

Professional Summary

Results-driven Security Engineer with a comprehensive skillset encompassing IAM, PAM, infrastructure, compliance, and application security. Proven ability to design, implement, and manage complex IAM & PAM solutions (SailPoint, Okta, Workday Security, PingFederate, Azure AD, Active Directory, LDAP). Expertise in securing Windows and Linux environments, analyzing network traffic (Wireshark), and utilizing SIEM tools (IBM QRadar). Skilled in vulnerability and health checks management. Proficient in scripting (Python) and Application Security (Ansible, JavaScript, Angular, Node.js, web services, MongoDB, Express), with a good understanding of GRC and source code management.

Technical Proficiencies

- **Identity and Access Management (IAM):**
 - SailPoint, Auth0, Auth 2.0, SAML, and Okta Configuration, Implementation & Management.
 - PingFederate Configuration & Administration
 - Single Sign-On (SSO) & Multi-Factor Authentication (MFA) Implementation & Management.
 - Role-Based Access Control (RBAC) Design & Implementation & Management.
- **Directory Services:**
 - Active Directory Administration
 - Azure Active Directory (Azure AD), Entra, and LDAP Integration and Management
- **Security Operations:**
 - IBM QRadar Security Information and Event Management (SIEM)
 - Wireshark Network Analysis
 - Public Key Infrastructure (PKI) Management
 - Vulnerability Analysis
 - EDR – CrowdStrike, Windows Defender
 - Incident Response knowledge.
- **GRC:**
 - Policy management
 - Risk Assessment
 - Regulatory Compliance
- **Workday Security:**
 - Workday Security Configuration and Administration, ServiceNow, Jira, LDAP, etc.
- **Server Administration:**
 - Windows and Linux Servers Administration
- **Programming & Scripting Skills:**
 - Python, JavaScript and Shell Scripting
- **Software Development:**
 - Java Programming, Angular, Typescript, Node.js Development, and Express.js Frameworks.
 - MongoDB Database, SQL, and Web Services (API) Development
- **Other Tools**

OneSupport, LogicGate, SWAT, CyberArk, SafeGuard, Sentinel, PowerShell, Wireshark, GenAI, etc.
- **Process:** Standard, ITIL, Agile, Scrum
- **General Professional Skills:**
 - Problem-Solving
 - Analytical Thinking
 - Technical Documentation
 - Communication (Written & Verbal)
 - Team Collaboration and adaptability

Education

Bachelor of Science in Computer Information Systems,
University of Houston-Victoria, TX

Dec 2019

Certifications

- CISSP, GCP, AWS Certified Security - Specialty	<i>In Progress</i>
- ICS2 Certified in Cybersecurity	2025
- Certificate of Excellence – TCS Initial Learning Program	2021
- Microsoft Certified: Azure Fundamentals	2020
- Microsoft Certified Solutions Associate (MCSA) - Windows Server	2015
- Advanced Microsoft Access	2016
- Microsoft Certified Professional (MCP) Windows Server	2014
- CompTIA A+	2014

Professional Experience

TATA Consultancy Services (TCS)

Mar. 2022 – Till Date

Client: The Home Depot

Cyber Security, Access & Compliance Engineer

- Handling user identity and privilege access, security monitoring, auditing, IAM & PAM incident reporting and response, access control policies, documentation, script writing, and user training.
- Designing, implementing, and maintaining robust Auth0 configurations, including tenants, applications, connections, rules, hooks, and actions.
- Implementing and managing IAM & PAM services using Auth0, SailPoint, CyberArk, Okta, LDAP, PingFederate, Wireshark, IBM QRadar, OneSupport, MS Sentinel, PowerShell, and JavaScript.
- Optimize Auth0 configurations for scalability, security, and efficiency in alignment with organizational IAM & PAM strategies. Using GenAI for custom training modules and simulated scenarios.
- Securing, implementing, and optimizing IAM & PAM services in compliance with privacy policies.
- Initiating and integrating multiple security projects, including VPN enforcement, multi-factor authentication (MFA) layers, password policies, SailPoint, and RPA automation.
- Ensuring the company is complying with cybersecurity policies, procedures, and regulations.
- Conducting security assessments and information system audits across networks, operating systems, and application security, with expertise in IT process auditing. Adequate knowledge in Agile, CI/CD, and DevOps methodologies, with a focus on integrating risk management and compliance strategies.
- Creating and updating documented cybersecurity policies, procedures, incident response plans.
- Working with IT management and auditors to coordinate and conduct security audits, risk assessments, and analysis. Oversees and manages internal and external security audits across various regulatory and compliance frameworks such as HIPAA, PCI DSS, SOC, ISO, and SSAE 16/ISAE 3402.
- Conducting periodic access reviews and certifications for regulatory compliance, such as PCI-DSS, SOC, SOX, HIPAA, HITECH, HITRUST, FedRAMP, etc.
- Performing assessments of the cybersecurity and agile posture within the IT network, systems, and software applications. Conducted thorough reviews of third-party contracts to ensure adherence to established standards and regulations governing information access, security, and privacy.
- Identifying opportunities to reduce risk and documenting remediation options regarding acceptance or mitigation of risk scenarios. Researching attempted security breaches and rectifying security weaknesses. Performing vulnerability assessments using cybersecurity tools and methodologies.
- Conducting regular scans using EDR tools like Nessus or OpenVAS, analyzing results, and prioritizing remediation. Using GenAI for risk assessment, compliance, threat detection and response.
- Administering vulnerability management, firewalls, SIEM, endpoint security, intrusion prevention devices, network access control systems, Internet filtering systems, and phishing exercise products.
- Configuring and maintaining firewalls, reviewing logs, and implementing access control lists.
- Utilizing least privilege principles for provisioning and managing access to applications.
- Implementing robust access control measures and role-based access control (RBAC).

Client: The Home Depot

Application Security Engineer

- Reviewed PenTest reports and scanned the network for vulnerabilities monthly, recommended critical security patches, and conducted privileged user access reviews.
- Developed Java, and JavaScript (Node.js) applications and as well, maintained legacy applications using OOP principles. Handled RPA and other notable projects with Dev Team.
- Deployed and maintained endpoint protection software.
- Provided weekly project status reports, including outstanding issues.
- Reviewed various monitoring tools daily, reported findings at status meetings, and monitored security information sources for recent incidents and threats.
- Monitored security alerts related to web applications and APIs.
- Secured MongoDB databases and ensuring data confidentiality and integrity.
- Deployed and managed Web Applications on Windows and Linux systems.
- Assisted the development team by accelerating code delivery and triaging issue backlogs.
- Developed secure backend code using node.js.
- Performed comprehensive security testing and analysis.
- Designed and implemented RESTful web services for secure data exchange with OAuth.
- Collaborated with cross-functional teams to integrate IAM solutions into existing systems.

Computer and Telecom Services LLC,**Feb. 2012 – Feb. 2021*****IAM System Administrator***

- Managed accounts in Active Directory using RBAC. Integrated automated user provisioning and de-provisioning workflows with PowerShell. Managed Windows and Linux systems.
- Implemented and managed SSO and MFA with Active Directory Federation Services
- Monitored logs and incidents, with continuous security using IBM QRadar.
- Developed, enforced, and maintained IAM tasks, solutions, and password policies.
- Utilized Jira, ServiceNow, TeamViewer, Wireshark, OneSupport, etc., for support services.
- Developed a troubleshooting guide that reduced call volume and travel time by 20%.
- Administered user access in Active Directory, including provisioning and de-provisioning. Implemented a streamlined process for user onboarding and offboarding, reducing provisioning time by 30%.
- Led the development, verification, and production deployment of MS Access Databases, optimizing data management and ensuring operational excellence for business-critical applications.
- Consistently adhered to and achieved Service Level Agreements (SLAs) for RBAC production implementations, enhancing service reliability and stakeholder satisfaction. Implemented and enforced Active Directory password policies, including complexity, expiration, and reset procedures.
- Collaborated with other teams to enhance application and file system security; generated reports on user access, permissions, and group memberships for audit and compliance processes. Developed and implemented a security improvement plan that resulted in a 20% reduction in security vulnerabilities.
- Contributed to the documentation of policies, processes, standards, and guidelines. Assisted in creating comprehensive IT policy documents that supported a successful ISO 27001 audit, ensuring organizational compliance.
- Led the execution of IAM-related projects leveraging Auth0, ensuring seamless integration with existing systems and adherence to project timelines.
- Collaborated with cross-functional teams to assess business needs, design IAM solutions, and implement them effectively.
