

Sarika B
Healthcare Data Analyst
Contact: +1(703)-646-0080
E-Mail: sbollinenidt@gmail.com

PROFILE SUMMARY

- Over 6+ years of IT Experience as a Data Analyst for Online Transaction Processing (OLTP) and Online Analytical Processing (OLAP) systems for data warehousing, with good knowledge and expertise in all Software Development Life Cycle (SDLC) methodologies like Waterfall, Agile Scrum, in phases including analysis, design, development, testing, and maintenance.
- Expertise in SQL, Python, and proficiency with data visualization tools like Tableau and Power BI.
- Extensive experience in creating interactive visuals using the Power BI reporting tool and knowledge of Tableau.
- Created and managed collaborative SharePoint sites for cross-functional teams, ensuring seamless data sharing and centralized access to critical project documentation.
- Prepared technical reports and conducted training sessions to summarize data analysis findings, provide actionable insights, and familiarize teams with new data models and analytical tools.
- Involved in various projects related to Data Modeling, System/Data Analysis, Design and Development for Data warehousing environments.
- Experienced in creating comprehensive reports and interactive dashboards to support decision-making.
- Experience in leading BI projects and mentoring junior analysts, fostering a collaborative and growth-oriented team environment.
- Proficiency in deploying Row-Level Security (RLS) in Power BI to limit access to data according to user responsibilities and guarantee adherence to security and privacy regulations.
- Developed conceptual, logical, and physical data models to align business requirements with database solutions.
- Utilized Cascade to align data analytics projects with organizational strategic goals, ensuring measurable outcomes and data-driven decision-making.
- Cataloged and maintained data assets across multiple platforms, ensuring proper organization, accessibility, and security of all critical business data.
- Led the automation of ETL processes using AWS Glue and designed Spark-based pipelines to efficiently transform and load large volumes of raw data into Snowflake, ensuring accurate and streamlined data storage and retrieval for analytical systems.
- Experience with Tableau Prep for data preparation and ETL processes to streamline data workflows
- Implemented version control and permission settings in SharePoint Online to maintain data integrity and security.
- Proactively participated in special projects and additional duties to drive organizational success.
- Familiar with utilizing SSIS features such as data flow transformations, control flow tasks, and package configurations to create efficient data transfer solutions tailored to specific database environments and integration scenarios.
- Implement error handling and data validation steps in Power Query to ensure that data loaded into Power BI is accurate, clean, and reliable
- Engaged with internal partners to understand business strategy, goals, and risks, translating requirements into actionable analytical project plans and leading projects to completion.
- Demonstrated ability to support strategic decision-making by providing deep insights through comprehensive data analysis and reporting.
- Excellent problem-solving skills with strong technical, analytical and good interpersonal skills.

Education:

04/2017 - JNTUA
Bachelor of Degree (ELECTRONICS COMMUNICATION ENGINEERING)

TECHNICAL SKILL SUMMARY

Analysis Tools	Power BI, Tableau, Prep Alteryx, MS SSAS, SSIS, SSRS (V Lookup, Pivot)
Databases	Snowflake, SQL Server, Teradata, Oracle, MongoDB
Visualization Tools	Power BI & Tableau, MicroStrategy, Excel, Alteryx
Testing Tools	Selenium, UFT, JMeter, Junit, TestNG, APPIUM
Languages	Core Java, SQL, T-SQL, Basic Python
ETL Tools	SSIS
Operating Systems	Windows (Family), IOS, Linux
Cloud Technologies	Azure, Aws

Professional Experience:

Client: Freedom Mortgage Corporation– Chantilly,VA

DEC 2023 – Present

Role: Healthcare Data Analyst

Responsibilities:

- Responsible for analyzing data from multiple EDC platforms (Rave, Inform, IBM CD etc.) and analyze having a primary focus on the business view of data, its true meaning and how it will ultimately be consumed.
- Analyzed data from various EDC platforms, such as Rave, Inform, and IBM CD, with a primary focus on understanding the business perspective, interpreting the true meaning of data, and considering its ultimate consumption.
- Designed and implemented data models, including star and snowflake schemas, to optimize data warehousing solutions for clinical trial datasets.
- Develop ETL processes in AWS Glue to transform raw clinical trial data from multiple sources into standardized formats, ensuring consistency and accuracy for further processing
- Design and manage a centralized data lake in AWS (e.g., using Amazon S3) to store clinical trial data from multiple EDC (Electronic Data Capture) systems, ensuring secure, scalable, and cost-effective storage solutions
- Developed and delivered impactful visualizations and presentations to translate analytical findings into actionable business solutions.
- Applied data mining techniques to uncover patterns and trends within clinical data, supporting predictive analytics and strategic decision-making.
- Demonstrated the ability to learn and implement data analytics platforms efficiently, contributing to timely project delivery and success
- Assisted in the analysis and documentation for the migration of EDC Systems data from Hive DB to Snowflake DB.
- Utilize Power Query for data extraction, transformation, and loading (ETL) within Power BI
- Design and implement Row-Level Security in Power BI reports to ensure that users can only access data

relevant to their role or region, safeguarding sensitive information

- Conducted system analysis and retrieved Clinical, Metadata, and Admin XML data through Postman API calls to EDC systems.
- Efficiently learned and applied new features of AIBI Lakeview and Databricks to optimize data workflows and improve reporting accuracy
- Consolidated multiple clinical and Metadata XML data within the same EDC system, creating useful Excel files for further data analysis.
- Utilized Spark's distributed processing capabilities for big data analytics tasks, enabling large-scale data processing and complex transformations that enhanced data insights.
- Use Amazon Quick Sight to create interactive, real-time dashboards and reports for end users and customers, allowing research and data management teams to monitor clinical trial data trends and performance
- Integrated MicroStrategy with other BI tools and data warehouses, such as Tableau, Power BI, and RapidMiner to create a cohesive analytics ecosystem
- Designed and implemented data models in MicroStrategy to support complex reporting requirements, ensuring data integrity and performance optimization
- Conducted performance tuning of MicroStrategy objects and SQL queries to ensure efficient data retrieval.
- Generated source-to-target mapping (STTM) documents with transformation logic for constructing case report form tables and maintained them in the document repository.
- Performed data analysis on legacy Oracle DB to establish data migration requirements for Custom Data view to Snowflake Database.
- Ensure the accuracy and quality of data through rigorous testing and validation processes, utilizing DAX, R, and Python to identify anomalies and inconsistencies
- Created SQL queries and supported QA and UAT teams by providing clarifications on requirements and mapping documents.

Environment: Power BI, Data tools, SQL server, ETL, SSRS, JIRA, Excel, BI Builder, DAX, Lookup, BI service, AI/BI, Data Bricks

Client: CDW- Dallas, TX **OCT 2022 –NOV 2023** Role: **DATA REPORTING ANALYST.**

Responsibilities:

- Analyzed datasets from multiple data marts and platforms, focusing on the business perspective, understanding the true meaning of data, and anticipating its ultimate consumption.
- Performed as a pivotal link between business stakeholders and technical teams, facilitating seamless collaboration and communication for reporting and analytics initiatives.
- Gather, define, and document business and solution requirements while analyzing data from source systems.
- Optimize the performance of complex data models and queries in Power BI by refining DAX measures and using Python for parallel processing
- Create, optimize, and troubleshoot complex DAX formulas for generating insightful metrics, KPIs, and interactive visualizations in Power BI
- Analyzed and maintained key data assets that provided insights for strategic decisions, ensuring data was readily available for business stakeholders.
- Utilize AWS Auto Scaling for EC2 instances, RDS to dynamically adjust the computational resources required during peak data processing times, ensuring performance stability

- Analyzed historical data trends using data mining techniques to forecast outcomes and improve operational strategies.
- Tracked progress and analyzed key performance metrics within Cascade to evaluate project success and recommend optimizations.
- Create dynamic and efficient data models using Power Query, integrating data from diverse sources, and ensuring that the data is structured for effective analysis and reporting.
- Conducted source system analysis on Oracle, Teradata, and SQL Server databases for applications requiring integration into the Warehouse, using SQL Developer and SSMS.
- Created SSIS packages for Extracting and Loading data into Warehouse Staging and created T_SQL procedures using automated templates to move data into other layers of the Warehouse.
- Schedule and maintain ETL jobs using SQL Server Agent, validating data movement by confirming adherence to business rules.
- Conduct exploratory data analysis (EDA) using R and Python to uncover patterns, correlations, and trends that inform business decisions.
- Utilize STAR schema architecture and dimensional modelling to construct SQL queries necessary for data movement and reporting.
- Document analysis outcomes and generate and present reports using Power BI and Tableau reports.
- Facilitate dashboard test specifications, ensuring that recommended reports align with targeted business outcomes.
- Implemented secure file transfers using AWS Transfer Family (SFTP/FTPS) to share sensitive clinical trial data with external vendors and partners, maintaining data integrity and security
- Troubleshoot issues related to data transformation, refresh failures, and RLS configurations, providing solutions to ensure data accuracy and security in Power BI reports

Environment: SQL server, Visual Studio, Power BI, ETL, SSRS, JIRA, Excel, BI Builder, DAX, Lookup

Client: CGI -Bengaluru, IN

OCT 2019 –AUG 2022

Role: Data Analyst

Responsibilities:

- Gather, compile, and ensure accurate and timely entry of disciplinary case data into the database using (SSMS) and Excel, and draw the requirements for the newly built system OLTP and ODS databases.
- Utilize data modelling tools to analyse and understand data architecture by reverse engineering logical, and physical models.
- Review and creation of data artifact documents that contain Data models, Data mapping, Data dictionaries, and Metadata. It has
- documented various requirements based on the changes that occur day to day.
- Identify and implement improvements in data collection, management, and reporting processes using ETL tools such as SSIS to enhance efficiency and accuracy.
- Analysed trends, patterns, and anomalies in disciplinary cases to identify common types of misconduct and their prevalence.
- Collaborate with the Disciplinary Directorate and other stakeholders, utilizing Microsoft Teams and SharePoint for effective communication and data sharing.
- Tested PL/SQL delta load packages by building test queries in all the environments.
- Maintain detailed documentation of data sources and methodologies and provide training and support on data reporting tools and best practices to team members and stakeholders.
- Research and document data flows, document application integration solutions, ETL, SQL, etc.
- Provide thought leadership regarding Industry practices around collecting data, staging data, cleansing data, standardizing data, and publishing data into data marts.

- Develop and maintain dashboards and reports using Tableau, Power BI, and Excel, providing insights into disciplinary processes and outcomes.

Environment: ETL, Jira, SSMS, OLAP, OLTP, Tableau, Excel, Power BI

Client: VHS Consulting India Pvt.Ltd, Bengaluru,IN

JUN 2018 – SEP 2019

Role: SQL Developer

Responsibilities:

- Creating robust database structures that support organizational needs, including writing complex SQL queries, stored procedures, and functions.
- Enhancing database performance by optimizing queries, indexing, and troubleshooting issues to ensure efficient data retrieval and manipulation.
- Implementing measures to maintain data accuracy and protect against unauthorized access, ensuring compliance with security standards.
- Working closely with cross-functional teams, including software developers and database administrators, to integrate databases into applications and support data-driven decision-making.
- Preparing comprehensive documentation of database designs, configurations, and procedures to facilitate maintenance and future development.
- Executed SQL queries on DB2 and SQL tables to view successful transactions of data and to validate data.
- Communicated with the client for issues and clarifications.

Environment: Oracle, MySQL, and SQL Server
