

Name: Sarath Karthik Guntupalli

Email: gsarath7999@gmail.com

Ph. No: (424) 333-0365

PROFESSIONAL SUMMARY:

- A hands-on full stack technical resource with 10+ years of Experience and a proven track record of developing and designing software projects through all phases of the development lifecycle to successful completion and implementation.
- Good Domain Experience in Banking, Financial and Insurance.

TECHNICAL SKILLS

Design Skills and Testing tools	Design patterns (Singleton, Business Delegate, IOC, DAO, SDLC, Active MQ etc.), MVC Design patterns, GOF Design patterns, J2EE Design patterns, EJB Design patterns, Unit, jasmine, Karma, DB Unit.
Open Source Frameworks	Struts 1.x& 2,x Spring Framework 3.0/4.0, Spring MVC, Spring Core, Spring Context, Spring JDBC Spring ORM, Spring JMS, GO4, Spring Web Services, Spring Batch, Spring Integration, Node.js ,JSP, JSTL, JNDI, Hibernate.
Web/Application Servers & Middleware	Web Logic 8.1/9.1/10.3, IBMDB2, Web Sphere 7.0/8.0, JBOSS 4.0/5.0, Apache Tomcat 6.0/7.0 and Jetty Server.
XML/HTML	XML, JSON, XSD, DTD, XSLT, SAX, DOM Parser, XSL, Path, JAXB, HTML, DHTML, CSS, XHTML, Tiles.
Database & tools	SQL, PL/SQL, Oracle, MySQL MSSQL, No SQL, Mongo DB, Cassandra PERL, Toad, DB2, HIPPA, Sybase, IBM web sphere portal, OATH, IBMDB2, GWT.
Languages	Core Java , Swing, C, C++, CI/CD, Scala, Java script, python, Shell scripting I/O.
J2EE	J2EE (JSP, Servlets, JSTL, Custom Tags, EJB, JMS, JDBC, Web Services JAX-WS, JAX-RS, XML Parsing, XSLT), Servlet, JTA, JNDI, LDAP, Struts, JSF.
Core Java	Collection, Multithreading, concurrency, RMI, Sockets, Reflection, Java Beans.
Scripting Languages	Python, JavaScript, Perl Script, Shell Script, Power shell, Ajax, JQuery, AngularJs, Ember Js, Bootstrap Js, React Js.
Protocols and UML Tools	SOAP, LDAP, RESTFul, SOA, Node.JS, Backbone.JS, Ext.JS, HTTP, HTTPS/SSL, TCP/IP, FTP, Telnet, Rational Rose 2002, Microsoft Visio.
Source Control	CVS, SVN, GitHub.

WORK EXPERIENCE:

John Deere Financials
Sr Software Engineer

Oct 2023 to Till date

Responsibilities:

- Designed and development of new applications and existing system enhancements for several complex projects
- Participated in requirements gathering and analysis to design coding, testing and deployment.
- Collaborated closely with peers in a pair programming setup, ensuring high-quality code and faster identification of bugs and logic errors.
- Provided system troubleshooting, customization and user training.
- Used agile methodology to develop user interaction forms and created use cases and sequence diagrams to assist in application design.
- Designed and implemented middleware services for enterprise messaging using Apache Kafka and Spring Cloud Stream, supporting high-throughput systems with minimal latency.
- Led cloud-native transformation for middleware orchestration on AKS with Helm.
- Implemented AWS services including S3, Lambda, and leveraged S3 for data storage, Lambda for real-time processing, enhancing security, efficiency, and cost-effectiveness across various project functionalities.
- Developed serverless applications using AWS Lambda and Node.js, reducing infrastructure overhead and improving scalability.
- Built and deployed AWS Lambda functions to handle event-driven architecture, automating tasks and processes in a cloud environment.
- Designed and developed reusable React components, utilizing React hooks (useState, useEffect, useReducer) and the Context API for efficient state management, improving code simplicity, maintainability, and reducing development time for future projects.
- Optimized React application performance through lazy loading, dynamic imports, and code-splitting, while ensuring reliability by testing components with Jest, React Testing Library, and Enzyme, and using React DevTools for profiling and debugging.
- Delivered end-to-end CI/CD automation for middleware deployment using Azure DevOps.
- Successfully deployed applications on Amazon EC2 instances, demonstrating proficiency in configuring and managing virtual servers in the cloud.
- Utilized the AWS SDK for Java to integrate DynamoDB Streams and Triggers into the Java application, enabling real-time data updates and event-driven architecture for responsive data processing.
- Core Java with Concurrent API is used extensively for parallel processing and chunk processing.
- Extensively used Spring JDBC, Spring AOP, Spring Remoting, Spring Schedulers.
- Employed document annotations in the Java project to map Java objects to MongoDB documents seamlessly, enhancing data mapping and persistence capabilities, and streamlining the interaction between Java code and MongoDB collections for efficient data manipulation and retrieval.

Environment: Java8, Spring Boot, Spring Integration, Spring Batch, Spring Rest, Spring AOP, Node.js, React, Eclipse, , Maven, Jenkins, Restful, SOAP, JIRA, Mongo, PL/SQL, SOAP UI, JUnit, git, Linux

Client : IBM/ DOITT (Remote)

Aug 2022 – April 30 2023

Role : Senior Java Developer
(FullStack)

Project Name: DOIT/ New York City

Responsibilities:

- Involved in all phases of software development lifecycle including requirements gathering, application design, implementation, integrations, testing.
- Taken Full ownership in converting old java/j2ee web project to Spring boot, Spring JDBC, Spring Data JPA, Spring core.
- Converted project to use Java 11.
- Removed all XML spring configurations to Spring java configurations using annotations.

- Configured spring beans following the Dependency Injection (DI) and Inversion of Control (IOC) principles.
- Implemented application layer security using Spring Security.
- Used Spring Data JPA for Object Relational Mapping (ORM) solution.
- Fixed all Veracode security issues.
- Fixed SonarQube fixes.
- Performed testing by writing JUnit Test Cases.
- Performed Configuration, deployment and support of cloud services including Amazon Web Services (AWS), Open stack and VMware.
- Used Spring Core Annotations for Dependency Injection Spring DI and Spring MVC for REST API s and Spring Boot for micro-services.
- Worked on Jenkins, Git, and Eclipse for deployment on test servers and to move towards CI/CD.
- Developed DAO components using Hibernate.
- Provide tuning recommendations for Web sphere Portal & Application Server (Thread Pools and TCP/IP Parameters)
- Proficient in using git commands for version control, extensive experience with branching strategies
- Successfully managed Azure DevOps pipelines for building and testing and deploying Java applications, integrated various essential components such as unit tests, code quality analysis(sonar), Vulnerabilities (Vera code) and artifacts generation.
- In conjunction with Azure DevOps pipelines, I have utilized build tool like maven to get dependencies and build commands.
- Created APIs using SOAP and REST implementing JAX-RS annotations.
- Used JSP's in the presentation tier along with various Spring tags, JSTL tags, CSS and JavaScript.
- Worked with Web Logic as application server and Tomcat as web server.
- Database connection was made using properties files.
- Involved in the analysis, design, and development and testing phases of Software Development Life Cycle.
- Worked in Agile TDD environment using SDLC tools like Git, Jenkins, maven for build packaging and deployments of the application components.
- Used Web services for sending and getting data from different applications using SOAP messages.

Environment: Java 11, Spring Boot, Spring JPA, Spring JDBC, Spring 5.x, SOAP, RESTful, HTML, CSS3, JavaScript, Servlets 3.0, JSP, Azure Devops, Eclipse 4.4, JQuery, Oracle 11g, AJAX, GIT, Maven, JUnit 4, Logback.

Client :Cognizant/PNC bank. Mar 2021 – April 2022

Role : Sr. Java Developer (Full Stack)

Responsibilities:

- Involved in various phases of Software Development Life Cycles (SDLC) like Design, Development and testing phases, and developed Use Case diagrams, Class diagrams, and Sequence diagrams.
- Used, participated in Agile Methodologies for design and development of the applications.
- Improved the performance of the backend batch processes using Multithreading and concurrent package API.s
- Developed client/server and N-tier web applications using Java, J2EE, Apache Struts framework and Spring (MVC) framework.
- Worked on the migration of a legacy application which was built in Struts to spring based application.
- Involved in the Development of Spring Framework Controllers. Developed Controller for request, response paradigm by Spring Controllers using Spring-MVC.
- Experience in cross platform development using DOJO and used Jenkins for CI/CD.
- Used spring config server for centralized configuration and Splunk for centralized logging. Used Concourse and Jenkins for Microservices deployment.
- Utilized Python for scripting and automation, improving development workflows and enhancing efficiency.
- Developed Python scripts for tasks like data manipulation, file handling, and system automation.
- Used Spring Data, JPA and Hibernate to create light weight web and app integration layer.

- Worked extensively on the spring framework, implementing Spring MVC, Spring Security, IOC (dependency injection) and Spring AOP.
- Experienced in Front End frameworks such as jQuery, Ajax, JavaScript, NodeJS, ReactJS, BackboneJS and AngularJS.
- Used spring integration for integrating the application with Microservices using spring integration workflow files.
- Worked on the frontend to fix bug and implement new features (EmberJS).
- Used Postman to test the REST Services.
- Worked on service-oriented systems that utilize REST web frameworks, SOAP and message queue technologies (Spring MVC 4, Spring REST Template, ActiveMQ server, Spring Integration).
- Used J2EE design patterns like DAO, DTO, and Service Locator etc.
- Created Spring MVC - REST based JSON Services, used Rest Template for making a client call to JAX-RS web services with JERSEY implementation.
- Experience with Docker Containers, leveraging Linux Containers and AMI's to create Docker Images/containers and kubernetes.
- Used Angular http service for server communication and seamless user experience.
- Used micro service architecture, with Spring Boot-based services interacting through a combination of REST and MQ and leveraging AWS to build, test and deploy Identity microservices.
- Amazon EC2 is also used for deploying and testing the lower environments such as Dev and Test.
- Worked with AWS cloud service in creating EC2 instances and providing them roles and sometimes participated in writing custom policies and deployed applications on Elastic Bean Stalk and EC2.
- Worked with Docker to deploy Micro-services in modern containers to increase Isolation.
- Used Redis as a distributed key-value store to track concurrent user activities on a given loan account.
- Employed Python libraries such as Pandas and NumPy to perform data analysis and manipulation tasks, facilitating data-driven decision-making within Java projects.
- Combined Python's data processing capabilities with Java's application development expertise to build comprehensive solutions.
- Exposed REST endpoints using Camel REST DSL.
- Involved in developing AngularJS directives to do reusable UI components.
- Experience in handling messaging services using Apache Kafka.
- Experience in creating and configuring Fargate task definitions, defining resource requirements, and specifying container images.
- Proficient in leveraging Fargate to automatically provision and manage the underlying infrastructure, including compute resources and networking.
- Experience in setting up EFS file systems and mounting them within Fargate containers to enable persistent storage for Java applications.
- Integrated ELB with Fargate services to distribute incoming traffic across multiple instances or containers, ensuring scalability and high availability.
- Proficient in defining target groups, health checks, and routing rules within ELB to efficiently balance traffic and handle application requests. Used Tomcat for the web deployments.
- Worked on AWS cloud services like EC2, S3, and EBS for installing, configuring and auto scaling.
- Used Oracle as Database and used Toad for queries execution and Involved in writing SQL scripts, PL/ SQL code for procedures and functions.
- Prepared Unit test cases using JUnit and integration testing.
- Used GIT and SVN for source control and Jenkins for continuous integrations.
- Worked on Jira for User requirements and used Jira as bug tracking tools.

Environment: Java 1.8/J2EE, Linux, Apache Camel, HTML, Spring 4.0, SOAP, RESTful, Agile Methodology, Spring Boot, MicroServices, CSS3, JavaScript, Servlets 3.0, AngularJS, AWS, S3, EC2, Eclipse 4.4, JQuery, Unix Shell Scripting, Oracle 11g, AJAX, Apache Tomcat 8.0, GIT, SVN, Docker, Maven, Gradle, JUnit 4, Log4j, Jira, Jenkins.

Responsibilities:

- Designed the Web Application Using Spring MVC (Model View Controller) pattern to make it extensible and flexible.
- Analyzed, designed, implemented web-based application using Java, JPA, JSP, spring, XML, and SQL.
- Used Agile methodologies during the complete project life cycle.
- Implemented and developed UI components using Angular JS features like Dependency Injection, Models, data binding, and controllers.
- Involved in CI/CD process using GIT, Nexus, Jenkins job creation, Maven build Create Docker image and deployment in AWS environment.
- Helped in preparing the design documents like process flow, sequence, component diagram.
- Implemented DIM Web service using Spring Framework.
- Built the internal tool and maintained with React JS along with Flux and Redux.
- Used Agile methodology XP for development using User Stories.
- Worked on setting up and configuring AWS EMR Clusters and Used Amazon IAM to grant permissions on AWS resources to users.
- Enhanced application performance by Angular 6 Component based development in view of future Angular framework transitions.
- Used annotations in the complete project development, web services, MVC design.
- Used JMS for consuming pin verification, device connect disconnect messages.
- Used JPA as data persistence API for all the DAO, database operations.
- Involved in performing Cassandra tables with different replication strategies and mappings and writing CQL queries and interacted with the DB using Cassandra template.
- Implemented code according to coding standards and Created AngularJS Controller, which Isolate scopes perform operations.
- Experience in automated deployment tool such as service Kubernetes which is use to deploy quickly and predictably.
- Created, adjusted, and maintained reusable UI Components with Angular.
- Used Maven project management tool for build and deployment of the application.
- Used spring quartz timer to load the DIM data base with device battery information on regular intervals of time.
- Developed Spring REST Web services for opening, closing the locker door web service operations.
- Work mostly in the front-end building UI components in Ember, using HTML5, CSS3 and Bootstrap framework for templating and JavaScript/Ember.JS for client-side functionality.
- Developed API for using AWS Lambda to manage the servers and run the code in AWS.
- Wrote lots of JSP's for maintains and enhancements of the application. Worked on Front End using Servlets, JSP and backend using Hibernate.
- Used jQuery, Angular JS and Node JS to develop the rich user interface and to invoke Restful Web Services to perform various operations.
- Integrated Python with Java-based web applications to implement additional features, such as dynamic content generation or real-time data updates.
- Used Spring Cache Abstraction and Eh cache to reduce the number expensive executions.
- Developed rule modules using Rule Engines, Drools.
- Used Subversion (SVN), Clear Case as source controls.
- Bootstrapping Applications using Spring Boot.
- Bootstrapping Applications Spring Boot CLI.
- Integrated third-party services using Python scripts to enhance the capabilities of Java-based applications.
- Involved in write application level code to interact with APIs, Web Services using AJAX, JSON and XML.
- Established continuous integration (CI) practices and standards for PSCU with Jenkins.
- Spring XML configuration for Camel Integration to messaging XML documents.

- Implemented the Model View Control (Confidential) structure using Spring and AngularJS.
- Utilized various JavaScript and jQuery libraries, AJAX for form validation and other interactive features.
- Parse XML documents like Device Connect, disconnect messages using JAXB.
- Used Microsoft Visio to design the work flows and sequence diagrams, class diagrams.
- Writing unit and integration tests with Mockito framework.
- Used Jenkins and AWS Code Deploy plug-in to deploy the application into AWS cloud.
- Used Elastic Search as backend for developing an analytics solution to customers.
- Optimized the full text search function by connecting to Oracle and Elastic Search.
- Used Angular Resource and http services to retrieve the data from server and to display the content on the browser and took part in creating custom reusable components.
- Designed and implemented the UI components using Ext JS for file storage and maps using Open layers.
- Involved in Testing in Agile Development Environment, Using TDD and ATDD approach.
- Involved in deployment of the application at various environments (Development, Testing, Staging, and Production).
- Used log4j for logging.

Environment: JDK 1.6, Agile, Spring Boot, Cache Abstraction, Angular js, AWS, REST Web Services, tomcat 6, Cassandra, Spring MVC, Drools, JPA, Maven, JUnit, Log4j, HTML 5, CSS3, JavaScript, EmberJS, JSON, JMS, DB Visualizer, WebLogic, UML, Mockito, JSP, XML, JAXB, Unix, Subversion(SVN), Jenkins.

Client: Chubb insurance, Warren, NJ

Aug 2016 – May 2018

Role: Java Developer

Responsibilities:

- Involved in gathering requirements from Business Team and onsite coordinator.
- Prepared Technical Design documents and Detail Design Document.
- Developed the application using Agile Scrum methodologies.
- Designed and developed using Java, Spring MVC, and Hibernate.
- Developed a full stack application with express framework in node.js environment.
- Integrated Auditing Framework using Spring AOP.
- Generated Jasper reports.
- Involved in building and maintaining cloud based infrastructure on AWS.
- Developing custom HTML elements using Angular JS custom directives.
- Designed and prepared custom tags on the JSF layer and prepared framework classes for Managed Beans interacting with the Hibernate.
- Designed and developed Business Services using Spring Framework (Dependency Injection) and DAO Design Patterns.
- Configured Swagger-UI registered Micro service with Eureka server to monitor service health check from Spring Boot admin console.
- Created Typescript reusable components and services to consume REST API's using Component based architecture provided by Angular 2.
- Worked on some of the new features of Angular 4 like new if else syntax, ng-templates, form validators.
- Worked with unit testing of all java classes using JUnit framework.
- Performed server migration using cloud services like AWS from physical to cloud environment.
- Prepare the POCs and helped team in triaging the technical issues.
- Developed UI using JavaScript, JQuery, CSS3, HTML5, and Responsive Web Design.
- Used SOAP Web services to retrieve required data provided by other systems.
- Implemented workflow for Admin reviews.
- Implemented unit test for testing Angular components with frameworks using KARMA and JASMINE.
- Worked on sql queries, stored procedures in PL/SQL.
- Used Maven for building and Jenkins for deployment of the application.

- Created Junit Test Cases and the maintained good code coverage.
- Worked on sql queries, writing and procedures in PL/SQL.
- Implemented UI 508 features in application.
- Actively involved in Functional, Integration testing and Bug fixing.

Environment: Java1.5, Spring 2.5, Spring Security 2.0, Angular, Jasper Reports, JMS, Eclipse 3.2, I Report 3.1, SVN, Win Merge, Find Bugs, Jenkins, Star UML, DB2, Struts, JSP, XML,EJB, JDBC,MQ Series, Unix.

Client: Bank of America, Charlotte, NC

Nov 2014 – July 2016

Role: Java Developer

Responsibilities:

- Designed Use Case Diagrams, Class Diagrams, Sequence Diagrams and Object Diagrams to model the detail design of the application using UML from the requirements.
- Developed Microservices, REST web services.
- Worked on Front end by using AngularJS, JavaScript.
- Followed Agile Methodology to produce high Quality software and satisfy the customers.
- Developed the presentation layer (UI) using JSP, Tag libraries, JSF, HTML, CSS and client validations using JavaScript, Ajax and JQuery.
- Experience in Microservices-Spring Boot, Pivotal Cloud Foundry and Spring Boot.
- Developed JSF portlet for e-docs and integrated with WebLogic Portal application using WSRP.
- Created JMS Queue Senders and Receivers, Session Beans, Message Driven Beans.
- Worked on integrating PDAO with back end applications using web services and JMS messaging through MQ server.
- Used AngularJS as the development framework to build a single-page application.
- Documented Rest API using Swagger Tool.
- Created new User Interface for credit card application.
- Implemented MVC architecture using Jakarta Struts framework.
- Developed Web Services to communicate to back end applications using XML based SOAP and WSDL protocols.
- Implemented several design patterns such as Business Delegate, MVC, Singleton and Factory to resolve the most common design issues.
- Involved in fixing defects and troubleshooting issues on UNIX environment and wrote Shell scripts to automate jobs.
- Involved in Production support of the application.

Environment: Java1.5, JSF1.2, Rich Faces 3.2, Web Services, Apache Axis 2, JavaScript, Unix, Sybase 12.5, GlassFish, Eclipse 3.2, CVS, Win Merge, Find Bugs, Soap UI.

Client: Screatives, India

Oct 2013 – Sep 2014

Role: Software Developer

Responsibilities:

- Migrating existing application into microservices architecture using Rest APIs and spring boot.
- Identified test cases to automate. Automate those test cases using selenium, TestNG and java (Eclipse IDE). Contributed in framework creation.
- Taking KT sessions from client on Application functionality and discuss with Business Analysts for integrate new functionalities with existing systems.
- Followed Scrum Methodologies throughout the life cycle of the Project. Familiar with Agile methodology, Daily Scrums and Sprint reviews.
- Used GIT for version control.
- Worked with QA team during various testing phases and resolved defects.
- Written JUnit Test cases with Mockito while performing unit testing.

- Attended every day Scrum meetings to provide current project status demonstrations in every two weeks.
- Implemented Agile Methodology (Scrum) with Test Driven Development.
- Used Maven build script to create and deploy the release builds.

Environment: Core Java, J2EE 1.3, JSP 1.2, Servlets 2.3, EJB 2.0, Struts 1.1, JNDI 1.2, JDBC 2.1, Oracle 8i, UML, DAO, JMS, XML, WebLogic 7.0, MVC Design Pattern, Eclipse 2.1, Log4j and JUnit.
