SUMMARY — Results-driven software engineer with 2+ years of experience in application development and designing cloud storage systems for service products from technical specifications using Agile methodology. Adept at product development, software design, API integration, debugging, and testing while implementing robust technical solutions for complex use cases, emphasizing reliability and driving continuous improvement. Proven expertise in collaborating with large teams, product improvement, participating in development activity, developing AI-driven projects related to emerging technology, conducting design reviews, and writing comprehensive technical documentation for project implementations. Customer focused with strong communication skills, dedicated to addressing performance issues through enhanced technical support.

EXPERIENCE

University of Colorado Denver

June 2023 – December 2024

Teaching Assistant

Machine Learning

- Conducted technical discussions and code reviews to explain complex concepts, algorithms, and programming language tasks related to statistical modeling including configuration and optimization of machine learning environments.
- Provided guidance to students on their python scripts, data models, troubleshooting and overall understanding.
- Assisted in designing the course curriculum and build technical research projects with efficient coding standards, emphasizing service integration and bug fixing.

Infosys

Aug 2021 – Dec 2022

Data Engineer

Client: AlticeUSA

- Developed and maintained scalable data pipelines and data driven production workflows to handle big datasets, utilizing libraries like Pandas and NumPy for querying, data transformation and caching of large volumes of synthetic data while ensuring high uptime.
- Developed a continuous deployment and continuous integration solution to analyze and streamline deployment that saved at least 40% downtime and high availability for all other teams.
- Developed and maintained multi threaded applications, coordinating high concurrent user access, distributed transaction processing, low latency and ensuring data integrity.
- Created innovative solutions for streamlining SQL queries using industry trends and design patterns, resulting in a 15% reduction in page load time, significantly improving customer support and quality assurance metrics.
- Engaged in thorough reporting and annotation of systems to identify defects and facilitate corrective actions, aligning with best practices in the software development life cycle.

Cognizant Technological Solutions

Mar 2021 – Aug 2021

Full stack java developer

- Developed a retail banking application using Java, Spring boot, Spring framework, Spring data and microservices architecture focusing on front end and back-end integrations.
- Delivered a prototype for a major client's web application within 6 months and service integration, ensuring all project goals were met on time through effective event-driven architecture and software engineering practices.
- Improved system resilience by embedding automation testing and monitoring tools and handling exceptions to reduce user-reported errors by 20%.
- Ensured compliance with development standards and procedures, including authentication and proper server-side logic.

PROJECTS

Predicting human preferences from LLM responses

Python, NLP

- A novel approach that leverages Generative AI models fine-tuned with Low-Rank Adaptation (LoRA) and incorporates custom weights.
- By analyzing the alignment between LLM outputs and human expectations, it seeks to contribute to the development of more human-centric and user-friendly AI systems.

3D Scene Reconstruction

Python, Computer Vision

- A deep learning-based advanced image processing model that generates the 3D scene from the existing 2D medical images using Pytorch, Resnet model, Epi-polar geometry, point-cloud geometry.
- Used encoder-decoder architecture with skip connections and multi-scale disparity maps. Used ELU functions with upconvolution and normalization to enhance the accuracy.

Wi-fi Data collection

GCP, Spring boot, Gradle, Python

- A data collection system that collects all the events that occurred on the networking device (modem/router) to provide insights about user's usage data and perform predictive analytics for marketing and advertising.

- Developed using Google Cloud Platform, Google Cloud Storage, GCP Pubsub, BigQuery, Java, Springboot, Python, Apache Airflow, relational databases, and MongoDB.

Email Service in DMCA

Java, Spring boot, Protobuf, Apache Kafka

- A product management system that helps in managing the network devices(modems/routers) to switch between different states depending on the users usage guidelines and policies.
- Developed an email service that alerts the user if they have performed any action that violates the terms and conditions, and depending on the number of warnings, the user's device can be blocked.

EDUCATION

University of Colorado Denver

Master of Science in Computer Science

- CGPA: 3.93

SKILLS

Cloud	GCP, AWS	Microservices, Cloud computing, SDK, Multi process architecture, Threading, Agile development, Containerization, Codebase
Languages	Python, Bash, Java, C++, C, JavaScript	
OS	Linux, Ubuntu, Windows, RedHat, Unix	
Frameworks	Spring security, Spring boot, Flask, Hibernate, Scikit-learn, Pytorch, Tensorflow	Tools Git, Visual Studio code, Gradle, JIRA, Microsoft tools, Apache Airflow
Libraries	Scipy, Pandas, Numpy, Matplotlib	
AI Technologies	NLP, Computer Vision, Generative AI, Large Language Models	Others NoSQL(MongoDB), Google Firebase, Data structures, Unit testing, HTML, CSS, GCS, Pub/Sub, BigQuery, Debugging, QA, JSON, XML, JUnit
Databases	Oracle, Postgres, MySQL, MS SQL server	
Concepts	Object Oriented Programming, RESTful APIs,	

CERTIFICATIONS AND ACCOMPLISHMENTS

- Certified professional Python programmer by the OpenEDG Python Institute.
- Certified in Natural Language Processing by Edx and Microsoft.
- Certified in Python for Data Science by Anaconda.
- Certification provided in Career essentials for Software development by Microsoft and LinkedIn.
- Hackerrank certified skills: Java, Python, Problem solving, C++.
