

PROFESSIONAL SUMMARY:

- **9+ years of experience** in Snowflake data engineering, starting as a Business Analyst using Microsoft SQL Server and QlikView for data analysis and business intelligence.
- Began professional journey mastering Microsoft SQL Server and QlikView, focusing on data analysis and business intelligence enhancements.
- **Hands-on experience** in building **production-grade data ingestion and processing pipelines** using **Java, Spark, and Scala**.
- Expertise in **designing and implementing data warehousing solutions** on large-scale technologies, including **Snowflake** and **AWS Redshift**.
- Strong experience in **migrating databases** (SQL, Redshift) to **Snowflake** and integrating data from multiple sources, including **AWS S3** and **nested JSON formats**.
- Proficient in **Snowflake Multi-Cluster Warehouses, Snowpipe, Snowflake Clone, and Time Travel** for efficient data management.
- Skilled in **defining roles, privileges, and virtual warehouse sizing** for various Snowflake workloads.
- Experience in **ETL processes** with tools like **Informatica, Azure Data Factory (ADF), and SQL Loader** for data extraction, transformation, and loading.
- Developed **logical and physical data models** for Snowflake and optimized database structures to improve performance.
- Expertise in **HiveQL** for analyzing data and **performance tuning of Big Data workloads**.
- Experience in **real-time streaming frameworks** like **Apache Storm** and Hadoop distributions such as **Cloudera** and **Hortonworks**.
- Proficient in **Azure services**, including **Azure Data Lake, Databricks, Azure SQL Database, and Azure Data Warehouse**.
- Skilled in **operationalizing data ingestion, transformation, and visualization** for enterprise applications using **Azure PaaS services**.
- Developed **batch cycle procedures, stored procedures, and BTEQ queries** with performance optimization in mind.
- Experience in **Splunk reporting systems** and improving database applications on Snowflake.
- **Mentored junior engineers** and ensured adherence to coding standards and best practices.
- Collaborated with **domain experts, engineers, and data scientists** to enhance existing systems and architecture.
- Strong understanding of **data modeling, data governance, and best practices** for data architecture in both **Waterfall** and **Agile** methodologies.
- Proven ability to work with **cloud architects** for setting up cloud environments and ensuring data security.
- Extensive knowledge of **data warehousing principles, ODS, and ETL methodologies** for modern data solutions.
- **Operationalized ETL pipelines** from on-premise databases to the cloud, including **Azure Data Lake Store** and **Azure Data Factory**.
- Experience on Migrating SQL database to **Azure data Lake, Azure data lake Analytics, Azure SQL Database, Data Bricks and Azure SQL Data warehouse** and controlling and granting database access and Migrating On premise databases to **Azure Data lake store** using Azure Data factory.
- Analyze, design, and build Modern data solutions **using Azure PaaS** service to support visualization of data. Understand current Production state of application and determine the impact of new implementation on existing business processes.
- Strong skills in writing optimized **SQL and SnowSQL queries** for data processing and transformation.
- Proficient in **data ingestion patterns** and integration with **HDFS** and various cloud services.
- Experience in **performance monitoring** and optimization using tools like **SQL Profiler** and **Database Tuning Advisor**.
- Focus on **Kubeflow** for managing machine learning workflows, **DBT** for data transformations within data warehouses, and **Snowflake** for cloud-based data warehousing, ensuring high performance and scalability in data operations.
- Demonstrated expertise in architecting **Hadoop** clusters and implementing big data processing solutions across financial and healthcare domains.

TECHNICAL SKILLS:

Skill Category	Technologies/Tools
Snowflake Design & Architecture	Snowflake Multi-Cluster Warehouses, Snowpipe, Snowflake Clone, Time Travel
Data Modeling	Logical and Physical Data Models, Schema Design
Data Ingestion	Data Loading from AWS S3, JSON Data Loading, Snowflake Data Sharing
Performance Optimization	Query Optimization, Virtual Warehouse Sizing
Security & Access Control	Roles and Privileges, Snowflake Data Security
Data Transformation	Snowflake Transformation Logic, Snowpipe, SnowSQL
ETL & Integration	Data Integration with Snowflake from multiple sources (AWS, Azure, etc.)
Cloud Data Warehousing	Snowflake Cloud Data Warehouse, Cloud Architecting with Snowflake
Reporting	Looker Reports based on Snowflake Connections
Tools & Utilities	Snowflake Utilities, SnowSQL
Development	Snowflake Stored Procedures, Triggers, and Views

PROFESSIONAL EXPERIENCE:

Client: Repay, Louisville, KY

Aug 2023 to Present

Role: Senior Snowflake Data Engineer

Roles & Responsibilities:

- **Developed and optimized data pipelines** using **SnowSQL** and **Snowpipe** for continuous data ingestion and bulk loading processes.
- **Converted Talend Joblets** to align with Snowflake functionality, ensuring seamless integration and data processing.
- **Implemented Snowpipe** for automated, real-time data ingestion and processing.
- **Utilized COPY commands** for efficient bulk loading of large datasets into Snowflake.
- **Designed and executed data sharing solutions** between multiple Snowflake accounts to facilitate cross-team collaboration.
- **Created and managed internal and external stages** in Snowflake to streamline data loading and transformation workflows.
- **Transformed data during load processes** using SQL and Snowflake capabilities to ensure data readiness for analytics.
- **Redesigned Snowflake views** to optimize query performance, reducing execution times and enhancing data retrieval efficiency.
- **Conducted unit testing** to validate data integrity and consistency between Redshift and Snowflake environments.
- **Developed data warehouse models** in Snowflake for over 100 datasets using **WhereScape** to support business intelligence needs.
- **Created Looker reports** based on Snowflake connections, ensuring accurate data representation and actionable insights.
- **Validated Looker reports** by comparing outputs with Redshift data to ensure accuracy and consistency.
- **Designed and built Azure Data Factory (ADF) pipelines** using linked services, datasets, and activities for ETL processes.
- **Developed JSON scripts** to deploy and manage ADF pipelines for data extraction, transformation, and loading (ETL).
- **Integrated Azure Data Factory** with Azure SQL, Blob Storage, and Azure Data Warehouse to load and process data for Snowflake.
- **Loaded data from Data Warehouse to Azure Data Lake** using ADF integration runtimes for efficient data storage and retrieval.
- **Transferred data from Azure Data Lake to Blob Storage** for subsequent ingestion into Snowflake.
- **Wrote ETL jobs in Talend** to extract data from web APIs using REST and HTTP calls, loading data into HDFS and Snowflake.

- **Utilized Talend Big Data components** for processing data with Hadoop, S3 Buckets, and AWS Redshift.
- **Validated data integrity** between SQL Server and Snowflake to ensure consistency and accuracy across platforms.
- **Implemented Change Data Capture (CDC)** in Talend to efficiently capture and load incremental changes to the data warehouse.
- **Developed and optimized stored procedures and views** in Snowflake to support data transformation and reporting.
- **Created mappings in Talend** to populate dimension and fact tables, supporting analytical data models.
- **Consulted on Snowflake Data Platform Architecture** and deployment strategies to foster a data-driven culture in enterprises.
- **Demonstrated proficiency with RDBMS systems** and wrote complex SQL and PL/SQL queries for data processing and analysis.

Environment: Snowflake, SnowSQL, Snowpipe, Talend, Looker, WhereScape, Azure Data Factory (ADF), Azure Data Lake, Azure Blob Storage, Azure SQL Database, Redshift, SQL Server, AWS S3, Hadoop, HDFS, REST APIs, Java, Python, Apache Spark, Kubernetes, Apache Airflow, Informatica, SSIS, JSON, SQL, PL/SQL, ETL Tools, Cloud Data Platforms (AWS, Azure, GCP), Data Governance Frameworks, Data Warehousing, Change Data Capture (CDC).

Client: Mindoula, Silver Spring, MD

Dec 2021 to Jul 2023

Role: Senior Snowflake

Data Engineer

Roles & Responsibilities:

- **Evaluated Snowflake design considerations** for changes in application architecture to ensure optimal performance and scalability.
- **Built logical and physical data models** in Snowflake to support evolving business requirements and data changes.
- **Defined roles and privileges** in Snowflake to manage access control for different database objects and ensure data security.
- **Determined virtual warehouse sizing** in Snowflake to optimize performance across various workloads.
- **Designed and implemented database structures** and components to support data transformation and storage needs.
- **Collaborated with cloud architects** to set up Snowflake environments and ensure seamless integrations with other cloud services.
- **Worked extensively with Oracle Databases, Redshift, and Snowflake** to manage data storage, migration, and querying.
- **Addressed system challenges** involving integration of distributed systems across South America and managing third-party vendor data access.
- **Created authorization processes** for departmental users with different roles and access privileges.
- **Developed SSIS workflows** to automate data loading into HDFS and processing using Hive.
- **Created alerts and scheduled reports** for automated monitoring and notification purposes.
- **Developed and managed Splunk applications** for log management and operational intelligence.
- **Performed data transformations** in SSIS using Lookup, Aggregate, Sort, Multicast, Conditional Split, and Derived Column tasks.
- **Managed data cleansing and transformation** activities during data migration using control flow and data flow tasks in SSIS.
- **Developed ETL mappings, sessions, and workflows** in Informatica to extract, validate, and transform data based on business rules.
- **Worked with various Hadoop distributions** like Cloudera, HortonWorks, and MapR for big data processing.
- **Utilized HDFS file formats** such as Avro, Sequence Files, and compression formats like Snappy and Gzip.
- **Designed Hive external tables** with partitioning, dynamic partitioning, and bucketing for optimized querying.
- **Ingested data from Oracle to Hive** and ensured efficient data processing and querying.
- **Optimized performance** through index tuning, SQL Profiler, Database Tuning Advisor, and other performance monitoring tools.
- **Developed Spark-SQL scripts** to create Schema RDDs, loaded data into Hive tables, and processed structured data.
- **Configured AWS Data Pipeline** to load data from S3 into Redshift and defined JSON schemas for mapping.

- **Converted Hive/SQL queries** into Spark transformations using Spark RDDs for optimized data processing.
- **Used data formats** like Avro, Parquet, and ORC for efficient storage and querying in HDFS.
- **Implemented data security strategies** to ensure data availability, integrity, and stability across systems.

Environment: Snowflake, SnowSQL, Talend, SSIS, Informatica, Redshift, Oracle, Hive, HDFS, Spark, Spark-SQL, AWS Data Pipeline, S3, JSON, Splunk, Cloudera, HortonWorks, MapR, SQL Server, MySQL, Avro, Parquet, ORC, Hue, Performance Monitor, SQL Profiler, Database Tuning Advisor.

Client: Nuance Communications, Mahwah, NJ

Aug 2019 to Nov 2021

Role: Snowflake Data Engineer

Roles & Responsibilities:

- **Developed logical and physical data models** using Erwin 4.5 to capture current and future state data elements and data flows.
- **Designed and built data marts** to meet business requirements and enhance analytical capabilities.
- **Created and optimized Views, Stored Procedures, and Triggers** in Snowflake for efficient data staging and transformation.
- **Performed in-depth analysis of source systems**, requirements, and OLTP systems to identify necessary dimensions and facts.
- **Developed Data Acquisition and Interface System Design Documents** to standardize data integration processes.
- **Designed dimensional models** for data warehouses, ensuring confirmation of source data layouts and business needs.
- **Deployed reports** using SQL Server 2005 Reporting Services (SSRS) to deliver insights across the organization.
- **Installed and configured SQL Server 2005** on virtual machines and migrated physical machines to virtual environments.
- **Conducted system testing** and validated functionality post-virtualization to ensure seamless operations.
- **Utilized SQLCODE and SQLERRM** for error handling and debugging during SQL development.
- **Leveraged Oracle import/export utilities** to facilitate data migration and integration processes.
- **Created Oracle external tables** to load data from flat files and developed PL/SQL scripts for monitoring processes.
- **Wrote optimized SQL queries** involving complex join conditions to retrieve and manipulate data efficiently.
- **Applied Oracle ETL processes** for address data cleansing and validation tasks.
- **Developed and tuned data integration processes** using Oracle and Informatica PowerCenter to handle high-volume datasets.
- **Built reusable ETL components** for the ETL team, ensuring adherence to coding standards and best practices.
- **Reviewed high-level design specifications**, ETL code, and mapping standards to ensure quality and consistency.
- **Designed new database tables** to address business information needs and improve data accessibility.
- **Created detailed mapping documents** to guide ETL development and ensure accurate data transformations.
- **Extracted files for external vendors** using ETL processes and coordinated data delivery efforts.
- **Migrated ETL mappings** through development, testing, and production environments, ensuring seamless deployment.
- **Performed unit testing** and performance tuning of ETL jobs to enhance efficiency and reliability.
- **Authored documentation**, including **Source-to-Target Mapping Documents** and **Unit Test Cases**, for project traceability.
- **Read data from flat files** and loaded it into databases using SQL Loader for streamlined data ingestion.
- **Collaborated with cross-functional teams** to maintain and support ETL processes, ensuring data integrity and availability.

Environment: Snowflake, Erwin 4.5, SQL Server 2005, SSRS, Oracle 6i, PL/SQL, SQL Loader, Informatica PowerCenter, SQLCODE, SQLERRM, Virtual Machines, ETL Tools, Data Marts, Dimensional Modeling, Data Warehousing, Data Cleansing, Data Mapping, Performance Tuning, Flat Files.

Client: Prudential Finance, Newark, New Jersey

Nov 2017 to Jul 2019

Role: Python Developer

Roles & Responsibilities:

- Developed **Python** scripts to automate data transformation and **ETL** processes, enhancing efficiency and reducing errors.
- Managed **Informatica** PowerCenter workflows, optimizing data integration and ensuring high data quality.
- Configured **Apache Airflow** to automate and schedule complex data jobs, enhancing workflow reliability.
- Employed Git for version control to facilitate collaborative development and maintain code quality.
- Utilized **Docker** to create reproducible development environments, ensuring consistency across platforms.
- Implemented **Jenkins** for continuous integration, streamlining the deployment process, reducing downtime.
- Enhanced real-time data processing using Apache Kafka, facilitating efficient data streaming and analysis.
- Developed robust **SQL** queries for data analysis and reporting, supporting business intelligence initiatives.
- Optimized ETL workflows for performance, ensuring timely data availability and system responsiveness.
- Integrated **Microsoft SQL Server** for robust data storage and management, ensuring data integrity.
- Automated data validation and testing processes using **Python**, improving data accuracy and reliability.
- Collaborated with cross-functional teams to align data solutions with business objectives.
- Managed source code repositories using **Git**, ensuring version control and effective team collaboration.
- Developed user interfaces for data interaction using Python, enhancing user engagement and accessibility.
- Configured Docker containers for deployment, ensuring consistent and secure application performance.
- Monitored and optimized system performance, identifying bottlenecks in data workflows.
- Conducted comprehensive data audits to ensure compliance with regulatory standards.
- Led training sessions for junior developers on **ETL** processes and data management best practices.

Environment: Python, Informatica PowerCenter, Apache Airflow, Git, Docker, Jenkins, Apache Kafka, SQL, SQL Server.

Client: OLR India Pvt Ltd, India

Mar 2014 to Sep 2017

Role: Business Analyst

Roles & Responsibilities:

- Developed **SQL queries** for business intelligence and analytics, enhancing data-driven decision-making.
- Utilized **Microsoft SQL Server** for effective data management and performance optimization.
- Created interactive data visualizations using QlikView, improving user engagement and insight discovery.
- Integrated **R** for statistical analysis and predictive modeling, providing deeper insights into data trends.
- Configured **Power BI** for dynamic business reporting, enabling real-time data visualization and analysis.
- Managed Apache Kafka for efficient data streaming and event processing, supporting real-time analytics.
- **Employed Subversion (SVN)** for version control, maintaining code integrity across project iterations.
- Streamlined data storage solutions, optimizing database performance and access.
- Collaborated with business units to identify key data requirements and insights.
- Developed and maintained business intelligence solutions using **Power BI and QlikView**.
- Optimized data workflows to increase efficiency and accuracy of data processing.
- Enhanced decision-making through advanced analytics and data visualization techniques.
- Coordinated the implementation of data analytics projects, aligning with strategic business goals.
- Implemented data security protocols, ensuring the protection of sensitive information.
- Trained business users on data tools and dashboards, enhancing organizational data literacy.

Environment: SQL, Microsoft SQL Server, QlikView, R, Power BI, Apache Kafka, Subversion (SVN).

Education:

- Bachelor of Technology (B.Tech) in Information Technology from Osmania University, Hyderabad, Telangana, India - 2014
