Summary:

As a Data Engineer and Python Developer with 4 years of experience delivering high-performance, scalable data solutions across cloud and on-premises environments. Expertise in building robust data pipelines, optimizing ETL processes, and leveraging cutting-edge technologies such as AWS, Spark, and Kafka to drive business-critical insights. Adept at handling vast datasets, integrating advanced analytics, and implementing automation tools to streamline operations. Proven track record of delivering innovative solutions that enhance operational efficiency, reduce costs, and foster data-driven decision-making. Known for a collaborative approach and an ability to thrive in fast-paced, cross-functional teams, consistently exceeding expectations in both technical execution and problem-solving.

Core Qualities:

- **Big Data Technologies:** HDFS, Hive, Spark, Map Reduce YARN, Spark-Core, and Spark-Sql.
- **Programming Languages:** .NET, C/C++, HTML, SQL, PL/SQL, and Scala.
- **Scripting Languages:** Shell Scripting, Bash, Power Shell, Python.
- **Operating Systems:** UNIX, Windows, LINUX.
- **Web technologies:** ASP.NET, MVC Framework.
- **Cloud Technologies:** AWS
- **Databases:** Oracle, SQL-Server, MySQL server, MS SQL, IBM DB2, MongoDB.
- **Build Tools:** ANT, Maven, Gradle, Docker and Jenkins.
- **IDE / Tools:** Eclipse, IntelliJ, Spring Tool Suite (STS)
- **Testing/Test Management:** Selenium Web Driver/ Load Runner, JIRA, Quality Center, ALM, Clear Quest, SOAP UI
- **Platforms:** Windows, Mac, Linux and UNIX
- **Methodologies:** Agile, Waterfall, Test Driven Development

Education:

- Master of Science in Data Science New Jersey Institute of Technology, NJ, USA | May 2021
- Bachelor of Engineering in Computer Engineering Dharmsinh Desai Institute of Technology, India | April 2018

Professional Experience

UnitedHealth Group, USA | Data Engineer | Sep 2024 – Present

Description: At UnitedHealth Group, I am responsible for the development and optimization of large-scale data pipelines using a variety of technologies, including AWS and Apache Kafka. My work focuses on improving data accuracy and processing speeds while maintaining a high level of system scalability to meet the needs of an ever-growing healthcare organization. Additionally, I collaborate with data scientists and business analysts to enhance data-driven decision-making through optimized ETL processes and real-time analytics solutions.

Environment: AWS, Kafka, Spark, Hadoop, SQL Server, Tableau, Docker, Git, Jenkins, Terraform, Airflow, Python, DBT, Fivetran, Informatica.

Responsibilities:

- Designed and implemented scalable data pipelines for processing and integrating data from multiple sources using AWS and Apache Kafka.
- Developed Python-based automation scripts to extract, transform, and load (ETL) large datasets, reducing processing time by 30%.
- Optimized database queries and data transformation processes, ensuring improved reporting efficiency.
- Collaborated with cross-functional teams to build real-time analytics solutions, enabling actionable insights for business leaders.
- Implemented monitoring dashboards in Tableau to track data flow performance and alert stakeholders of anomalies.

Humani Media (Client JMSC), India | Data Engineer | Jan 2023 – May 2024

Description: In my role as a Data Engineer for Humani Media, I was tasked with designing and implementing cloud-based data pipelines that support real-time media data processing. I leveraged AWS and Apache Spark to develop efficient solutions that enabled the smooth ingestion and analysis of large volumes of media data. My contributions significantly improved the speed and reliability of media data workflows, allowing the company to deliver real-time insights to clients.

Environment: AWS, Spark, Hadoop, Python, SQL, MongoDB, Jenkins, Docker, Airflow, Git, Fivetran, Tableau, DBT, Terraform, Kafka.

Responsibilities:

- Built and optimized cloud-based ETL pipelines using AWS services to ingest and process large datasets from various media sources.
- Integrated Apache Spark and Hadoop for distributed processing and ensured data integrity throughout the pipeline.
- Automated data transformations using Apache NiFi and DBT, reducing manual intervention and streamlining workflows.
- Developed and optimized SQL queries to enhance reporting and data retrieval performance.
- Created interactive dashboards in Tableau to deliver real-time insights and track key performance indicators (KPIs).

Infosys (Client Goldman Sachs), USA | Data Engineer | Aug 2021 - Oct 2022

Description: During my time at Infosys, I contributed to the design and implementation of data solutions for Goldman Sachs. My work involved creating and optimizing data pipelines for financial data processing using cloud technologies and big data tools like AWS and Apache Kafka. Additionally, I played a key role in improving data accuracy and reducing processing time, which helped ensure that critical business operations ran smoothly.

Environment: AWS, Kafka, Spark, Python, SQL, DB2, Docker, Git, Jenkins, Airflow, Tableau, Terraform, Fivetran, Informatica, Hadoop.

Responsibilities:

- Developed and optimized data pipelines to handle large volumes of financial data from diverse sources, ensuring high data accuracy and performance.
- Utilized AWS services and Apache Kafka to enable real-time data processing and reduce latency in critical operations.
- Automated data ingestion, transformation, and validation processes, achieving a 40% improvement in processing time.

Radix InfoTech Pvt. Ltd., India | Python Developer | May 2018 - Jul 2019

Description: As a Python Developer at Radix InfoTech, I developed and maintained software applications that automated key business processes. My role involved working closely with stakeholders to understand system requirements, designing Python-based solutions, and ensuring smooth integration with existing data systems. I played an integral role in streamlining business workflows, which resulted in higher efficiency and reduced manual intervention.

Environment: Python, SQL, MySQL, MongoDB, Jenkins, Git, Docker, JUnit, Selenium WebDriver, Tableau, Power BI, Apache Airflow, DBT, Kubernetes, Terraform.

Responsibilities:

- Developed Python applications to automate business workflows and data extraction processes.
- Created custom Python scripts for data transformation, reducing manual data processing tasks by 50%.
- Integrated external APIs to retrieve real-time data and synchronize it with internal systems.
