Lead Business Analyst / Project Manager

SUMMARY

- **Result oriented** team lead with over twenty-six years of IT experience including **fifteen + years of strong Business Systems Analyst and Project Management** experience.
- Extensive experience in leading teams on all phases of software development life cycle including proposals, gathering, managing and documenting requirements, supporting development, and testing teams using Waterfall, and Agile methodologies.
- Exceptional **Project Management skills**. Proficient with Microsoft (MS) Project, and in managing schedules, milestones, priorities, resolving impediments, and resources in a matrix organization.
- Efficient in communicating with the business units and technical groups. Managing and translating information into **business requirements and functional specification documents**.
- Critical thinking and effective problem-solving capabilities with proven ability to manage challenging client expectations and relationships.
- In-depth experience in leading QA & UA **functional testing** activities including development of Test Plans & Test Cases.
- Proficient in creating Unified Modeling Language (UML) diagrams such as Use Cases, Activity, State Chart, Sequence, Collaboration, Deployment, Data Flow (DFDs), Entity Relationship (ER) diagram, and screen mock-ups (Wireframes) using MS Visio and Rational Rose.
- Implemented **quality frameworks** such as ISO and CMMI in projects. Participated in process improvement, change management, and process reengineering activities.
- Ability to **work independently** and in a cross-functional and multi-vendor team environment and/or interface with business users, developers, production support groups, project managers, and senior management located at multiple locations.
- Resourceful, fast learner with an ability to work on multiple projects, inspire, and lead teams. Decisive, dynamic self-starter, creative, enjoy challenges and with effective presentation skills.

EDUCATION (World Educational Services (WES) Evaluated)

- ❖ Master of Engineering in Electrical Engineering (Specialization: Control Systems) – Birla Institute of Technology, Mesra (Ranchi)
- ❖ Bachelor of Engineering in Electrical Engineering – Bihar Institute of Technology, Sindri (Dhanbad)

CERTIFICATIONS

- AWS Certified Solutions Architect Associate (preparation in progress, target date June, 25)
- AWS Cloud Practitioner (November- 2024)
- ITIL® v3 Foundation
- Certified Scrum Master (CSM)
- SAFE Scaled Agilist (SA) and Product Owner / Product Manager
- Project Management Institute (PMI) - Project Management Professional (PMP) Certification

- Life Office Management Association (LOMA) – Step one.
 - FLMI LOMA Exam: 290 Insurance Company Operations
 - FLMI LOMA Exam: 280 Principles of Insurance: Life, Health, and Annuities
- FLMI LOMA Exam: 330 Management Principles and Practices
- MCP: 70-300 Analyzing Requirements and defining .NET Solution Architectures.
- MCP: 70-306 Developing and Implementing Windows-based App with VB .NET
- MCP: 70-176 Designing and Implementing Desktop Applications with MS Visual Basic 6
- MCP: 70-229 Designing and Implementing Databases with MS SQL Server 2000 Enterprise
- Certificate program in Risk Management, Payment Cards, and Investment Banking Competency by TCS

PROFESSIONAL EXPERIENCE

Organization: Optum Serve Technology Services (OSTS)

Columbia, Maryland January, 2011 – present

OSTS brings together advanced data and technology, deep clinical experience and professional partnerships — making health care smarter and simpler for Federal, State, and Commercial organizations.

Two times winner of CEO's Special Talented Achievement Reward (STAR),

Two times winner of UHG Bravo, Amethyst Award

Role: Senior Business Systems Analyst

December 2014 – till date

The project: **Health Insurance Exchange (HIX) – Data Service Hub (DSH)** (ACA)

As part of the Affordable Care Act (ACA), 2010 Centers for Medicare & Medicaid Services (**CMS**) has pursued collaboration with the states for the establishment of a HIX in every state. The states that do not have their own state-run exchange use the Federally Facilitated Marketplace. The states leverage DSH which provides common services and interfaces to Federal and Private agencies.

Responsibilities:

- Leading and directing a team of (10) product owners and interfacing with the client & external stakeholders.
- Taking **product ownership** of modules and coordination with various internal and external stakeholders such as infrastructure teams, applications teams, data architects, integration architects, security architects, and strategic partners to accommodate the business requirements & strategy.
- **Leading the requirements session and designing solutions** with the client and external stakeholders, development & review of Business Specification Documents (**BSDs**) and Interface Control Documents (**ICDs**).
- **Presentation and walkthrough** of requirement artifacts to the stakeholders and conduct knowledge sharing sessions. **Guiding development and testing** team in understanding the requirements & test strategies.
- **Managing the entire** development & implementation of web services including migration of entities and assisting production operations.

Environment: MS Viso, MS project, SOAPUI, XML, XSLT, XSD, WSDL, SOAP, JSON, AWS, EDI, JIRA, Confluence, MarkLogic, Schematron, and SharePoint.

Role: Project Manager (System Integrator)

December 2012 – March, 2014

The Project: **Change Utility (CU)** (ACA)

The CU system provides Eligibility Support Staff and Appeals Support Staff with the ability to review and edit the data submitted on Federally Facilitated Marketplace (FFM) applications. Main features of this system are to edit eligibility parameters and income, recalculate program eligibility, and submit versioned applications to FFM.

Responsibilities:

- **Handle project management tasks**; scope and schedule definition, work estimation, resource planning and management of milestone/deliverable targets.
- Guiding analyst, development and testing team in understanding the requirements for business and technical services. Facilitating meetings and discussions. Integrate existing systems with COTS products.
- Be a **system integrator** and coordinate with various internal and external stakeholders such as infrastructure teams, applications teams, data architects, integration architects, security architects, and strategic partners to accommodate the business and technical strategy.
- Managing code deployments in various test and production environments via release management team.
- **Accountable for** ensuring quality of **project deliverable** and maintaining customer satisfaction.
- Managing budget, cost variance, project schedule, risks and delivering project reports & dashboard to client.
- Implementing CMS and QSSI processes, and ensuring quality standards & compliance are maintained.

Role: Senior Business System Analyst

January 2011 – November, 2012

The project: CMS **HITECH** Electronic Health Record (EHR) incentive grant program

HITECH (Health IT) is part of the Economic and Clinical health Act which provides incentive grants to eligible providers and hospitals if they follow certain guidelines on implementing, maintaining and exchanging EHR.

Responsibilities:

- Creation of project plan, release planning, strategies, and **allocation of work to team members** to ensure effective utilization for resources and achieving project objectives.
- Coordination and communication with CMS, external partners, senior management, and internal partners located at multiple sites.
- Track and monitor Project Schedule, conduct meetings to discuss requirement clarification, **status**, **risks**, and conflict resolution.
- **Guide, assist, and monitor** the team to ensure development of quality test cases, convene review meetings, and evidence file reviews.
- **Supervise release end activities** such as archiving of artifacts, and delivery of final test specifications to CMS, and lessons learned.
- Ensure team and project compliance to **Capability Maturity Model Integration (CMMI) Maturity Level ML5** processes.

Environment: MS Viso 2010, MS project, HP Quality Center 10.0, DB2, IBM Data Studio, MicroStrategy, XML, SOAP1.2, DOORS, and SharePoint.

Organization: The Active Network | Outdoors, Clarksburg, Maryland

January, 2008 – January, 2011

Role: Senior Business Systems Analyst

The project: **Hunting, fishing and campground reservation** management solutions

The Active Network, Inc. provides technology applications and marketing services to community service organizations worldwide and is a leading online destination for active lifestyles.

Active Outdoors designs, builds, hosts, and operates specialized business solutions for state and federal government contracts to sell hunting and fishing license, and manage campground reservation services. The solution includes harvest reporting through an automated Interactive Voice Recognition (IVR) system.

Responsibilities:

- **Elicitation and management** of customer's functional and system requirements. Facilitating workshops and **Joint Application Design (JAD)** sessions.
- Business Process and UML Models, Proof of concept, prototype, activity, and work flow diagram development. Gap analysis & development **of use cases, and test cases**. User Interface design.
- **Guiding development and testing** geographically diverse team in understanding the requirements.
- In depth testing including manual execution of test cases for smoke, regression, system integration, and User Acceptance Testing (UAT) testing. Development and execution of automation test scripts for **Functional testing**.
- Preparation of **traceability matrix and user manual**.
- Client **demonstrations** of requirements, documents, and prototypes.
- **Data conversion, Extract, transform and load (ETL)** and **reports** requirement analysis and strategies.

Environment: Windows XP, MS Office, MS Visio, Axure, MS project, Quick Test Professional 10.0, Neo Load, SpiraTeam, JIRA, SharePoint, UML, and Enterprise Architect.

Client: *CONSECO Insurance Company, Carmel, Indiana*

October 2007 – December 2007

Role: *Business Systems Analyst*

The project: ***Lifepro upgrade and conversion***

Conseco's insurance companies distribute their products in three ways:

- Conseco Insurance group companies distribute through independent insurance agents.
- Bankers Life and Casualty distributes through career Bankers insurance agents.
- Colonial Penn Life distributes direct to customers via television, internet and direct mail.

Objective of this project is to convert the different interface, new business, and policy administration systems, and to upgrade existing LifePRO V7.04 to LifePRO V13.

Responsibilities:

- Identification of stakeholders and creation of **project initiation requests** & approval document.
- **Elicitation, analysis and management** of requirements. Authoring **Business Requirement documents** and **Functional Specification**.
- **Tracking of requirements throughout the SDLC** using **Caliber RM, and Quality Centre**.

Environment: Windows XP, MS Office, MS Visio, CaliberRM, Mercury Quality Centre, LifePRO V13

Client: *Nexus Insurance Brokers, Kolkata, India*

July 2007 – September 2007

Role: *Business Systems Analyst*

The project: ***IFA (Independent Financial Advisors) Administration System***

Nexus Insurance Brokers distribute Life and General Insurance products of various leading insurers. Nexus has a strong IFA community who perform sales. The IFA Administration system is the primary application to manage the day-to-day business including product, financial need analysis, commissions, accounting, human resources (HR) transactions implemented in Oracle 11i E-Business Suite comprising CRM, Finance and HR Modules.

Responsibilities:

- **Business Requirements** covering all the core business modules such as **Client & Policies, Fact Find, Commissions and MIS report**.
- **Analysing complex actuarial formulas** and its interpretation to the technical team.
- Preparation of Functional Specifications.

- Review of **Test Plan**, and **Test Cases** and supporting **testing teams**.

Environment: Windows XP, Oracle 11i, Developer 2K, UNIX, MS Office, and MS Visual Source Safe.

Organization: *Tata Consultancy Services*

April, 99 – May, 2007

Tata Consultancy Services Limited (TCS) is the world-leading information technology consulting, services, and business process outsourcing organization that envisioned and pioneered the adoption of the flexible global business practices that today enable companies to operate more efficiently and produce more value.

Following illustrates my experience on different projects in descending chronological order:

Client: *Life Insurance Corporation, Kolkata, India*

November 2006 – May 2007

Role: *Business Systems Analyst*

The project: **Business Automation Software for Marketing Intermediaries**

LIC Insurance Corporation of India (LIC) is one of the largest life insurance companies in the world. Established in 1956, Corporation has a pan-India presence and has a global presence. The Corporation has about 20,000 Development Officers and more than 1.1 million agents on its rolls.

The goal of the project was to develop a system that supports the steps in the selling process such as needs analysis, sales concepts, illustrations, hypothetical, forms generation and application processing. The application should manage all point-of-sale activities from a single platform like increasing the productivity of agents, speed to market, and reducing expenses.

Responsibilities:

- **Assessing users' need** to determine functional and business requirements for the software application. Wrote a **white paper** on the functional needs of the software application.
- Facilitating **JAD** sessions for eliciting requirements and conflict resolution.
- **Perform the analysis & design workflow** for the system by following the Rational Unified Process (RUP). Help developers in creation of prototypes.
- **Facilitate building of domain understanding** to address business needs across project team.
- **Preparation of process manual** to explain functionalities of system.

Environment: Windows XP, MS Office, Visio, RUP, UML, Rational Requisite Pro, Document Management System, and Oracle Lite 10.2.

Client: *Prudential Financial, Roseland, New Jersey*

April 2006 - October 2006

Role: *Project Manager*

The project: **Credit Card for Initial Premium (Term product)**

Prudential Financial companies serve individual and institutional customers worldwide and include The Prudential Insurance Company of America, one of the largest life insurance companies in the U.S.

The objective of this project is to develop a solution (in Front Office and LifePro) to accept credit and debit cards for the payment of Initial Premium on Term life insurance policies submitted via the Direct Response General Agency sales channel (DRGA). This \$1.5m project involved 13 major Prudential systems, DRGA and credit card vendors.

Responsibilities:

- **Preparation of High-level Estimates** using functional point analysis for Project Initiation Requests.
- **Project Plan Development** which includes scope, time, cost, resource, quality, risk, communication, and vendor management plans. Resolving impediments.

- Team building and **execution of Project Plan** and monitoring of product scope to completion. Review **Front Office Functional Specifications** for changes. On-site and Off-site team coordination.
- **Monitoring and status reporting**, presentations periodically to the management and end users during various phases of Software Development Life Cycle (SDLC) and training end users.
- Overall **E2E Integration test plan development** which includes test strategy, environment set-up, problem reporting & tracking, and risks management. **Execution of E2E Integration test plan.** Conducting daily meetings for progress and status. Coordination of QA, UA and production rollouts.
- **Documenting lessons learned** and **closure activities** such as achieving project record and documenting business users' feedback.

Environment: Windows XP, MS Office, MS Project, Visio, LifePro, Lotus Notes, Oracle 10g, and FileNet.

Client: Navisys (Accenture), New Jersey

May 2005 - March 2006

Role: Business Systems Analyst

The project: **New Business and Policy Administration systems**

Navisys (part of Accenture) with over sixty leading **Life and Health** insurers and distributors. Front Office (FO) and Home Office (HO) are two main products of Navisys.

FO provides platform-neutral, offers unmatched customer sales experience to producers, policyholders and home office staff. For providers, it helped in streamlining sales and service, completing illustrations, quotations and applications quickly, closing sales, and building lasting customer relationships.

HO provided a way to streamline back-office processes for **Life and Health insurance**. The Home Office consisted of Product Manager, Rules Engine, Workflow, Application, Case Management, Underwriting, Issue service, **claims** and policy administration.

Responsibilities:

- **Elicitation of Business Requirements.** Interaction with stakeholders to get understanding of the business processes including **project estimations/timelines**.
- **Preparation of Business Requirement documents** including gap Analysis.
- Participated in process improvement, change management and process reengineering activities.

Environment: Windows XP, MS Office, XML, PVCS, Rational Requisite Pro, Rational Rose 2000, and Rational Performance & Functional Tester.

A list of other clients and projects I worked for:

Client: AMEX – AEFA (presently know as Ameriprise), Minneapolis

November 2003 - April 2005

Role: Senior Business System Analyst (VB and SQL Server)

Project: Decision Support Initiative

Client: Uranium Corporation of India Limited, Kolkata, India

May 2002 – November 2003

Role: Project Manager (VB and Oracle)

Project: Online Financial Accounting system

Client: Computer Sciences Corporation, Cambridge, UK

July 2000 to April 2002

Role: Developer (VB and SQL Server)

Project: Application Support

TCS's Health Care Group, Mumbai, India

June 1999 to May 2000

Role: Developer (VB and SQL Server)

Project: Hospital Management System (RCM)
