EDUCATION

Bachelor of Science in Computer Science

Fall 2022- Spring 2025

The University of Texas at Dallas

GPA: 3.69/4.00

- Relevant Coursework- Databases, Intro to Machine Learning, Operating System, Computer Design, Data Structures, Programming Language Paradigms, Systems programming in UNIX, Software Engineering, Computer Architecture, Probability and Statistics in CS, Computer Science 1 and 2, Discrete Math

EXPERIENCE

Data Solutions Intern – VerticalServe Inc., Millburn, NJ

Summer 2024

Key Qualifications & Responsibilities

- Gained hands-on experience in Python programming for data analysis and artificial intelligence.
- Led webinars on GenAI agents and RAG systems, providing insights into cutting-edge AI technologies and methodologies.
- Contributed to existing solutions by developing and optimizing both front-end and back-end components.
- Enhanced application functionalities, improve user interfaces, and integrate APIs to boost application performance.
- Worked with business intelligence tools to analyze complex datasets and generate actionable insights.

Key Achievements

- Created Chatbot agents using online tools such as OpenAI, Langchain, Langraphs, Flask, FastAPI and Llama.
- Created a RAG program using online tools such as OpenAI, Langchain, ChromaDB, Milvus and REST API

ACHIEVEMENTS

- Achieved 2nd place as a freshman at HackAI - A 24-hour hackathon where teams had to compete to create an AI-driven solution to a challenge. I designed DriveGuardian, an app that tracks distractions while driving and assigns a score to the user to improve.

PERSONAL PROJECTS

- **DriveGuardian:** I plan to extend the project from the HackAI, which will help detect a person's distractions and alert them accordingly. This could help decrease potential driving accidents and help individuals be more efficient in day-to-day activities.
- **OpenWeatherMapAPI:** Built a web-based weather insights tool using Python, LangGraph, LangChain, OpenAI, and the OpenWeather API. Integrated RESTful APIs to fetch a real-time weather data, generating comprehensive weather reports and trends.
- **RAG system:** Developed a Retrieval-Augmented Generation (RAG) system using my experience from my internship implementing OpenAI, LangChain, ChromaDB, and REST API. The application processes and stores user-uploaded files in a ChromaDB database which is processed through Langchain, enabling users to ask context-specific questions based solely on the content of the stored files.
- **Minesweeper:** Developed a Minesweeper game in Java using Greenfoot, expanding the classic gameplay with power-ups and an improved UI. Introduced features like harder levels, hint tiles and extra life to add strategic depth and enhance user experience.
- **Car Listing project:** Developed a full-stack used car listing application with a SQL database and a user-friendly UI for efficient car search and filtering.

ADDITIONAL LEARNING ACTIVITIES:

- AI scholars program of Stanford University - AI learning and implementation (4 weeks)
- Rice Elite - Data Analytics related to COVID-19 Research (1 week)
- ID Tech Camp - Making graphics in Java by responding to visual assignments (1 week)

VOLUNTEERING ACTIVITIES

Houston Food Bank - Houston, TX - Volunteer

12/2020-8/2022

- Worked with volunteers from diverse backgrounds and understood the importance of giving back to the community

Swapaksh Learning Foundation - Bengaluru, Karnataka - Volunteer

05/2019-8/2022

- Managed to maintain an online portal that continues to help underprivileged kids with school supplies and food

Nightingale Medical Trust - Bengaluru, Karnataka - Volunteer

04/2018-04/2018

- Community outreach for elders – food distribution and helping them to make newspaper bags.

TECHNICAL SKILLS

C++, Java, Python, SQL, Data Analysis, APIs, Mathematics, Assembly Language(MIPS), Microsoft Office 365

ESSENTIAL SKILLS

Time management, Critical Thinking, Adaptability, Multi-Cultural fluency, Professionalism, Attention to detail
