

Sai Susmitha Dasari
Senior Network Engineer
dsusmitha0612@gmail.com
317-798-8823

SUMMARY:

- **5.2 years** of experience in network and security engineering, specializing in major network support and security improvement through network testing, design, and deployment.
- Working with Palo Alto firewalls, especially the PA-7000, PA-5450, and PA-3440 series, and the ability to use Panorama to control them.
- Installed and managed the Fortinet FortiGate 3200F, 1800F, 100E, 200E firewall systems, defending business networks against advanced attacks.
- Configuring and managing security policies within Cisco ACI to ensure consistent and effective enforcement of access controls across the data center network.
- Integrated Viptela SD-WAN with diverse cloud services and public cloud providers, ensuring uninterrupted connectivity and optimizing application performance.
- Set up Cloud Watch Logs to collect and centralize log information from AWS services, applications, and infrastructure elements for security analysis and compliance audits.
- Deployed a Cisco ISE solution for a commercial client, covering wired, wireless, and VPN users, and integrating converged access switches.

TECHNICAL SKILLS:

Firewall	Palo Alto, Cisco Firepower, ASA, Juniper SRX series, Checkpoint Firewall, Fortinet (FortiGate) Firewall 7081F, 6300F, 4200F.
Routing	RIPv2, OSPF, EIGRP, IS-IS, BGP, PBR, Route Filtering, Redistribution, Summarization, and Static Routing.
WAN Technologies	Frame Relay, ATM, MPLS, Leased lines & exposure to PPP
Switches	Nexus 9k, 5k, 7k, Arista switches, Catalyst switches and Juniper switches.
Networking Concepts	Access-lists, Routing, Switching, Subnetting, Designing, VLAN, VTP, NAT
Load Balancers	F5 Networks (Big-IP) LTM, Viprion.
Cloud services	AWS (VPC, Route53, direct connect, Cloud front)

Professional Experience:

Wells Fargo, NYC, NY
Network Security Engineer

Jan 2023 - Present

Responsibilities:

- Implemented, and managed the Palo Alto PA-5430, PA-5420, PA-5450 network firewalls, which protect corporate networks against state-of-the-art intrusions.
- Configured and oversaw sophisticated security solutions, including NAT and VPN protection, URL filtering, intrusion prevention systems, and anti-spyware software.
- Implementing optimal performance and reducing risk through frequent evaluation and optimization of firewall rules.
- Deployed and analyzed internet behavior using Palo Alto's Panorama and other monitoring tools to identify and minimize security threats.
- Install the applications on the FortiGate 200E, 500E, 1800F firewalls, assure the devices have the most recent software loaded, and perform regular upgrades to ensure optimal performance.

- Setting up interfaces so that devices like FortiGate Manager and Fortinet may be watched over and examined in order to determine requirements and demands.
- Deployed SOPs and configuration templates for FTD deployment and management, ensuring consistency across projects.
- Developed the creation of precise routing elements, improved charts, and higher bandwidth while ensuring compliance with the regulations governing Viptela vSmart SD-WAN.
- Configured to do regular reviews, implement rules, and provide unified management of the Viptela SD-WAN systems, vManage installation is required.
- Deployed to track and address security and connectivity issues using the built-in capabilities and data of Cisco ACI, resulting in a 25% reduction in network downtime.
- Involved in troubleshooting and resolving security-related issues on Cisco Nexus switches, including traffic anomalies, access violations, and security policy conflicts.
- Integrating and switching between more contemporary and older generations of Cisco routers is made easier by modifying them, managing, changing, and monitoring IPv4 and IPv6 rules.
- Developed the capacity to recognize and prevent undesired activities on network devices The ISR 1160, 1131, and 1120 series of Cisco routers come with enhanced risk protections.
- Implemented capacity to manage and restrict software using Ivanti Security Controls,(ISEC) shielding users' systems from unwelcome software installations.
- Configured at creating bespoke Ansible modules that assist automated security precautions and integrate with certain antivirus software.
- Integrated productivity by using Python scripts and Amazon Lambda to automate repetitive connection tasks and handle emergencies.
- Configured and analyzed use patterns with AWS Cloud Trail and VPC Flow Logs to gather information for managing resources and security assessments.
- Configured to protect DNS exchanges and stop exposure-related cache attacks, Infoblox DNSSEC was used to improve the accuracy and dependability of DNS answers.
- Implement safe detection/prevention and entry strategies to enhance the dependability of Arista switches 7358, 7368X4, 7280R3, 7170, and 7358X4.
- Worked on F5 BIG-IP Cloud Edition has been set up for managing application resources in both private and public cloud settings.
- Developed the availability and service uptime by implementing F5 LTM and GTM logs and analytics for thorough solving issues for software bottlenecks.

DXC Technologies, Atlanta, GA
Sr. Network Engineer

May 2021 – Nov 2022

Responsibilities:

- Using Panorama to improve PAN OS-7.x and 8.x websites guarantees the maximum degree of efficacy and safety, with the PA-7000-100G-NPC-A, PA-5450, and PA-3440 series.
- Implemented the performance of vital business technologies. Palo Alto firewalls must be routinely configured and maintained in order to recognize and handle complicated safety concerns.
- Configure user accounts, recognize individuals across all Palo Alto firewalls, and use customized access to solution providers.
- Developed Cloudflare analytics and performance metrics to proactively troubleshoot issues, fine-tune configurations, and maintain high availability.
- Implemented Cloudflare configuration updates and deployments through API integrations, streamlining processes and reducing manual overhead.
- Setting up and maintaining Viptela vEdge devices ensured a seamless connection with the existing network infrastructure.
- Implementing APIC management for effective rule control, ongoing evaluation, and maintenance using the Cisco ACI devices setup.

- Set up networks and EPG separation on Cisco Nexus 7010, 7018, 5548, and 5600 switches to restrict connectivity between distinct application areas.
- Installing VRF websites on Cisco Nexus switches, which allowed organizations to maintain their own divisions.
- Configured virtual divides to the Cisco Nexus switch design for better connection security, the structure was rearranged to incorporate automated business principles.
- Install Infoblox DNS Firewall, follow DNS security standards, obstruct links to shady websites, and monitor efforts to infect computers with malware.
- Setting up Cisco routers from the ASR 9001, 9006, and 9010 series that are situated on locations and have Cisco IOS-XR management capabilities.
- Implement safety precautions that are flexible in response to user needs and activity by deploying the Juniper SRX5600 and SRX5800 firewalls.
- Deployed routes that link across both sets of machines to ensure Cisco ISE may confirm configuration and persuade firewalls to employ 802.1x protocols.
- Configured efficiency assessment and network testing, Python scripts were created to preserve optimal network effectiveness and performance.
- Developed Ansible rules for rolling out security upgrades automatically across many apps and for always-secure infrastructures.
- Implemented assistance services and information from Active Directory to enable prompt restructuring in the event of a systems breakdown or cyberattack.
- Involved in regarding the information offered by Netmiko enables one to regularly and systematically monitor, assess, and present health data.
- Working understanding of centrally managed solutions, such as Arista Cloud Vision, to enhance switch management and architecture on Arista 7020R, 7260X, and 7170.
- Configure the MR18, MR20, and MR26 Cisco Meraki internet routers to provide users with consistent, secure connectivity in a variety of situations.
- Developed in tandem with AWS Auto Scaling, Cloud Watch assisted in adjusting staff in response to assessments for improved monitoring.
- Developing communication between AWS Cloud Front and other vital AWS services, such Amazon S3 and EC2, to deliver quick and inexpensive internet connectivity.
- Configured and managing the Cloud Trail, a consolidated picture that incorporates AWS operations from several devices and locations for efficient monitoring and analytics.
- Developed and configured F5 BIG-IP virtual servers, pools, and nodes, optimizing application performance and minimizing response time.
- Implemented DNS resolution using F5 GTM, routing users to the nearest data center and reducing latency for global customers by 30%.

Aye Finance, India
Network Engineer

Dec 2019 – April 2021

Responsibilities:

- Implementing ACLs on Cisco 5520, 5555, and 5554 ASA firewalls for website locations controlling assets, network surveillance, and system control.
- Improved the performance of the R81, 13k, and R80.30 firewall series and assisted the Checkpoints TAC personnel in resolving both software and hardware problems.
- Configured to establish a secure connection, setup and oversee VPN and site-to-site connectivity for customers and distant locations utilizing Juniper firewalls.
- Improving and streamlining network tracking was achieved by incorporating adjustments into the design, framework, and analysis of online addresses of Cisco ASA.
- Configuring protocol designs for BGP, EIGRP, RIP, MPLS, VPN, and OSPF to manage routing issues after transfers and additional user connectivity.

- flaws and possible threats including spyware infestations and outside intrusion attempts.
- Configured with the F5 BIG-IP installations and recommendations offer a wealth of data; they also encourage shared knowledge and ongoing collaboration.
- Configured and deployed Silver Peak WAN optimization appliances to enhance application performance and reduce latency.
- Implementing DNS and DHCP server settings to manage the allocation of websites and IP address validation.
- Setting up network evaluation and control for TCP and UDP to guarantee a reliable and effective network and software connection.

Education: - Bachelor's Electrical and Electronics Engineering, INDIA.
