Professional Summary

Results-driven Full Stack Java Engineer with over 8 years of experience designing, developing, and optimizing backend systems and microservices architectures within Agile and Waterfall environments. Worked in diverse environments with cross-functional teams to deliver the solution. Proficient in leveraging Java, Spring Boot, Hibernate, and various cloud technologies (AWS, Docker, Kubernetes) to build scalable, high-performance applications. Expertise in implementing RESTful APIs, event-driven systems with Apache Kafka, and optimizing database performance across multiple platforms including PostgreSQL, MySQL, and MongoDB. Adept at driving migrations from monolithic to microservices architectures, applying Domain-Driven Design (DDD) principles to enhance system maintainability. Strong experience in implementing secure authentication mechanisms (OAuth 2.0, JWT) and adhering to best practices for code quality through continuous integration (CI/CD) pipelines and test-driven development (TDD). Proven ability to collaborate with cross-functional teams, mentor junior developers, and ensure seamless integration of front-end and back-end systems. Committed to delivering robust, maintainable, and efficient solutions that align with business goals and technical standards

EDUCATION

Augustana College — Bachelors in Computer Science

TECHNICAL SKILLS

Programming

Languages: Java 8+, SQL, Python, Java Script

Frameworks: Spring Boot, Spring MVC, Spring Data, Spring Security, Hibernate, JPA, Angular

Web Services: RESTful APIs, SOAP

Cloud Technologies: AWS (S3, EC2, Lambda, CloudWatch, RDS)

DevOps Tools: Jenkins, Docker, Kubernetes, Git, SonarQube, JIRA

Databases: Oracle, PostgreSQL, MongoDB, MySQL

Messaging Systems: Kafka, RabbitMQ

Testing Tools: JUnit, Mockito, Postman

Development Practices: Agile (Scrum), TDD, CI/CD

Other Tools: Maven, Gradle, IntelliJ IDEA, Eclipse, Swagger

PROFESSIONAL EXPERIENCE

Java Full Stack Engineer, Southern Company (Remote)

April 2022 to Present

- Followed Agile Software Development practices using Scrum methodology. Utilized Agile Craft to create, update, and manage user stories, ensuring alignment with sprint goals and project timelines.
- Collaborated with Product Owners, Senior Architects, Scrum Masters, and cross-functional team members during Program Increment (PI) planning sessions. Participated in sprint grooming, sprint planning, retrospectives, and daily stand-ups to ensure efficient project execution.
- Architected and developed **microservices** using **Spring Boot** to transition from monolithic applications, improving scalability and maintainability. Led the migration of legacy applications to a microservices architecture following **Domain-Driven Design (DDD)** principles.
- Designed and developed dynamic web applications and interactive **UI components** using **Angular**. Built reusable components, directives, and services to enhance modularity and maintainability. Implemented **lazy loading**, **reactive forms**, and **state management** using **RxJS** and **NgRx** to improve performance and scalability.
- Developed and optimized **JavaScript** functions to handle dynamic front-end behaviors, improving page performance and responsiveness. Utilized **ES6+ features** such as **promises**, **async/await**, and **arrow functions**. Implemented **client-side validation**, **DOM manipulation**, and **event handling** to enhance UI interactions.
- Optimized database performance by implementing advanced **SQL queries** and **indexing**, reducing query execution time by 40%. Utilized **MongoDB** for NoSQL storage to manage unstructured data efficiently.
- Designed and developed **RESTful APIs**, ensuring seamless communication between front-end and backend systems. Optimized API performance and ensured smooth integrations across **microservices** by following **API governance strategies** and maintaining security standards.
- Integrated **Apache Kafka** into microservices to enable real-time alerts and notifications, improving system responsiveness and enabling event-driven communication between services.
- Designed and implemented a **JSON Web Encryption (JWE)** security framework to secure sensitive data in transit across microservices and external APIs.
- Built and deployed services on **AWS** cloud infrastructure, leveraging **EC2**, **S3**, **RDS**, and **Lambda** for scalable solutions. Implemented **CI/CD pipelines** using **Jenkins** and **Docker**, streamlining the deployment process and ensuring continuous integration.
- Conducted application design reviews and code reviews, providing valuable feedback to ensure code quality, adherence to best practices, and maintainability. Automated testing using **JUnit**, **Mockito**, and **Automation Development Platform (ADP)**, maintaining high test coverage and ensuring robust, bug-free code through continuous integration with **Jenkins** and **SonarQube**.

Java Full Stack Engineer, United Health Group (Remote)

Sept 2019 to April 2022

- Facilitated Agile Scrum ceremonies, including daily stand-ups, sprint planning, and retrospectives to enhance team productivity.
- Developed and maintained enterprise-grade applications using Spring Boot, Spring MVC, Spring REST, Hibernate, JPA, and PostgreSQL.

- Designed and implemented RESTful APIs to facilitate seamless communication between microservices, adhering to API governance standards.
- Utilized Postman and Swagger for API testing and validation of HTTP requests such as GET, POST, and PUT.
- Led a team of 5 engineers, mentoring junior developers on best practices in Java development and code optimization.
- Implemented caching strategies using Redis to enhance system performance and reduce latency.
- Applied Java Collections (HashMap, List, Streams) and Java 8 features to process and manage data efficiently.
- Created DAO classes to perform CRUD operations using Spring Hibernate and JPA, ensuring efficient database interactions with MySQL, Oracle, and PostgreSQL.
- Redesigned and optimized web pages using HTML, CSS, ReactJS, and Bootstrap to improve user experience and navigation.
- Experience in handling server-side data through APIs, AJAX, and implementing downloadable document features.
- Developed reusable components and styled web elements using HTML, CSS, JavaScript, and Bootstrap, resolving UI issues related to browser resizing and image scaling.
- Conducted thorough testing with JUnit and Mockito, achieving 95% code coverage and ensuring application stability.
- Deployed and monitored applications in Kubernetes clusters, ensuring 99.9% uptime and efficient performance in production environments.
- Performed pre- and post-deployment testing in various environments and reported bugs to ensure smooth releases.
- Automated issue creation with JIRA by generating issue collectors and scripting bash validations for JSON/XML data formats.
- Resolved critical production issues with a 98% resolution rate within SLA timelines, ensuring minimal downtime.
- Implemented form submissions and download functionality in web applications, improving user interaction and usability.
- Used Redux architecture for state management in React applications to handle complex state efficiently.
- Generated unit test cases with JUnit and integrated Mockito for mocking dependencies, ensuring robust testing.
- Applied system integration strategies by designing and implementing RESTful web services across multiple applications.
- Utilized Maven as a build tool, managing dependencies and ensuring smooth build processes.
- Tasked with creating POJO classes and conducting server-side and client-side validations for data integrity.
- Performed data cleanup on databases for testing purposes, ensuring accuracy and removing redundant information.
- Fixed UI issues related to component styling, layout alignment, and responsiveness using HTML, CSS, and JavaScript.

Java Developer, Von Maur (Remote)

Sept 2017 - Aug 2019

- Led the design and implementation of RESTful microservices using Spring Boot, ensuring modular and maintainable code aligned with business requirements and architecture standards.
- Architected and optimized complex SQL queries, leading to a 35% reduction in database response times and enhancing the overall performance of transactional systems.
- Spearheaded the integration of Apache Kafka for event-driven architecture, streamlining communication between microservices and enabling real-time data processing.

- Utilized Hibernate and JPA to manage relational data, implementing complex relationships between entities and ensuring data integrity across systems.
- Implemented advanced caching strategies using Redis to reduce database load and increase response times by up to 40%.
- Led the adoption of Domain-Driven Design (DDD) principles, refactoring legacy backend systems to better handle scalability and maintainability as part of a company-wide modernization effort.
- Enhanced security of backend services by implementing OAuth 2.0 and JWT for secure authentication and authorization across microservices.
- Developed, maintained, and optimized APIs for critical business services, following rigorous API governance standards to ensure consistency and stability across the system.
- Collaborated with DevOps to automate deployment pipelines using Jenkins, Docker, and Kubernetes, ensuring rapid delivery and high availability in production environments.
- Conducted thorough code reviews and performance testing, consistently maintaining high standards of code quality, security, and optimization.

Java Developer, Muslim Commercial Bank

Sep 2015 - Feb 2017

- Led the design, development, and optimization of backend services using Java and Spring Boot, contributing to migrating from monolithic systems to a microservices architecture, improving scalability and fault tolerance.
- Architected and implemented robust, high-performance RESTful APIs to support seamless communication between microservices, ensuring secure and efficient data exchange.
- Integrated Apache Kafka for asynchronous message processing, enabling real-time event-driven communication and enhancing system responsiveness and reliability.
- Utilized advanced SQL queries and optimized database schemas to ensure efficient data retrieval and storage, resulting in a 30% reduction in database query times.
- Developed and maintained complex backend services with Spring Data JPA and Hibernate, ensuring seamless database interactions and improving system performance.
- Implemented caching mechanisms with Redis to reduce database load and improve response times for frequently accessed data.
- Designed and maintained secure and scalable authentication and authorization mechanisms using JWT and OAuth 2.0 for user and service-level security.
- Managed and optimized AWS cloud infrastructure, including EC2, S3, RDS, and Lambda, to support scalable and cost-effective backend services.
- Led efforts to monitor and log backend service performance using AWS CloudWatch and ELK stack, identifying bottlenecks and implementing performance optimizations that reduced downtime by 20%.
- Created and maintained CI/CD pipelines with Jenkins and Docker, automating deployment processes and ensuring smooth, frequent releases with minimal downtime.
- Collaborated with front-end teams to define API contracts and ensure proper data validation, contributing to more efficient and reliable full-stack integrations.
- Led code reviews, ensuring high-quality code, adherence to best practices, and implementation of effective design patterns for maintainability and scalability.
- Developed automated unit and integration tests using JUnit and Mockito, achieving 95% test coverage and ensuring high-quality, bug-free backend services.
