

Shawn Ali (Senior Software Engineer)
shawnali941@gmail.com

Dallas, TX
(918) 255 5099

Experience Summary

- Over 10 years OOP (C#, VB.NET) in .NET technology (framework .Net 1.0 - 4.8, .Net Core)
- 10 years in development in Asp.Net Web Forms, Web services (Soap), XML, XSLT, JavaScript, JQuery.
- Over 5 years in development Asp.Net MVC, EF, Linq, JQuery, React, SignalR.
- Over 1-year experience in multi-thread development (TPL).
- 5 years in Architecture, Design and Development of the Enterprise Solution.
- 3 years in Maintenance and Deployment web solution & database to Azure.
- Several years of development experience CMS Systems: Sitecore, Kentico, DotNetNuke.
- Small experience in Mobile Development (.Net Core 3.0)

Core Competencies

ASP.Net, ASP.NET MVC, C#, VB .NET, Microsoft Entity Framework, HTML, JavaScript, XML, JSON, CSS, SQL Server, Transact SQL, Microsoft Visual Studio, GIT

Professional Experience

Senior Software Engineer

Gaper (Aug 2023 - Present)

- Design & implementation a new software (creating structural and sequential diagrams, detailed design documentation, writing code)
- Design and implementation of the wizard application (C#, WPF, MVVM) to force the installer to update the settings of the main application, as well as some settings of the operating system of the computer on which the main application is installed.
- Enhancement and maintenance of an existing applications (C#, WPF, MVVM) for monitoring and controlling the distribution of stresses inside joint prosthesis.
- Multi-threads processing, locking procedures
- Branch management in Azure TFVC.
- Multi-threads processing, locking procedures
- Branch management

Contract Software Engineer

Bold Group (Sep 2023 - Present)

- Software Engineering Contractor at the EverCommerce/Bold Group.
- Focusing on software development for business management applications.
- Primarily helping with VB6 backlog to start, but likely to get involved in .Net, C# and SQL Server.

Senior Software Engineer

Infor (Mar 2020 - June 2023)

- Conducted full-stack development on a crucial, first-response, emergency 911 dispatching (CAD) desktop and web application, harnessing expertise in Visual Basic .Net, MVC, SQL Server, REDIS API, and SQL Server Reporting Services.
- Developed and maintained many interfaces for data migration between the CAD system and third-party software packages.
- Exhibited problem-solving prowess by swiftly incorporating SQL Server Reporting Services reports into the CAD application within an astonishing one to two-day period, overcoming a daunting challenge left by previous developers. Streamlined client workflow significantly by enabling direct report access within the CAD application, eliminating the need for navigating to a separate SQL Server Reporting Services report site.
- Delighted the client by facilitating the continued use of an unsupported Excel workbook through the proposal and development of a VB.Net utility, enabling seamless loading of SQL Server data. Slashed development time from weeks to days by eliminating the necessity to create multiple SQL Server Reporting Services reports as replacements for the workbook.
- Directly engaged stakeholders to comprehend their business objectives, systematically collecting and scrutinizing business requirements, and converting them into meticulously detailed, actionable, agile, user story type tasks.
- Boosted stored procedure performance by conducting query analysis using tools like Microsoft SQL Server Query Analyzer and SQL Server Execution Plans.

Software Developer

Westpoint Underwriters (Jan 2017 - Feb 2020)

- Carried out full-stack development on a multi-framework, home insurance management web application, employing ASP .Net, Visual Basic .Net, C#, Classic ASP, Visual Basic 6, and SQL Server.
- Showcased rapid adaptability and learning prowess by successfully completing a time-sensitive .Net/SQL Server-based insurance claims application, surpassing expectations despite lacking prior experience in insurance claims.
- Suggested initiatives to enhance a robust insurance policy renewal web application, employing cutting-edge technologies such as ASP .Net, C#, and SQL Server.
- Showcased rapid adaptability and learning prowess by successfully completing a time-sensitive .Net/SQL Server-based insurance claims application, surpassing expectations despite lacking prior experience in insurance claims.
- Suggested initiatives to enhance a robust insurance policy renewal web application, employing cutting-edge technologies such as ASP .Net, C#, and SQL Server.
- Recognized as a subject matter expert across diverse domains, sharing knowledge, and applying best practices within the organization, contributing to a culture of continuous improvement, showing leadership skills.
- Enhanced application support by proactively uncovering bugs and issues through the development of monitoring utilities for automated application environment checks.

- Streamlined the efficiency of configuring future developer PCs by documenting step-by-step instructions, accelerating the process from days to hours, and ensuring consistency across developer environments.

Software Engineer

i9Sports (Sep 2014 - Nov 2016)

- Provided full-stack development on web applications for franchise management and youth program registration, employing ASP.Net, Visual Basic .Net, Classic ASP, and SQL Server.
- Demonstrated rapid adaptability to new tools, effectively rescuing a delayed web project and steering the company away from costly consultants, leading to substantial cost savings and enhanced operational efficiency.
- Evaluated, recommended, documented, and cross-collaborated with Rackspace hosting provider to migrate web applications, bolstering system performance, reliability and Payment Card Industry security compliance.
- Streamlined processes by automating manual royalty collection through the development of Automated Clearing House Network banking transaction routines, reducing processing time from days to hours.
- Implemented comprehensive system maintenance plans, including scheduled application and database backups, optimizations, and automated log reviews, to elevate system performance, safeguard data integrity, and mitigate risks.
- Collaborated with Marketing and a local consulting firm to implement new Search Engine Optimization (SEO) features, playing a key role in improving the company's web application ranking on internet search sites.

Projects

Open Tech Strategies

Open Tech Strategies provides expert advice and services to help organizations use the advantages of open source to reach their goals.

Tech Stack: NET, React, Angular, C#

Multifamily Real Estate Investing Platform | HoneyBricks

HoneyBricks is a technology platform that connects investors with high-quality multifamily investment opportunities.

Tech Stack: React, .NET, C#

Education

Master's from Harvard University.
