

Sai Santoshi Elakurthy

Software Developer

The Colony, TX, USA | esaisantoshi@gmail.com | 940-758-3306 | [linkedin.com/in/saisantoshi-elakurthy](https://www.linkedin.com/in/saisantoshi-elakurthy)

SUMMARY

- 5 years of IT experience in healthcare and retail, specializing in designing, developing, testing, and deploying web-based N-tier architecture systems and Windows applications using Microsoft technologies.
- Extensive expertise in developing applications with Visual Studio.NET technologies, including C#, ASP.NET, ASP, ADO.NET, XML, Web Services, WCF, and MVC.
- Strong knowledge of various SDLC methodologies such as Agile and Waterfall, with the ability to manage and execute multiple projects simultaneously, even in time-sensitive situations.
- Skilled in front-end development using ASP.NET, XML, HTML, CSS, JavaScript, jQuery, and AJAX to create dynamic user interfaces.
- Proficient in LINQ to Objects, LINQ to SQL, and LINQ to XML, with experience in Service-Oriented Architecture (SOA) implementing Web Services, SOAP, and SOAP Extensions, as well as WCF for hosting, debugging, tracing, transactions, and security.
- Hands on experience in DTS, ETL, Creating Jobs, Packages, and Reporting Services (SSRS) and Integration Services (SSIS) on SQL Server Database
- Strong knowledge of Design Patterns, and the UML methodology. Prepared technical design documents, use cases, test cases and user manuals for various projects and good at fixing bugs, code review. Performed Test Driven Development (TDD) using NUnit.
- Experienced in handling HTTP methods like GET, POST, PUT, DELETE in API endpoints for CRUD operations.
- Proficient in Object-Relational Mapping (ORM) tools using LINQ and experienced in ASP.NET MVC framework, including Controller Actions, View Engines, HTML Helpers, and Entity Framework models.
- Expertise in building ASP.NET MVC 4 applications using the Code First approach in Entity Framework, with a focus on UI development using Razor View Engine and adhering to the MVC architectural pattern.

TECHNICAL SKILLS

Programming languages: C# | VB.NET | Typescript | Node.js | HTML5 | CSS3 | JavaScript (ES6) | Python | C | Java | PHP | SQL.

.NET & JavaScript Libraries/Frameworks: .NET 4.5/6.0 | ASP.NET Core 6.0 | AJAX | ADO.NET | MVC 5 | jQuery | ReactJS | Redux | Angular | Junit | Jest | Webpack | NPM.

Other Frameworks, Libraries and Tools: Kafka | JSON | XML | Bootstrap | Restful APIs | Swagger | Postman | Microservices | SSRS | Visual Studio 2022 | VS Code | Team Foundation Server (TFS) | Docker | GitHub | GraphQL | Jira | SonarQube.

Databases & Cloud Technologies: MySQL | Oracle | NoSQL | DBMS | PostgreSQL | SQL Server 2019 | MongoDB | Azure DevOps | AWS Cloud.

Operating Systems: Windows | Linux/Unix | MacOS.

EDUCATION

University of North Texas | Denton, Texas

May 2024

Master of Science - Computer Science.

Relevant Courses: Computer Algorithms, Software Engineering, Data Analytics, Distributed & Parallel Databases.

Sreyas Institute of Engineering and Technology | India

June 2021

Bachelor of Technology - Computer Science and Engineering

EXPERIENCE

Software Developer | UF Health, Jacksonville, FL

June 2024 – Current

- Developed a dynamic and modern web application using ASP.NET Core, replacing a widely used corporate internal application and ensuring cross-browser compatibility. This transition reduced maintenance costs by 30%
- Designed a web application containing various modules such as Application Admin, Patient Information System, Financials, Material Management, Medical Record System, Order Management, and Maintenance, which was migrated from MS Access to SQL Server with enhancements and ongoing maintenance using ASP.NET.
- Crafted high-performance C# applications and developed web applications using React, incorporating state management tools like Redux and Context API. Optimized front-end performance with HTML5, JavaScript, TypeScript, Angular, and MVC 5.
- Designed, developed, and optimized RESTful APIs with Web API and ASP.NET Core to seamless front-end-to-back-end communication and deployed ASP.NET Core applications and APIs to ECS Fargate using Azure DevOps.
- Designed and implemented a Microservices-based architecture, making applications more scalable, resilient, and easier to maintain.
- Managed SQL Server database, ensuring optimal performance and data integrity, resulting in a 25% reduction in query response time.
- Utilized ADO.NET Entity Framework and Entity Framework Core for efficient CRUD operations with LINQ and Lambda expressions.
- Implemented scalable, secure, and resilient solutions on Microsoft Azure, reducing infrastructure costs by 30%, while engaging in Agile methodologies, contributing to Scrum and Kanban teams for timely project deliveries, and managing the repositories using Git.
- Integrated third-party RESTful APIs into applications for features like payment gateways, authentication, and data processing.
- Elevated code reliability and quality by achieving above 85% code coverage with NUnit and UI automation testing with Vitest.
- Applied Dependency Injection (DI) to improve code maintainability and testability in ASP.NET Core applications.

- Designed and implemented software design patterns such as Repository, Factory, and Singleton to enhance application structure and scalability.
- Conducted root cause analysis, implemented corrective actions, and enhanced code quality through peer code reviews and constructive feedback.
- Collaborated with internal and external stakeholders to gather requirements, develop solutions, and ensure successful project delivery.
- Actively participated in all phases of the Software Development Life Cycle (SDLC), including requirement analysis, design, development, testing, deployment, and maintenance of the application.
- Created detailed technical design documents to support application architecture and functionality based on SDLC best practices.

Research Assistant | University of North Texas, Denton, TX

Jan 2023 – May 2024

- Significantly improved EHR systems using C# and ASP.NET, reducing data retrieval times by 20%.
- Developed RESTful APIs using ASP.NET Core, enhancing system modernization, increasing user engagement by 15%, and improving API response times by 30%.
- Developed Microservices to break down complex applications into smaller, independent services, making deployment and maintenance easier.
- Leveraged Apache Kafka for real-time data streaming, ensuring seamless communication between microservices and significantly improving event-driven processing in EHR systems.
- Implemented CI/CD pipelines using Azure DevOps and Jenkins, reducing deployment time by 40%.
- Created and optimized tables, views, stored procedures, and triggers in SQL Server. Also developed and tested database solutions using Oracle PL/SQL.
- Developed and maintain robust, data-driven web applications using Angular while integrating and optimizing Informatica ETL processes for seamless front-end data interaction, led solutions redesign to improve data processing speed by 30%.
- Conducted bi-weekly sprints and incorporated CI/CD pipelines using Azure DevOps.
- Managed data migration and transformation with SSIS and conducted unit and system testing using NUnit.
- Automated build and deployment processes using build scripts, ensuring efficient and error-free deployments in alignment with SDLC deployment standards.
- Ensured robust documentation of the SDLC process, including user manuals, technical specifications, and change management logs.

Software Developer | DeCurtis International Pvt. Ltd., Jaipur, IN

Jan 2020 – Aug 2022

- Developed a scalable Ship Onboarding and Management Platform using ASP.NET Core, C#, and Entity Framework.
- Created RESTful APIs for seamless communication between ship systems and central databases.
- Integrated Apache Kafka to enable real-time event-driven communication between different ship modules, improving operational efficiency and reducing delays in data synchronization.
- Managed crew and operational data with SQL Server, ensuring data integrity and high availability.
- Utilized Entity Framework Core for data access, improving database interaction efficiency and reducing query execution time.
- Implemented Dependency Injection (DI) in ASP.NET Core applications to improve modularity and maintainability.
- Designed and applied software design patterns like Repository Pattern for data access and Factory Pattern for object creation.
- Enhanced application security by implementing role-based access control (RBAC) and ASP.NET Identity authentication.
- Designed responsive UI interfaces using HTML5, CSS3, and Bootstrap for enhanced user experience.
- Automated notifications for alerts and onboarding updates via email and SMS services.
- Deployed the application on Azure Cloud Services, ensuring scalability, security, and optimal performance.
- Streamlined crew onboarding, reducing processing time by 12% through automation and optimized data management.
- Improved system reliability, achieving 99.8% uptime for critical ship management operations.
- Delivered 12 modules within scheduled project timelines, ensuring client satisfaction and operational excellence.
