

Sai Varaprasad

Java Full Stack Developer

☎ +1 (515) 497-0083 ✉ svaraprasadkothapally@gmail.com  [LinkedIn](#)

Professional Summary

- Java Full Stack Developer with over 4 years of experience in developing scalable, high-performance web applications using Java, Spring Framework, React.js, and Angular.
- Proficient in designing and developing robust microservices and RESTful APIs with Spring Boot, ensuring seamless integration, and reducing system downtime and response time.
- Extensive experience in cloud platforms such as AWS, Azure, and Google Cloud, leveraging EC2, Lambda, S3, and other services for efficient, high-availability application deployment and management.
- Strong background in implementing Kafka for real-time data streaming, enabling efficient data processing and message-driven architecture in distributed systems.
- Expertise in DevOps tools like Docker, Kubernetes, and Jenkins, enhancing deployment pipelines, system scalability, and reliability across multiple environments.
- Adept at working in Agile environments, collaborating effectively with cross-functional teams, and delivering high-quality code while continuously optimizing performance and user experience.

Skills

Programming Languages: Java (8/11/17), JavaScript, TypeScript, Python, C++, SQL, PL/SQL.

Frameworks & Libraries: Spring Framework (Spring Boot, Spring MVC, Spring Security, Spring Data JPA), Hibernate, React.js, Angular (Angular 14+), Node.js, Express.js.

Web Technologies: HTML5, CSS3, JavaScript (ES6+), TypeScript, JSP, Servlets, Bootstrap, jQuery, JSON, AJAX.

DevOps & CI/CD: Docker, Kubernetes, Jenkins, Bamboo, Ansible, Maven, Gradle.

Cloud Platforms: AWS (EC2, S3, Lambda, RDS, SQS, CloudWatch), Azure, Google Cloud Platform (GCP).

Databases: MySQL, PostgreSQL, MongoDB, Cassandra, SQL Server, Oracle.

Messaging Systems: Apache Kafka, RabbitMQ.

Version Control: Git, GitHub, GitLab, Bitbucket, SVN.

Testing & Logging: JUnit, Mockito, Selenium, TestNG, JMeter, Cucumber, Log4J, Splunk.

Microservices & APIs: RESTful APIs, GraphQL, OpenAPI/Swagger, WebSockets.

Development Methodologies: Agile (Scrum, Kanban), Waterfall, SDLC.

Work Experience

DXC Technology

August 2023 – Present

Java Full Stack Developer

United States

- Enhanced real-time data processing by utilizing Java 11 concurrency and multi-threading features, optimizing system responsiveness and improving performance by 30%.
- Developed scalable web applications using Angular 14 and Spring Boot, significantly improving system architecture and front-end performance, reducing response times.
- Architected and implemented microservices using Spring MVC and Spring Boot, delivering REST APIs for improved system integration and reducing data retrieval time.
- Streamlined back-end operations with Node.js modules (File System, Clusters, OS), achieving 40% automation improvement and system reliability.
- Optimized database operations with MongoDB and NoSQL, designing efficient collections and implementing Node.js-driven server-side automation, increasing system performance.
- Utilized Apache Kafka for real-time data streaming and messaging, enhancing data synchronization and system communication, leading to a 35% improvement in data processing.
- Deployed Docker-contained Spring REST services on AWS EC2 with Lambda, boosting scalability by 75% and eliminating operational downtime.
- Revamped CI/CD pipeline using Kubernetes and Docker, resulting in a 3x faster application delivery and enhanced system reliability.
- Conducted unit testing using JUnit and Mockito, ensuring high-quality code and reduced production errors. Implemented Log4J for logging and monitoring application activities.

- Led full-stack development in all SDLC phases (requirement gathering, design, analysis, coding, testing, deployment), accelerating project delivery by 30% and improving code quality.
- Designed and developed REST APIs using Spring Boot and Spring MVC, optimizing data transmission in JSON format, reducing data processing time.
- Developed and optimized microservices using Node.js and Spring Boot, increasing system scalability by 60% and reducing development time.
- Integrated front-end technologies such as Angular, HTML5, CSS3, Bootstrap, and TypeScript to improve user experience and boost system performance.
- Streamlined request validation, logging, and error handling across microservices using Node.js, leading to a 25% reduction in error rates and enhanced system reliability.
- Deployed applications using AWS services (EC2, S3, Auto-Scaling, SQS) with a focus on high availability, fault tolerance, and auto-scaling, ensuring minimal downtime.
- Led DevOps initiatives, optimizing the deployment pipeline using Jenkins, Docker, and Kubernetes, resulting in a 40% increase in deployment efficiency and minimizing system downtime.
- Maintained and optimized Elasticsearch clusters, improving search and indexing speed, ensuring high availability and operational efficiency.

Education

Southeast Missouri State University**GPA: 3.85/4.00***Master of Science in Computer Science**Cape Girardeau, MO*
