

Srinivasarao Panguluri
Power BI Developer
Email: spanguluri1@gmail.com
Contact: +1 832 919 6361

Professional Summary

- Experienced **Power BI Developer** with **7+ years** in **data visualization, ETL pipeline development, and financial analytics**. Expertise in **Power BI, DAX, SQL, Snowflake, and Python** to build **scalable and optimized BI solutions**. Proven ability to translate raw data into **actionable insights** for business growth.
- Designed interactive **Power BI dashboards** by integrating **SAP HANA, Salesforce, Snowflake, and SQL Server**. Developed reports for **financial risk, marketing analytics, and operational efficiency**, enabling **real-time decision-making**. Optimized report performance, reducing load times by **40%**.
- Implemented complex **ETL workflows using SSIS, Alteryx, and ADF** to extract, clean, and transform **large-scale structured and unstructured data**. Automated data ingestion from **SAP, Salesforce, cloud databases, and REST APIs**, ensuring **high data accuracy and reliability**.
- Developed **predictive analytics models with Python (Pandas, Seaborn) and DAX** to assess **credit risk, fraud detection, and customer behavior**. Built **loan repayment forecasting and churn prediction models**, improving financial risk assessment and **marketing campaign efficiency**.
- Optimized **Power BI performance by fine-tuning DAX measures, indexing, and query optimization**. Reduced report refresh times by **35%** with efficient **data modeling and Snowflake optimizations**. Implemented **Row-Level Security (RLS) and Power BI Gateway** for secure data access.
- Automated **Power BI report scheduling and data refreshes** using **Power Automate, Azure Data Factory, and Power BI Service**. Eliminated **manual reporting efforts by 60%**, improving operational efficiency. Integrated **email, SharePoint, and Teams notifications** for report delivery.
- Built **Power BI Embedded Analytics solutions** to integrate financial insights into **internal web portals and executive dashboards**. Enabled **self-service analytics** for stakeholders, reducing dependency on manual data extraction and improving decision-making efficiency.
- Developed **REST API integrations between Power BI, Power Apps, and cloud platforms** for **real-time data streaming and automated data synchronization**. Reduced **data inconsistency issues by 40%** with API-based data validation and transformation workflows.
- Implemented **Agile, JIRA, and Azure DevOps** to manage BI project lifecycle, sprint planning, and stakeholder communication. Conducted requirement-gathering sessions to develop **customized, business-centric Power BI solutions**, ensuring timely project delivery.
- Led **Power BI adoption and training programs** for analysts, business users, and executives. Provided hands-on workshops on **DAX optimization, Power Query, and data visualization best practices**, enabling organizations to **maximize Power BI capabilities**.
- Proven **expertise in cloud data platforms (Azure, AWS, Snowflake, and Redshift)** to support scalable data warehousing solutions. Ensured **data governance, compliance (GDPR, SOX, HIPAA), and security policies** across business intelligence solutions, strengthening **data integrity**.

Technical skills

Business Intelligence & Visualization	Power BI (Desktop & Service), Tableau, SQL Server Reporting Services (SSRS), QlikView
Databases	SQL Server, Oracle, Snowflake, PostgreSQL, MySQL, MongoDB, Azure Cosmos DB
ETL & Data Integration	Alteryx, SSIS, Talend, Azure Data Factory, Informatica Power Center, Databricks
Cloud Technologies	Microsoft Azure (Azure SQL, Azure Data Factory, Azure Databricks, Azure Analysis Services), AWS (Redshift, AWS S3, AWS Athena, AWS DynamoDB, AWS QuickSight), Google Cloud Big Query
Programming & Scripting	SQL, Python, DAX, M-Query, T-SQL, XML, JavaScript

Data Modeling & Optimization	Star Schema, Snowflake Schema, Dimensional Modeling, Data Warehousing, OLAP Systems (SSAS, Snowflake)
Data Processing & Analytics	Power Query, Power Pivot, Python (Pandas, NumPy, Matplotlib, Seaborn), Advanced Excel, Data Mining, Data Wrangling
Automation & Workflow Management	Power Automate, Power Apps, Azure Logic Apps, Azure DevOps
Methodologies	Agile (Scrum), Waterfall, JIRA, Azure DevOps

Certifications

- [AWS Certified Solutions Architect – Associate](#) (Validation Number: 20b748fa1ca24fc1be7ca440755fb45c)
- [Azure Data Engineer Associate](#) (Credential ID: 179C7E4053AC78BA, Certification number: 104BC7-43B46C)

Professional Experience

Client: Fidelity Investments

Feb 2024 to Present

Role: Power BI & ETL Developer

Remote

Responsibilities:

- Developed interactive **Power BI dashboards** by integrating **financial, SAP, and Salesforce data** for real-time analysis. Designed reports for **loan disbursement, repayment trends, and borrower credit risk**. Improved business decision-making with data-driven insights.
- Designed and optimized **star schema models in Snowflake and SQL Server**, reducing query execution time by **40%**. Created **fact and dimension tables** to improve data retrieval and reporting efficiency. Enhanced Power BI performance with efficient data modeling.
- Built automated **ETL pipelines** using **SSIS, Alteryx, Snowflake, and Python (Pandas, NumPy)** for data extraction, transformation, and loading. Processed structured and unstructured data from **SAP, Salesforce, and OLTP databases**. Ensured high data accuracy and consistency.
- Created advanced **DAX measures and calculated columns** to generate key financial metrics like **Loan-to-Income Ratio and Credit Risk Score**. Designed **dynamic KPIs and financial models** to help risk teams assess borrower creditworthiness. Improved risk assessment accuracy by **30%**.
- Utilized **Power Query, Power Apps, and Python (Pandas, Seaborn)** for **data cleaning, standardization, and transformation**, ensuring **99.9% data accuracy**. Handled data inconsistencies from multiple sources, resolving formatting issues and missing values. Designed **automated error-handling workflows**, improving data integrity and reducing manual intervention.
- Implemented **Power Automate workflows** to automate **data refreshes, approvals, and report scheduling** in Power BI Service. Reduced manual reporting efforts by **60%** by streamlining recurring processes. Improved operational efficiency with automated workflows.
- Developed **Row-Level Security (RLS) and Power BI Gateway configurations** to enforce **role-based access control**. Ensured compliance with **financial security policies, GDPR, and SOX regulations**. Strengthened data security and governance across BI solutions.
- **Created predictive and prescriptive analytics models in Alteryx**, leveraging statistical and machine learning tools to generate insights for investment strategies. **Automated reporting pipelines using Alteryx and scheduled workflows**, eliminating manual data preparation tasks and ensuring timely report generation for stakeholders.
- Integrated **SAP HANA and Salesforce data sources** into Power BI for seamless financial reporting. Built **real-time dashboards for customer transactions, sales trends, and investment performance**. Improved data consistency across business platforms.
- Optimized **SQL queries, indexing strategies, and Snowflake-based transformations** to enhance report performance. Reduced data load times by **35%** through efficient query optimization. Improved Power BI performance for faster and smoother analysis.
- Leveraged **Python (Seaborn, Matplotlib) and Power BI visuals** to build predictive models for **loan repayment trends and default probabilities**. Analyzed economic factors affecting lending trends. Provided actionable insights for **portfolio risk assessment**.

- Automated **financial reporting workflows** using **Power BI Service, Power Automate, and Azure Data Factory**. Ensured accurate and **real-time financial insights** for executives and stakeholders. Improved reporting efficiency by eliminating manual updates.
- **Collaborated with financial analysts, risk teams, and IT stakeholders** using **Agile methodology, JIRA, and Azure DevOps**. Conducted requirement-gathering sessions to develop customized Power BI reports. Ensured timely delivery of business intelligence solutions.

Environment: Power BI (Desktop & Service), Power Query, DAX, Power Automate, Power Apps, SSIS, SQL Server, Snowflake, SAP HANA, Salesforce, Azure Data Factory, Azure Synapse, Azure Databricks, AWS Redshift, Python (Pandas, NumPy, Seaborn, Matplotlib), T-SQL, M-Query, Tableau, JIRA, Agile (Scrum), Azure DevOps, Excel, NoSQL (MongoDB, Azure Cosmos DB).

Client: Reinvestment Fund Org

Jan 2023 to Feb 2024

Role: Power BI Developer

Atlanta, GA

Responsibilities:

- Developed **Power Apps-based financial approval systems** for **loan processing and fund allocation**, reducing manual intervention by **30%**. Integrated **multi-level approval workflows** with Power Automate, ensuring compliance with financial policies. Enabled **real-time tracking of approvals** for faster decision-making.
- Integrated **SAP HANA and Salesforce data sources** into Power BI dashboards to analyze **borrower profiles and repayment behavior**. Automated data synchronization with **Power Automate and REST APIs**, reducing data inconsistency issues by **40%**. Enhanced reporting accuracy for risk assessment and credit monitoring.
- Designed and optimized **ETL workflows using Alteryx** to process large-scale **investment and loan disbursement data**. Automated data cleansing, transformation, and aggregation, reducing **manual data preparation time by 40%**. Improved reporting efficiency by creating **pre-processed datasets for Power BI**.
- Developed **Power BI Embedded Analytics** to integrate financial insights into internal **web portals and executive dashboards**. Enabled stakeholders to **access interactive financial reports** directly from internal applications. Improved decision-making by ensuring **real-time access to investment performance data**.
- Built **REST API integrations between Power Apps, Power BI, and financial systems** for seamless **loan disbursement and repayment tracking**. Automated data updates between **SAP HANA, Snowflake, and Power BI**, reducing manual data entry errors by **35%**. Improved system reliability with real-time data flow.
- **Created role-based Power BI dashboards with Row-Level Security (RLS)** to restrict financial data access based on **user roles**. Ensured **secure data sharing among Loan Officers, Risk Teams, and Compliance Managers**. Improved data security by enforcing **role-based access controls and encryption policies**.
- Optimized **Azure Data Factory (ADF) pipelines** to improve data ingestion from **Snowflake, SAP, and Salesforce**. Reduced data processing time by **25%** through efficient query tuning and parallel execution. Enhanced **cloud cost efficiency by optimizing resource utilization**.
- Developed **predictive analytics models using Python (Seaborn, Matplotlib)** to detect anomalies in **borrower repayment patterns and financial transactions**. Automated fraud detection alerts using **Power Automate and Power BI notifications**. Enhanced fraud prevention by identifying **high-risk borrowers early**.
- Implemented **Power BI report subscription automation** using **Power Automate and Microsoft Teams**. Scheduled automated report deliveries for financial teams, reducing **manual report generation efforts by 60%**. Enabled **email and SharePoint integration** for seamless distribution of investment insights.
- Conducted **stakeholder meetings and Agile sprint planning** to refine Power BI dashboard requirements. Managed project delivery using **JIRA and Azure DevOps**, ensuring timely implementation of **data visualization solutions**. Collaborated with risk analysts to improve **loan portfolio monitoring**.

Environment: Power BI (Desktop & Service), Power Query, DAX, Power Automate, Power Apps, Alteryx, SAP HANA, Salesforce, Snowflake, Azure Data Factory (ADF), Python (Pandas, NumPy, Seaborn, Matplotlib), SQL Server, REST APIs, Azure DevOps, JIRA, Agile (Scrum), Power BI Embedded, Power BI Gateway, M-Query.

Client: UberEATS

Dec 2020 to Aug 2022

Role: Data Analyst

Hyderabad, India

Responsibilities:

- Extracted and processed **millions of orders, delivery tracking logs, and customer interaction data** from **SQL Server, Snowflake, Azure, and Excel** using **Python (Pandas, NumPy) & Power Query**. This automation enhanced **data processing efficiency** and improved **data refresh rates by 40%**, ensuring **real-time insights**.

- Developed **DAX-based KPIs** to track **average delivery time, fulfillment rates, order cancellations, and rider efficiency** in **Power BI dashboards**. This **optimization** resulted in a **15% improvement in on-time deliveries**, ensuring **better logistics performance** and **reduced delays**.
- Used **A/B testing** and **predictive modeling** to analyze **customer order frequency, churn rates, and promotional effectiveness**, optimizing **customer retention strategies**. These **insights** led to a **12% increase in repeat order rates**, enhancing **customer engagement** and **marketing ROI**.
- Designed **interactive Power BI dashboards** to provide **restaurant partners** with **order volumes, peak demand trends, customer ratings, and revenue insights**. These **visualizations** improved **partner engagement by 20%**, helping **restaurants make data-driven business decisions**.
- Integrated **historical order data, weather conditions, and traffic congestion patterns** into **Power BI** to create **predictive pricing models** for **surge demand**. These **enhancements** enabled **dynamic pricing adjustments** during **peak hours**, increasing **profitability by 8%**.
- Used **Selenium WebDriver & TestNG** to automate **Power BI dashboard validation**, ensuring **report accuracy and reliability** across **multiple datasets**. This **automation** reduced **manual testing time by 30%**, improving **report integrity** and **reducing data validation errors**.
- Worked with **Operations, Marketing, and Supply Chain teams** to translate **analytics into actionable strategies** for **business growth**. These **insights** contributed to **higher logistics efficiency, better customer experience, and more informed decision-making** across departments.

Environment: Power BI, Power BI Service, Power BI Gateway, SQL Server, Snowflake, Azure Cloud, Python (Pandas, NumPy), Power Query, DAX, Azure Data Factory, AWS Redshift, Selenium WebDriver, TestNG, JIRA, Azure DevOps, Row-Level Security (RLS), SQL Profiler, DAX Studio.

Client: UnitedHealth Group

Role: Data Analyst

Sep 2017 to Dec 2020

Hyderabad, India

Responsibilities:

- Designed and developed **ETL pipelines** using **SSIS & Azure Data Factory (ADF)** to extract, clean, and transform **healthcare data** from **SFTP servers, on-premises databases, and cloud sources** into **Azure SQL** for **real-time insights**.
- Optimized **ETL processes**, eliminating **redundant transformations** and streamlining **data ingestion**, leading to a **40% improvement in data processing speed** and **reducing system resource consumption**.
- Designed and deployed **Power BI dashboards**, incorporating **DAX measures, KPIs, and drill-through functionalities** to enable **data exploration and visualization**.
- Implemented **Row-Level Security (RLS)** in **Power BI**, ensuring **compliance with HIPAA regulations** and **data confidentiality**.
- Managed **Power BI Gateways** for **data synchronization** across **cloud and on-premises sources**, ensuring **automated refresh schedules** and **up-to-date reporting**.
- Automated **Power BI report refresh schedules**, reduce **operational workload by 50%** and ensuring **timely data availability**.
- Utilized **Power Query & Python (Pandas, NumPy, Matplotlib)** for **data wrangling, preprocessing, and anomaly detection**.
- Managed **project workflows** using **Azure DevOps**, tracking **feature development, bug fixes, and task assignments**.
- Collaborated with **data engineers, business stakeholders, and healthcare professionals** to align **analytics solutions** with **organizational goals**.

Environment: Power BI (Desktop & Service), SSIS, Azure Data Factory (ADF), SQL Server, T-SQL, Power Query, Python (Pandas, NumPy, Matplotlib), SSAS, Azure DevOps, Visual Studio.

Education:

- **Master of Science (M.S.)** – Engineering Data Science, University of Houston, Texas, USA.
- **Bachelor of Technology (B.Tech.)** – Electronics and Computer Engineering, KL University, AP, India.
