PROFESSIONAL SUMMARY

Experienced ETL/Data Warehouse Test engineer and QA Analyst with 8 years of experience specializing in ensuring high-quality data across complex systems. Expertise in all phases of the Software Development Life Cycle (SDLC), Software Testing Life Cycle (STLC), and Defect Life Cycle, with a focus on testing data-driven applications. A proven collaborator in Agile and DevOps environments, contributing to seamless continuous integration and optimized data workflows. Skilled in designing and reviewing test documentation, including test plans, test cases, and project status reports.

TECHNICAL SKILLS

- **ETL (Extract, Transform, Load) Testing:** Data Validation, data transformation, data migration, data analysis, data optimization, test automation, data quality checks.
- **ETL Tools:** Informatica, Policy Migration Tool.
- **Databases:** SQL Server, Oracle, MySQL, SAP HANA, PostgreSQL, Teradata, Snowflake.
- **Big Data Technologies:** Apache Hive, Hadoop, HDFS, Apache Sqoop.
- **Cloud Technologies:** Amazon S3 (for data ingestion).
- **Programming & Scripting:** SQL, Python, PL/SQL, Shell Scripting
- **Defect Tracking Tools:** JIRA, Target deployment port (TDP)
- **Data Warehousing:** Star Schema, Snowflake Schema, Dimensional Modeling
- **Operating Systems:** Unix/Linux
- **Visualization Tool:** Tableau

WORK EXPERIENCE

Sr. Software Engineer — Zensar Technologies — Pune, India

Feb 2021 - Dec 2024

- **Insurance Domain:** Led the **migration of policies** from legacy system using **Microsoft SQL Server, PostgreSQL and SQL Developer** database applications and Policy Centre Migration tool for ETL operations to a new system called Policy Centre Management System for a U.S. Insurance Company, ensuring seamless data integration, data analysis, data reconciliation and synchronization.
- **Automated key testing processes** and regression tests including count and table structure **reconciliation** with data validation, **using PL/SQL and Python scripts**.
- Diagnosed and troubleshooted operational defects by **developing optimized and complex SQL queries** for testing. Utilized **JIRA Agile** to track progress, resolve defects, and ensure smooth collaboration between teams.
- **Collaborated with U.S.-based business analysts, architects, developers, and QA teams** to troubleshoot issues during migration and testing phases, while also **working as a Test Data Architect** to create detailed mapping documents that bridge business requirements with testing efforts.
- **Key Achievements:**
 - **Achieved seamless migration of 10,000+ policies** from a legacy system to a new platform, ensuring 98% data consistency and minimal disruption during the transition.
 - Reduced testing time to 40% with a 50% increase in data validation accuracy by **Developing and automating key testing processes** streamlining execution workflows and improving overall efficiency.
 - Reduced downtime by 30% and enhanced system reliability by Conducting **root cause analysis of production issues**

- **Telecommunication Domain:** Led the ETL testing and migration of Customer Resource Management (CRM) data of customer accounts from AT&T's U-verse (IPTV service) to DirectTV (streaming service) within the Order Management System (OMS), ensuring a seamless transition of services for U.S.-based customers.
- Validated system functionality across diverse database environments including **Oracle, Teradata, SAP HANA, Snowflake and MySQL** ensuring compatibility and stability throughout the migration process.
- Executed data migration processes using **Informatica** as ETL Tools and **PL/SQL scripts** to ensure accurate and efficient data transfer, reducing the risk of data discrepancies and ensuring customer information was correctly transferred between systems.
- Tested AT&T's network performance during peak periods on bulk accounts by **validating shell scripts for file processing in Unix and Oracle environments**, ensuring data accuracy. Collaborated with cross-functional teams to ensure seamless data transfers and accurate file transmission, using JIRA for task management and issue tracking.
- Performed ETL testing for a data migration project, validating data extraction from source systems to **Amazon S3**, loading into **Snowflake staging tables**, and applying transformations using Snowflake SQL. Ensured data accuracy, integrity, and completeness through end-to-end testing and reconciliation between source, transformed, and final data marts.
- Leveraged **Apache Sqoop** to efficiently import large volumes of customer account data from **MySQL** to **HDFS** and used **Apache Hive** for processing and querying the data, optimizing the ETL pipeline for faster, more accurate data integration.
- **Key Achievements:**
 - **Achieved successful migration of 50,000+ customer accounts** with a 95% success rate, minimizing data discrepancies during the conversion process.
 - **Ensured 99% accuracy in post-conversion** account classifications for 20,000+ customers, verifying correct service classifications after migration.
 - **Managed 15+ sub-projects** within the Alliance Data Mart initiative, overseeing 1,000+ test cases to ensure the integrity and reliability of the overall system.

EDUCATION

Bachelor of Engineering in Electronics and Communication
Rajiv Gandhi Technical University, Bhopal, India

June 2016
CGPA: 7.8

CERTIFICATIONS

- **Databases and SQL for Data Science with Python** – Coursera: Gained proficiency in SQL for querying and manipulating relational databases, and integrated SQL with Python for data analysis, cleaning, and visualization using tools including Pandas and Matplotlib.
- **Crash Course in Python** – Coursera: Learned Python programming fundamentals, developed problem-solving skills. Gained practical experience for applying Python in real-world scenarios.
- **Data Visualization with Tableau** – Coursera: Integrate diverse data effortlessly, leveraging Tableau's unparalleled data blending, joining, and computation to create insightful visuals.
