Summary

18+ Years of Experience in eCommerce, Industry Automation, Banking, and Start-ups

Skilled in C#, ASP.NET Core, AWS, Azure, SQL/NoSQL databases, and CI/CD pipelines. Proven track record in optimizing core systems for enhanced performance, reliability, and efficiency. Experienced across the full SDLC, from requirements gathering to deployment. Proficient in front-end technologies like Angular and Bootstrap. Passionate about mentoring teams and solving complex challenges.

Technical Skills

Skilled in: C#, ASP.NET Core, Azure, SQL/NoSQL databases, Kubernetes, CI/CD pipelines, and DevOps.

Proficient in: Web API (REST API), WCF, WPF, Windows services, multithreading.

Appreciation for best practices: DDD, Design Patterns

Front-end technologies: JavaScript, jQuery, AngularJS & Angular, React, CSS, Angular Material, Bootstrap, HTML.

Databases: Microsoft SQL Server, MongoDB, Cosmos.

CI/CD tools: GIT, Azure DevOps, TFS, SVN, Jenkins, TeamCity, Octopus, Bitbucket/Stash.

Cloud platforms: Microsoft Azure (Functions, EventHub, Service Bus, AKS, storage, KeyVault, AppInsight, Container Registry, Cosmos), AWS (EC2, API Gateway, Lambda, Step Function, SES, CloudWatch, S3, CloudFormation).

Testing and profiling tools: NUnit, NCover, MSTest, Moq

Familiar with: IdentityServer4, OAuth, AzureAD, Tibco, NServiceBus.

Tools Experience with: Postman, JIRA, Confluence, Docker, App-Insight, DynaTrace

Experienced in mentoring and leading teams, driving performance optimization and solving complex automation challenges.

Experience

Technical Lead *2021 May – 2022 Oct, 2023 Apr – Till Date*

WooliesX/Woolworths

Fulfilment – At WooliesX (Australia leading eCommerce solution), I contributed to the digital transformation of legacy e-commerce applications, migrating from a monolithic architecture to a microservices framework. I focused on the core **Order Fulfilment Picking Service**, which ensures that online orders placed through the Woolworths portal are prepared for dispatch. This service fulfils all ordered products while applying workflows, validations, and business rules (such as substitutions, free samples, and collectables). The domain logic was segmented into multiple microservices, each handling specific aspects of the order picking process.

Focused on uplifting legacy applications to a modern event-driven microservice platform. Analysed application dependencies, identified gaps, and developed mitigation plans for phase-by-phase migration, support, and implementation. Gathered and analysed data from the existing system landscape, presenting findings to key stakeholders for informed decision-making.

Responsibilities:

- Leading and mentoring team of software engineers and fostering their skill development.
- Delivered **end-to-end system services**, encompassing design and development.
- Spearheaded the transformation of legacy applications into microservices, resulting in a **40% improvement in system performance** and facilitating smoother feature rollouts.
- Collaborated with other squads, product owners, and business analysts to synchronize tasks and enhance team coordination.

Technology & Tools

- Asp.net Core, REST API, C#, Git, SQL Server, MongoDB, XUnit
- Azure DevOps, Azure App-Insights, Azure Service Bus, EventHub, KeyVault, Azure DevOps

Technical Lead *2022 Oct – Apr 2023*

Rapid Response Revival Research

Medical Device Dashboard – RRR is a medical device company utilizing Azure IoT services to manage its devices. They are developing microservices to process IoT data, facilitate user interactions, and integrate with third-party systems for monitoring and configuration. Data will be pushed to Azure Cloud, with a user-friendly dashboard for real-time monitoring. The applications will also integrate with Salesforce and Azure services like IoT Hub, Digital Twin, and Cosmos DB to enhance customer engagement.

Responsibilities:

- End-2-End delivery of system services, system design & development.
- Azure DevOps CICD pipeline creation, maintain and security.
- Mentoring junior developer, assigning task, mentoring and developing their skills.
- Responsibility of development and delivery of module.

Technology & Tools

- Asp.net Core, Asp.net REST API, C#, Git, SQL Server, XUnit, React
- Azure DevOps, Digital Twin, Azure AD

Senior .NET Consultant 2019Nov – 2021May

NSW Rural Fire and Services

RFS Internal Applications – At RFS, a suite of applications collaborates to manage fire incidents, brigade data, and volunteers while integrating with both internal and external agencies. The primary application, **Incident Control (ICON)**, is an online system offering comprehensive solutions for fire incident management, including reporting, fire status tracking, GIS data, documentation services, and user management. Supporting applications and APIs aggregate and distribute data to sub-systems, also providing external feeds to mobile platforms and various agencies.

Responsibilities:

- System re-architecture to provide new digitalization experience.
- Understanding legacy application and migrating to latest tech stack, end to end responsibility of on-premises application stack and re-architecture application to cloud migration.
- CICD pipeline creation and stabilization.
- Expose and integrate 3rd party API integration solution.
- Integrating application using AWS Lambda, Step Function, S3, API Gateway
- CICD pipeline setup and cloud formation deployment.

Technology & Tools

- Asp.net Core, Asp.net MVC/API, C#, Git, SQL Server, jQuery, Angular
- AWS, Team city, PowerShell and NodeJS.

Solution Consultant 2018Nov 2019Nov

Sydney Trains

Sydney Trains – Library & Application Development – I led the delivery of a digital train timetable system, replacing outdated manual processes. This automated system retrieves daily timetables from an external ESB server and processes them in standard formats. Processed timetables are then accessible across various internal systems through subscription models.

Responsibilities:

- Understanding the existing manual process of timetable generation.
- Working closely with team lead and manager to gather different behaviours of the system.
- Architecture, Design, Development, and documentation of the system.

Accomplishments:

- Understanding existing issues and provided generic ESB client solutions.
- Provided single responsibility reusable components for other projects.

Technology & Tools

- C#, WPF, WCF, MS Access, TFS

Senior .NET Developer 2018Jun – 2018Nov

NSW Electoral Commission

The application serves the NSW ballot counting logistics team by automating ballot baggage distribution. It reads barcodes from cartons and ballot bags to identify their locations, guiding the logistics team through the next steps. The application dashboard enables comprehensive monitoring and control of the ballot counting process for the NSW election.

Responsibilities:

- Understanding excel format to get existing system operation.
- Working with different business entities to understand the barcode and application flow.
- Architecture, Design, Development, and documentation of the system.
- Scalability of application and smooth transformation of application to other process.

Accomplishments:

- Scalability of application with the simple configuration.

Technology & Tools

- C#, ASP.NET Core, Web API, Razor Pages, SQL Server, Azure DevOps

.NET Integration Consultant 2017 Aug – Jun 2018

Johnson Controls/Tyco

Application Integration – Integrated various application APIs into the system using a hybrid approach that combines monolithic and microservices architectures. This project was delivered to Canberra Traffic and Transportation (Capital

Metro) and RMS customers. The main strategy focused on isolating systems from one another while enabling flexible integration of future software modules.

Responsibilities:

- Investigate existing functionalities and provide a new integrated solution.
- Working closely with the testing team to understand issues and providing solutions.
- Architecture, Design, Development, and documentation of the system.

Accomplishments:

- Understanding the system and streamlining system functionalities.
- Integration and provided generic solution, implementation of an adaptive solution for best troubleshooting.
- Integration of IdentityServer4.

Technology & Tools

- .NET Core 2.0, SQL Server 2008, MongoDB, jQuery & Angular.

.NET Consultant 2017 Mar – 2017 Aug

MasterCard

Redemption Management – The MasterCard redemption management software offers a comprehensive solution for product configuration, prize management, promotional offers for banks, and a redemption portal for cardholders.

Responsibilities:

- Analysing the existing system and enhance the system as per business requirements.
- Discussion with BA and estimation of stories, separation of stories into technical tasks.
- Working as a developer and performing Analysis, Technical Design, Development, Documentation

Accomplishments:

- Development of a new user interface using jQuery & Bootstrap.
- Analysis and development of Web API as per MasterCard standards
- Quick understanding of database design and enhancement

Technology & Tools

- C#, ASP.NET MVC, NUnit, jQuery, Web Api(REST), TeamCity, TFS, Confluence, JIRA, NCrunch, NInject

.NET Consultant 2016 Aug – 2017 Mar

Commonwealth Bank/HCL

CommSee – This project focuses on enhancing banker desktop and intranet applications to improve access to packages and schemes available for retail clients.

Responsibilities:

- Interaction with business analysts for gathering the business requirements
- Analysis of requirement and planning the course of action
- Working as a developer and performing Analysis, Technical Design, Development, Documentation

Accomplishments:

- Designing rich Frontend web pages using CSS, Angular Materials and AngularJS.
- Analysis, Design and Development of the assigned feature/task
- Implemented Web APIs part of microservice and Documentation

Technology & Tools

C#, ASP.NET MVC, WinForms, MsTest, Oracle, Angular, WebApi(REST), Microservices, CSS, Angular Material, Jasmine, Gulp, Karma, HTML5, JavaScript, Git, Bitbucket, TeamCity, TFS, Confluence, JIRA.

Associate Architect - 2010 Aug – 2016 July

Schneider Electric

OneClickTrack – An IoT project that tracks the entire dairy supply chain, monitoring quality parameters and ensuring effective delivery. Developed using C# MVC 4 and REST API for mobile and hardware interactions, it features a responsive front-end built with Schneider templates, CSS, and Bootstrap. The application and database are hosted on Azure.

SoMachine – PLC configuration and monitoring software created with C# using WPF and WinForms. It integrates with the CoDeSys platform and other tools (like Advantys and Visio Designer) for machine configuration and diagnostics. I was responsible for its design, development, testing, deployment, and maintenance, ensuring high performance in monitoring hardware parameters.

Citect-SCADA (Pelco Integration) – This integration enhances SCADA systems with Pelco video monitoring, providing real-time operational insights for plants in the automation industry.

Technology & Tools

- C#, ASP.NET MVC, MSTest, Unity, Angular, WebApi(RestApi), jQuery, CSS, HTML5, JavaScript, Bootstrap, TFS, Azure, JIRA, MS SQL 2012/14, Moq. Enterprise Architect

Responsibilities:

- Analyzed business requirements and translated them into technical tasks.
- Created software architecture documentation using Enterprise Architect.

- Hosted applications on Azure Cloud, facilitating interaction with hardware and mobile devices.
- Led critical performance improvements for the system.
- Collaborated closely with German stakeholders to understand business needs.
- Mentored the team, managing technical assignments and providing assistance.
- Estimated tasks, assigned responsibilities, and documented discussions with BA, Marketing, and Development teams.
- Managed end-to-end technical solutions, overseeing project processes (JIRA tasks, unit testing, and reviews).
- Served as a developer, handling analysis, technical design, development, and documentation.

Accomplishments:

- Quickly learned ASP.NET MVC, jQuery, and AngularJS for the OneClickTrack project.
- Gained a strong understanding of Azure, integrating it with SendGrid and Twilio.
- Developed a solution for generic search functionality across different SoMachine navigators.
- Improved performance using Ants Profiler analysis.
- Created a proof of concept for a Graphical Navigator Editor using the yWorks framework.

Tech Lead/ Senior Developer -2007 Mar - 2010 Aug

Honeywell

MaxPro Video Surveillance Management System – MaxPro VMS represents the latest innovation in video management and surveillance technology, enabling the integration of legacy analog video with IP-network cameras and recorders, along with advanced video analytics. It seamlessly integrates with access control and alarm management software, offering a versatile video configuration and rendering system compatible with over ten different camera and DVR manufacturers.

- Developed a complete SDK for hardware configuration.
- Implemented live data synchronization between systems using WCF TCP/IP endpoints.
- Designed the UI layer using WinForms, ensuring generic integration with third-party software.

Technology & Tools

C#, WinForms, WPF, WCF, .NET Remoting, CAB, MSTest, MSSql 2005/2008 TFS, Moq.

Responsibilities:

- Development of Middle tire layer using C#
- MS SQL database design and development
- Proving Modular WinForms UI using CAB framework
- Implementation of Server layer using WCF framework – data synchronization of different client

Accomplishments:

- Provided effective data asynchronous solution to different client and server using WCF service.
- Complete SDK implementation using the Factory pattern

C# Software Engineer-2005 Sep - 2007 Mar

CodeTheatre InfoTech

CT Healthcare – A hospital management system for small to mid-sized hospitals, managing inpatient and outpatient services, wards, and operating theatres.

MsaleS Sales Management System – Part of a CRM solution, this system tracks sales activities of employees. Users access the system based on their roles, with data stored in MS Access and synchronized with SQL Server 2000 when connected to the Internet or intranet.

Technology & Tools

C#, WinForms, MSSql 2005, NUnit, TFS.

Responsibilities:

- Software development using C# technicality.
- Database query, stored procedure & Database base layer development.
- Design UI using WinForms and ASP.NET

Accomplishments:

- Provided quick solution and implication of HealthCare system.

Education

- Bachelor of Engineering in Computer & Diploma in Computer Science

Awards & Certificates

- Six Sigma Green Belt
- **Patent – “A DEVICE FOR INTERACTING WITH MACHINES REMOTELY USING MULTIPLE RESPONSE SYSTEMS OVER TELECOMMUNICATION AND METHOD THEREOF” - reference number (4344-2014/ANB/SU)**
- Pat on the Back for PELCO – SCADA integration
- Individual Excellence Award for developing best Business logic entity

Sriganesha

- Spot award for tech-talk on Threading & its concepts in C#
- Excellence in Innovation Award-2009 for MAXPRO VMS.
