

Derek Laporte

Glendale, CA

dereklaporte07@gmail.com • linkedin.com/in/derek-laporte-22b254328

Senior Full Stack Engineer

Top Skills

Technical Skills :

- Programming Languages: HTML5, CSS3, JavaScript (ES6+), TypeScript, Python, Java, C++
- Frontend Frameworks/Libraries: React.js, Angular, Vue.js, Next.js
- Backend Frameworks/Libraries: Node.js, Express.js, Django, Flask, Spring Boot, Spring Framework, Spring Cloud, Spring Security, FastAPI
- State Management: Redux, NgRx, Vuex
- CSS Preprocessors & Frameworks: Sass, Less, Bootstrap, Tailwind CSS
- Build Tools & Module Bundlers: Webpack, Babel, npm, Yarn, Maven, Gradle
- Version Control: Git, GitHub
- Testing: Jest, React Testing Library, Jasmine, Mocha, Chai, JUnit, Mockito
- RESTful APIs & GraphQL
- Performance Optimization: Code splitting, lazy loading, bundle optimization
- Responsive Web Design
- Cross-Browser Compatibility
- Web Accessibility (WCAG 2.1)
- UI/UX Design Principles
- Progressive Web Apps (PWA)
- Server-Side Rendering (SSR)
- Frontend Build & Deployment: CI/CD, Jenkins

Additional Technical Skills :

- Backend Technologies: Node.js, Express.js
- Databases: MongoDB, PostgreSQL, MySQL, Amazon RDS, Amazon DynamoDB
- Cloud Platforms: AWS, Azure, Google Cloud Platform
- AWS Services: EC2, S3, Lambda, CloudFront, Route 53, ECS, EKS, CloudFormation, IAM
- Containerization: Docker, Kubernetes, Amazon ECS, Amazon EKS
- Agile Methodologies: Scrum, Kanban
- Microservices Architecture
- Serverless Computing: AWS Lambda, API Gateway
- Message Queuing: Amazon SQS, Apache Kafka
- Caching: Redis, Amazon ElastiCache
- Monitoring and Logging: CloudWatch, ELK Stack (Elasticsearch, Logstash, Kibana)
- Infrastructure as Code: AWS CloudFormation, Terraform
- Content Delivery Networks (CDN): Amazon CloudFront
- Spring Ecosystem: Spring MVC, Spring Data JPA, Spring Security, Spring Cloud

Work Experience

Photon, Chicago, Illinois, US

Senior Full Stack Engineer

08/2023-Present

- Spearheaded the development of a high-performance, responsive single-page application (SPA) using React.js and Redux, resulting in a 40% increase in user engagement
- Implemented server-side rendering (SSR) with Next.js to improve initial page load times by 60% and enhance SEO performance
- Architected and developed RESTful APIs using Node.js and Express.js, integrating with MongoDB and Amazon DynamoDB for efficient data management
- Utilized GraphQL to optimize data fetching, reducing API calls by 30% and improving overall application performance
- Implemented advanced state management techniques using Redux Toolkit and React Hooks, enhancing code maintainability and scalability
- Developed and maintained a comprehensive UI component library using Storybook, improving team efficiency and ensuring consistent design across projects
- Implemented automated testing strategies using Jest and React Testing Library, achieving 90% code coverage
- Optimized frontend performance through code splitting, lazy loading, and efficient bundling techniques using Webpack
- Led the migration of legacy codebase to TypeScript, improving code quality and reducing bugs by 25%
- Mentored junior developers in frontend best practices, conducting code reviews and pair programming sessions
- Implemented AWS Lambda functions for serverless backend operations, improving scalability and reducing operational costs
- Utilized Amazon S3 for efficient storage and retrieval of static assets, enhancing application performance

Hyatt Hotels Corporation, Chicago, Illinois, US

Senior Frontend Developer

07/2022-07/2023

- Developed and maintained a large-scale hotel booking platform using Angular 12, resulting in a 35% increase in online reservations
- Implemented responsive design principles using CSS Grid and Flexbox, ensuring seamless user experience across devices
- Utilized RxJS for efficient state management and handling of asynchronous operations in Angular applications
- Integrated third-party APIs for payment processing, maps, and user authentication, enhancing platform functionality
- Implemented progressive web app (PWA) features, improving offline capabilities and mobile performance
- Developed custom Angular directives and pipes to enhance code reusability and maintainability

- Optimized application performance through lazy loading of modules and efficient change detection strategies
- Implemented accessibility features following WCAG 2.1 guidelines, improving the platform's usability for all users
- Utilized NgRx for state management in complex Angular applications, improving scalability and maintainability
- Implemented continuous integration and deployment (CI/CD) pipelines using Jenkins and AWS CodePipeline, streamlining the development process
- Leveraged Amazon CloudFront for content delivery, significantly improving global access speeds

Integral Ad Science, New York, New York, US
Full Stack Engineer

10/2018-06/2022

- Developed and maintained a real-time ad analytics dashboard using Vue.js and Vuex, processing over 1 million data points per day
- Implemented server-side logic using Node.js and Express.js, integrating with PostgreSQL for efficient data storage and retrieval
- Utilized WebSocket technology for real-time data updates, enhancing user experience and data accuracy
- Developed RESTful APIs following OpenAPI specifications, facilitating seamless integration with third-party services
- Implemented authentication and authorization using JSON Web Tokens (JWT) and OAuth 2.0
- Optimized frontend performance through efficient DOM manipulation and virtual DOM techniques
- Utilized Docker for containerization, ensuring consistent development and deployment environments
- Implemented automated testing using Mocha and Chai for backend, and Vue Test Utils for frontend components
- Developed data visualization components using D3.js, providing interactive and insightful analytics to clients
- Implemented microservices architecture using Kubernetes, improving system scalability and fault tolerance

Mphasis, San Jose, California, US
Backend Developer

09/2017-09/2018

- Developed and maintained RESTful APIs using Java Spring Boot, serving over 100,000 requests per day
- Implemented database optimization techniques in MySQL, improving query performance by 40%
- Utilized Apache Kafka for building real-time data streaming pipelines, enhancing system responsiveness
- Implemented caching strategies using Redis, reducing database load and improving response times

- Developed microservices using Spring Cloud, improving system modularity and scalability
- Implemented automated testing using JUnit and Mockito, achieving 85% code coverage
- Utilized Hibernate ORM for efficient database operations and entity management
- Implemented logging and monitoring solutions using ELK stack (Elasticsearch, Logstash, Kibana)
- Developed batch processing jobs using Spring Batch for efficient data processing and ETL operations
- Implemented security measures including input validation, SQL injection prevention, and XSS protection

TOMS, Los Angeles, California, US
Software Engineer

04/2015-08/2017

- Developed and maintained an e-commerce platform using React.js and Redux, resulting in a 25% increase in online sales
- Implemented responsive design using CSS preprocessors (Sass) and mobile-first approach
- Utilized Webpack for module bundling and optimizing frontend asset delivery
- Implemented server-side rendering (SSR) using Next.js to improve SEO and initial page load times
- Developed RESTful APIs using Ruby on Rails, integrating with PostgreSQL for data persistence
- Implemented automated testing using Jest and Enzyme for React components
- Utilized Git for version control and implemented GitFlow workflow for efficient team collaboration
- Implemented continuous integration using Travis CI, ensuring code quality and reducing deployment errors
- Developed custom React hooks for shared functionality across components, improving code reusability
- Implemented internationalization (i18n) support using react-intl, expanding the platform's global reach

Google, Santa Clara, California, US
Software Developer

08/2013-03/2015

- Contributed to the development of Google Maps JavaScript API, improving performance and adding new features
- Implemented advanced JavaScript techniques for efficient DOM manipulation and event handling
- Utilized WebGL for rendering complex 3D maps and visualizations
- Developed and maintained internal tools using AngularJS, improving team productivity
- Implemented automated testing using Jasmine and Protractor for end-to-end testing
- Optimized frontend performance through efficient asset loading and caching strategies
- Contributed to the development of Material Design components, ensuring consistent UI across Google products
- Implemented accessibility features following WCAG guidelines, improving usability for all users

- Utilized Google Closure Compiler for JavaScript optimization and code minification
- Developed Chrome extensions to enhance browser functionality and user experience

Education

Bachelor's degree in Computer Science

2009 – 2013

University of California, Berkeley

Relevant coursework: Data Structures, Algorithms, Operating Systems, Database Management Systems, Artificial Intelligence, Machine Learning, Computer Networks, Software Engineering, Distributed Systems

Senior project: Developed a scalable, real-time collaborative text editor using WebSockets and operational transformation algorithms
