloud Formation JSON templates, Route53, Lambda.
- ✓ Worked on AWS for deploying EC2 instances consisting of various flavors viz., Oracle Linux, RHEL, CentOS, Ubuntu and Solaris in both Linux and Windows.
- ✓ Created a fully CI/CD process. Automated Build and Deployment Platform and coordinating code build promotions and orchestrated deployments using Jenkins/Hudson and GitHub.
- ✓ Build Java code on to different Jenkins servers as per the schedule.
- ✓ Researched and implemented code coverage and unit test plug-ins like find bugs, check style and with Maven/Hudson.
- ✓ Manage releases to make sure the code goes to live with Quality and security.

Environment: Java, Maven, ANT, Gradle, groovy, Python, GIT, SVN, Puppet, Jenkins, Ruby, Splunk, JMeter, Tomcat, Sonar Qu be, Bugzilla, Shell, and Perl Scripts, Ansible, PowerShell, Nexus, RHEL 5.x/6.x

Client: Kindred Health - Louisville, KY.

May 2017 to Dec 2018

Role: Build & Release Engineer

Project Title: Continuous Integration & Release Management

Responsibilities:

- ✓ Used Jenkins as a continuous integration tool: creating new jobs, managing required plugins, configuring the jobs selecting required source code management tools, building triggers, building system, and post-build actions, scheduling automatic builds, and notifying the build reports.
- ✓ Develop/Improve continuous integration and automation scripts and perform database deployments.
- ✓ Responsible for troubleshooting environmental issues.
- ✓ Implementing Continuous Integration and Continuous Delivery framework using SVN, Bitbucket,
- ✓ ANT, Maven, Jenkins, Bamboo, Nexus, Control Tier, Make in Linux environment.
- ✓ Worked on creating various modules and automation of different facts in Puppet, adding nodes to enterprise Puppet Master, and managing Puppet agents. Making Puppet manifests files and implementing Puppet to convert IAC.
- ✓ Integrated Bitbucket with JIRA for transition JIRA issues from within Bitbucket Server and monitored the JIRA issues in Bitbucket Server.
- ✓ Set up the Linux Cron jobs to automate various build-related and application data synchronization jobs.
- ✓ Built and managed a highly available monitoring infrastructure to monitor different application servers and their components using Nagios.
- ✓ Designed and scripted using Ant for J2EE, Web Services, Reusable JARS, Web Client, and Open Source to create Master build.xml build Properties and provided technical support to the development team for compilation problems.

Environment: Linux, Windows, Tomcat, Jira, JBoss, Puppet, Puppet, Ant, Maven, SVN, Bitbucket, Nagios, Java, Shell Scripting, Python, Bash, Agile, Scrum.

Client: Lowe's, Charlotte, NC.

Sept 2015 to April 2017

Role: Linux Administrator

Project Title: Enterprise Linux Administration & Monitoring

Responsibilities:

- ✓ Participated in the release cycle of the product, which involves environment like Development, QA, and Production.
- ✓ Installed and designed RHEL Kick Start Installation by configuring NFS, NIS, DNS, DHCP.
- ✓ Monitoring system performance, adding physical memory to the servers and User administration setup.
- ✓ Troubleshooting Network, File system memory, CPU, Swap Space and issues, TCP/IP, NFS, DNS, SMTP in Linux and Solaris servers
- ✓ Performed Disaster Recovery in RHEL servers which comprises of LVM based FS and Red Hat Clustering.
- ✓ Performed OS upgrades Kernel Upgrades to Solaris and RHEL on production servers and testing servers.
- ✓ Installed and configured Nagios system monitoring, writing custom scripts for ESXi servers.

- ✓ Administered VMware ESXi, for running the RHEL, Solaris, Windows, Centos and Servers on Development and test servers using vCenter.
- ✓ Configuring and maintaining System Securities using IPTABLES.
- ✓ Performance tuning of Virtual Memory, CPU, framework utilization in Linux and Solaris servers by SAR tools
- ✓ Configuration of Monitoring tools in Linux and Solaris servers by Nagios

Environment: RHEL, Solaris, Centos, Nagios, VMware ESXi, LVM, TCP, DNS, SMTP, Bash Scripting.

Client: T-Mobile Los Angeles, CA.

Feb 2014 to Aug 2015

Role: Linux Administrator.

Project Title: Cloud Migration & Infrastructure Automation

Responsibilities:

- ✓ Day to day problem handling like related to File Systems, Disk, Memory, CPU, Network etc.
- ✓ Build application and database servers using Azure and create AMIs as well as use RDS for Oracle DB. Install, configure and administer log analyzer tool Cloud Watch.
- ✓ Worked on migrating VMware to AWS using snowball and VM Import/Export, experience on Azure code deploy, lambda, VPC and CLI. Experiencing with Nagios and Splunk monitoring, automate site configuration using Puppet.
- ✓ Worked on version control using GitHub, automating builds using Jenkins, automating tasks using puppet, worked on tomcat, JBoss install configuration and MongoDB, MySQL.
- ✓ Deploy Puppet to completely provision and manage AWS EC2 instances, volumes, DNS, and S3.
- ✓ Backup and restore of databases in Oracle and MySQL Server DB's, worked on the configuration of server monitoring tool like Nagios, limiting user account privileges using SUDOERS.
- ✓ Support for Windows and Linux problems assigned by client operations.
- ✓ Administration of RHEL 5,6,7 which includes installation, testing, tuning, upgrading, and loading patches, troubleshooting on VMware virtualization systems.
- ✓ Installing RedHat Linux using Kickstart and applying security polices for hardening the server based on the company policies.

Environment: RedHat LINUX 5.5/6.3, Kickstart, Ubuntu, Windows, Oracle, DB2, Jenkins, Git, Subversion, VMware, AWS, Chef, Puppet, Apache Webserver, JBoss, WebSphere Application Server & UNIX shell scripting.
