

Srikanth Tadisetty

636-409-0670; srikanthdba1308@gmail.com

Certified DBA, SQL, PostgreSQL, Cloud DBA

Professional Summary:

SQL Database Administrator (SQL DBA)

13+ years of experience in SQL Server, PostgreSQL, and cloud database engineering, delivering solutions in database design, migrations, performance optimization, and security.

Key Accomplishments:

- Expertise in installation, Configuration, Migration and Maintenance of MS SQL Server 2005/08/08 R2/ 2012/14/16/17/19 and 2022.
- Expertise in DB administration for production environments with more than 1400+ SQL Servers in a 24/7 environment.
- Expertise in planning, configuring and maintaining (HADR) High Availability and disaster recovery solutions, Failover Clusters, Always On high availability groups, Replication, Log-Shipping and Mirroring.
- Expertise in Powershell & T-SQL scripting to automate the DBA tasks, building automated tools for proactive monitoring.
- Expertise in automating SQL DB OS and Security patching to remediate vulnerabilities and tracking the patching status by building SSRS dashboards across all environments.
- Defined and executed SOX compliance processes, including audits, reporting, and SQL server hardening (e.g., GMSA).
- Specialist in documenting procedure and process documents for future use to the team.
- Designed and supported backup strategies, including Geo-backups, long-term retention, and cost-effective recovery processes.
- Optimized database and application performance using DMVs, Query Performance Insights, and tuning tools.
- Expertise in monitoring tools like Spotlight, Fog light and backup tools like Lite Speed.
- Diagnosed and resolved resource issues, including CPU, memory, I/O, and disk space, while establishing routine maintenance plans (integrity checks, index rebuilding, and statistics updates).
- Designed, configured, and managed SQL Server Database Engine, SSIS, SSAS, and SSRS across Azure SQL Cloud platforms, including Standard, Premium, Hyperscale, and Elastic Pools.
- Proficient in subscription services, resource groups, Azure Virtual Networks, and storage for Azure SQL Databases.
- Led cross-database migrations, including SQL Server to GCP PostgreSQL and MariaDB to GCP MySQL, using third party tools Ispirer and Striims.
- Expertise in Azure SQL PaaS, SQL Managed Instances, and SQL VMs with efficient capacity planning and migration strategies.
- Configured ETL workflows with SSIS and developed SSRS reports for custom dashboards to monitor performance and availability.
- Worked closely with engineering teams on feature enhancements, bug fixes, and escalations, adhering to SLAs.
- Participated in Change Advisory Board (CAB) meetings and provided 24/7 operational support for mission-critical applications.

PostgreSQL Database Administrator (PostgreSQL DBA)

Specialist in PostgreSQL database administration, high availability solutions, and performance optimization.

Key Accomplishments:

- Installed and configured PostgreSQL databases across various platforms, fine-tuning parameters like memory allocation, connection limits, and logging.
- Designed and enforced database security measures, including user authentication, access controls, and activity auditing.
- Configured streaming and logical replication for data redundancy and high availability.
- Established failover mechanisms and performed testing to ensure data integrity during replication.
- Estimated resource requirements, collaborated with infrastructure teams, and implemented vertical/horizontal scaling strategies to meet growth needs.
- Monitored database performance using tools such as Grafana, pg_stat_activity, and pg_stat_replication.
- Optimized SQL queries and execution plans to improve performance and reduce latency.
- Resolved complex issues, including database crashes, data corruption, and performance bottlenecks.
- Conducted regular maintenance (vacuuming, index rebuilding, and statistics updates) and applied patches/upgrades to maintain database integrity.

Educational Qualifications

- **Master of Computer Applications (MCA)**, Gokul Institute of Technology & Sciences, JNTU Kakinada

Project Experience:

Project 1: Enterprise Business Systems - Corporate

Organization: OpenText Technologies India Pvt. Ltd.

Feb

2019 till date

Role: Senior Database Administrator

Skills: SQL Server, Azure SQL Database, GCP Cloud SQL, Azure/GCP Managed Instance, PostgreSQL, Cloud Migration

Tools: ITSM, Spotlight 13.5, SiteScope, LiteSpeed Backup, Ispirer, Striims

Project Description: This project involved modernizing the enterprise database systems by migrating from on-premises SQL Server and MariaDB environments to Azure and GCP cloud platforms. The focus was on ensuring secure, high-performance, and scalable database solutions while leveraging cloud-native features.

Responsibilities:

- Acted as a **Technical Advisor** for Microsoft Customer Support, mentoring teams and ensuring smooth cloud migrations.
- Performed **cross-database migrations**, including SQL Server to GCP PostgreSQL and MariaDB to GCP MySQL, Ispirer, Striims and SSMA tools.
- Designed PostgreSQL database schemas for high-volume transactional systems and optimized query performance.
- Configured and managed **Azure SQL** service models, including Hyperscale, Elastic Pools, and Business Critical instances.
- Secured databases with **AD token authentication**, firewalls, private endpoints, and virtual network configurations.
- Delivered disaster recovery and high availability solutions, such as **Geo-replication**, Failover Groups, and PITR backups.
- Provided database performance optimization using SQL Server DMVs, Query Store, and native Azure monitoring tools.
- Conducted root cause analysis, resolved complex technical issues, and collaborated with product teams for enhancements and bug fixes.

Project 2: Real Estate Mortgage Business Solutions

Organization: Berkadia Services (Commercial Mortgage Banking)

Mar 2017 to

Feb 2019

Role: Database Engineer

Skills: SQL Server, SSIS, SSRS

Tools: SCOM, IM

Project Description: This project focused on managing and maintaining the database infrastructure for Berkadia's real estate mortgage business, ensuring data integrity, security, and availability across development, testing, and production environments.

Responsibilities:

- Supported application testing by performing database refreshes across environments, ensuring proper connectivity and configurations.
- Developed and implemented **backup strategies** aligned with disaster recovery (DR) standards and banking policies.
- Designed and managed **reports, dashboards, and SOPs**, securely stored on SharePoint for easy access.
- Troubleshoot database issues, including performance degradation, blocking, deadlocks, and connectivity failures.
- Configured and monitored **high-availability solutions**, such as Log Shipping, Clustering, Mirroring, and Always On, Transactional Replication.
- Optimized database performance using SQL Profiler and DMVs, addressing bottlenecks and improving server efficiency.
- Coordinated server builds, patching, and post-configuration activities with cloud and application teams.

Project 3: Global DBA Services

Organization: PB Systems India Pvt. Ltd.

Aug

2014 till Mar 2017

Role: Database Administrator

Skills: SQL Server 2005-2012

Tools: SCOM, BMC

Project Description: This project provided database administration services for global clients, focusing on database performance, high availability, and proactive monitoring solutions to ensure smooth business operations.

Responsibilities:

- Performed installations, patches, and service pack upgrades on production standalone and clustered SQL Servers.
- Resolved **mirroring failover** and log shipping synchronization issues, ensuring database availability.
- Developed **SSRS dashboards** for proactive database monitoring and troubleshooting.
- Created and scheduled maintenance jobs for backups, index reorganizations, and database integrity checks.
- Migrated databases between environments using SSIS packages and addressed data transformation requirements.

Project 4: Maya Advertising Media

Organization: Gaian Solutions India Pvt. Ltd.

Oct

2012 to Aug 2014

Role: Database Administrator

Skills: SQL Server 2005-2012

Project Description: This project supported the backend database systems for an advertising media platform, focusing on maintaining uptime, database optimization, and resolving ad-hoc database issues.

Responsibilities:

- Addressed database-related tickets and ensured SLA compliance for client requests.
- Installed and configured SQL Server instances, service packs, and hotfixes as per project requirements.
- Created and maintained backup/restore strategies, ensuring minimal downtime for production and test environments.
- Performed database maintenance activities, including reorganizing indexes, updating statistics, and monitoring server health.
- Configured, monitored, and troubleshoot **log shipping, mirroring**, and database migrations.
- Provided support for ad-hoc client requests and immediate troubleshooting of critical issues.
