OBJECTIVE

Motivated and passionate about machine learning and artificial intelligence. Continue to learn, improve, and grow in the field of Software Engineering so that I can expand my technical skills for future development and projects.

EDUCATION

The University of Texas at Dallas

12/2024

Bachelor of Science in Software Engineering

GPA 3.1

TECHNICAL SKILLS

- 2 years of experience in Python
 - 2 years of experiences in Java
 - Exposure to Comp Vision, Machine Learning, Artificial Intelligence, SQL
 - Framework/Libraries/AWS: NumPy, Pandas, and EC2
-

ACADEMIC PROJECT EXPERIENCE

Applying Matrix Filter over Human, Computer Vision

08/2023 – 12/2023

Tools: Python, PyCharm, Pytorch, ImageNet, PowerPoint

- Creating the label colors corresponding to the segmentation classes and map each label to the corresponding RGB color to form a color image using weights.
- Applied torchvision to resize, convert to tensor flow, and normalize the image by using the mean and standard deviation from ImageNet.
- Utilize FCN (Fully Convolutional Network) to train the model/images.
- Output the images with the matrix filter tracing over the human body.

KMeans 991 Calls, Machine Learning

01/2024 – 05/2024

Tools: Jupyter, Python, NumPy, Pandas, Seaborn, Matplotlib, sklearn

- Read in a file that the professor created to find K Means.
- Group EMS, Police, and Fire into three separate columns and apply KMeans from sklearn.cluster on to the data frame.
- Create a pivot table to show the number of calls based on the zip code.

8-Puzzle Solver Using a Searching Algorithm, Artificial Intelligence

06/2024 – 08/2024

Tools: Python, Pycharm

- Implemented four search algorithms in Python: DFS, Iterative DFS, and A star with two different heuristics functions.
- Utilize dequeue to create DFS and Iterative DFS algorithm and heaps to create A star algorithm.
- Applied heuristic functions of Misplacement or Manhattan Distance onto A star algorithm for optimal path.

Python Automated SNMP

08/2024 – 12/2024

Tools: VS Code, Flask, Angular, SNMP Framework, Google Docs

- Implemented the “read” function where it returns information of the SNMP devices.
- Implemented the “write” function where it allows the user to make changes and automatically apply to the current devices.
