SKILLS

- Infrastructure management
- Azure
- GCP
- VMware vcloud
- Linux
- Ansible
- Kubernetes
- Service Now
- Docker
- JIRA /Slack
- Terraform
- Network basic
- Troubleshooting & debugging
- Basic Git, Jenkins CI/CD
- Microsoft excel, word

CERTIFICATIONS

Microsoft Certified: Azure Administrator Associate (AZ-104).

COURSES

PROFILE

Cloud Engineer with over 4 plus years of experience in provisioning cloud infrastructure, specializing in Linux, GCP, and Azure. Skilled in supporting, automating, managing, and optimizing mission-critical deployments in production environments. Seeking a challenging role in DevOps and Cloud, where I can further develop my skills and contribute to the growth of your organization.

EDUCATION HISTORY

Bachelor of Technology, Computer Science, 2020

Graduated with 8.3 CGPA.

WORK EXPERIENCE

Cloud and DevOps System Engineer, 04/2023 – 12/2024

TCS (Project- The Home Depot) – Bengaluru, INDIA

- Cloud Infrastructure Build and Regular maintenance on GCP.
- Managing Cloud VPC network, Firewall/ Cloud DNS entries reserving IP address in GCP.
- Resolved security vulnerabilities on tableau +WIZ and system compliances.
- VM Up + down-sizing, metadata clean-up IAM configuration, creating Network Load Balance, instance groups, health checks and Private server connection.
- Scheduling backups and creating snapshots, machine images, images as per requirements. Also, implementing Storage pool in environment.
- Create dashboard and alert policy to monitor instance health check, daily preparing the health check report.
- Deploying and configuring new VM build, and post built at OS level as well as on GCP Console as per requirements.
- Performing VMs and Load Balancer and its related GCP resources decommission activities.
- Performing RHEL and SUSE VM Lift and shift migration and In-place upgrade.

ACHIEVEMENTS

- Received the on the spot Award
- Work of excellence
- Pat on the Back Award

INTERESTS

- Sketching
- Travelling

- Manage and perform OS level tasks and Linux file systems management.
- Monitoring and managing GKE Pods/Clusters for orchestration, and automated cluster management tasks and performance.
- Coordinating and performing monthly OS patching with help of ansible and GCP OS Patch management and creating it Change on service now.
- Automating the infrastructure deployments and configuration updates using Ansible and Terraform with help of GCP Cloud Build Jobs and GitHub.
- Creating Terraform code i.e. Big Query dataset and table, load balancer, Cloud DNS.
- Creating/deploying the scripts and YAML files through ansible to optimize the automation processes for improving system
- Performing monthly ROTM FinOps tasks.

Software Engineer, 09/2020 – 04/2023

Coforge (Project-SITA) – Greater Noida, India

- Configuring and managing VMware & Azure virtual machines to meet the specifications provide by the client.
- Good troubleshooting skills on LVM and software installation. Handling upgrades, patching, and vulnerability fixes on servers.
- Resolution for network, firewall and DNS entries related issues on Linux servers.
- Managing the incidents, requests & changes and monitoring the queue on ServiceNow portal.
- Preparing YAML & scripts through Ansible on Linux machines.
- Performing the planned patching on Linux machines using Ansible playbooks and manually installation of patches in Windows machines.
- Perform troubleshooting on windows servers+ active directory tasks and Linux VM using Linux command-line (Joining with AD, monitoring performance, Configuring the LVM and Mounting/Unmounting NFS share points, installing and managing packages/application like java etc.).
- Deploy, configure, and maintain Azure compute resources as per client requirements.
- Create and manage/ monitor Virtual machines, virtual network, subnets, backup, and other Azure resources.
- Monitoring the azure/ VMware VM's through OMS portal by running KQL queries.
- Creating and managing backup of servers through VEEAM portal and Azure vault.
- Skilled at coordinating with stakeholders & cross-functional teams to ensure optimal performance. Documenting the provided services in (SOP) format.
- Providing KT sessions to new joiners, make them understand the business flow and assisting them with technical queries.
- Good understanding of CI/CD process, Strong background in Linux Administration.
- Completed the IT training such as Docker, Jenkins and worked on Docker container installation, create docker images.
