

VAMSHI KRISHNA

Phone: 4148654859 ♦ Email: vamshikrishnatessa98@gmail.com

Address: 21760 Mary Lynn Dr Brookfield WI 53045

PROFESSIONAL SUMMARY:

- Around **4 years of iOS application development experience** specialising in **Swift, SwiftUI, and Objective-C** to deliver high-performing mobile applications.
- **Skilled in applying Clean Architecture principles**, structuring apps into distinct layers (presentation, domain, data) for improved modularity, scalability, and maintainability.
- **Experienced in designing ViewModels** independent of UI and business logic for efficient unit testing and easier testing of the presentation layer.
- **Proficient in MVVM and MVC architectural patterns** for creating modular, maintainable, and testable codebases that enable faster development and easier debugging.
- Expertise in **Cocoa Touch frameworks** like UIKit, Core Data, Core Animation, and Foundation to build user-friendly applications.
- **Skilled in leveraging CocoaPods** for efficient dependency management and integrating third-party libraries to accelerate development.
- **Adept at designing reusable UI components** with UIKit and SwiftUI, following Apple's Human Interface Guidelines for consistent user experiences.
- Experience in building **responsive applications using MVVM**, improving code organisation, scalability, and clear separation of concerns.
- **Proficient in integrating backend services** through **RESTful APIs and GraphQL** within MVVM and MVC architectures for efficient data flow.
- **Familiar with Swift Package Manager** alongside CocoaPods for streamlined dependency management and build processes.

- **Skilled in debugging and optimising applications** using Xcode Instruments for improved performance and memory management.
- **Comprehensive experience in implementing observer patterns**, delegates, and bindings within MVVM for efficient data binding and UI updates.
- Strong knowledge of **modularizing codebases with MVC** to improve code readability, maintainability, and scalability in team environments.

TECHNICAL SKILLS:

- **ProgrammingLanguages:**Swift, SwiftUI, Objective-C, C++.
- **Architectures Patterns:**MVVM, MVC, Singleton, Observer, Delegation, Dependency Injection
- **Frameworks:**CocoaTouch , UIKit, CoreData, CoreAnimation, Foundation, SwiftPackageManager, Combine
- **DependencyManagement:**CocoaPods, Swift PackageManager
- **UIDevelopment:**SwiftUI, Storyboards, AutoLayout, InterfaceBuilder, Programmatic UI, Custom UI Components
- **Backend Integration:**RESTfulAPIs, JSON, XML, Alamofire, URLSession
- **Storage Persistence:**CoreData, SQLite, UserDefaults, KeychainServices
- **Testing Frameworks:**XCTest, XCUITest, Quick, Nimble
- **Version Control:**Git, GitHub, GitLab, Bitbucket
- **Performance Optimization:**XcodeInstruments, MemoryDebugger, TimeProfiler, Energy Log.

WORKEXPERIENCE:

iOS Developer

Albertsons 09/15/2024 to present

<https://apps.apple.com/us/app/albertsons/id582487291>

Location: Dublin ,California

Job description:

As an **iOS Developer** at Albertsons, my role involved designing and implementing mobile applications to enhance the customer shopping experience. You contributed to developing userfriendly, scalable, and high-performance mobile applications tailored to meet the needs of customers and internal stakeholders. You worked collaboratively with cross-functional teams, including designers, backend developers, and project managers, to deliver innovative solutions that streamlined the grocery shopping journey.

Responsibilities:

- Designed and developed the UMA Pantry feature using the VIPER architecture, ensuring modularity, scalability, and maintainability.
- Built intuitive and dynamic UI components for the Pantry feature, enhancing user engagement and streamlining the
- Implemented robust Interactor logic to handle business rules and integrated data from backend services via RESTful APIs.
- Developed seamless routing mechanisms to navigate between
- Performed rigorous unit testing and integration testing to validate the functionality of VIPER components (View, Interactor, Presenter, Entity, Router).
- Optimized API response handling and reduced app load times, improving overall performance and responsiveness of the Pantry feature.
- Collaborated with designers, backend engineers, and stakeholders to align the Pantry design with user needs and business goals.
- Ensured future-readiness of the Pantry feature by implementing reusable components and conducting periodic code reviews.

Environment: The UMA Pantry feature was developed using Swift and the VIPER architecture for modularity. Key tools included UIKit, SwiftUI, Core Data, and integration via RESTful and GraphQL APIs. Development used Xcode with testing in XCTest and Firebase Test Lab, while Git, Jira, and Crashlytics supported collaboration and error tracking.

Tools: Swift, Objective-C, UIKit, SwiftUI, Core Data, RESTful APIs, GraphQL APIs, Xcode, XCTest, Firebase Test Lab, Instruments, Git, Jira, Confluence, Crashlytics.

iOS Developer:

Bank of America 05/2023 to 06/2024

<https://apps.apple.com/us/app/bank-of-america-mobile-banking/id284847138>

Location : New Jersey, Edison

Job Description:

Designed and developed secure, scalable iOS apps using Swift, SwiftUI, and Objective-C, implementing advanced authentication with Keychain Services and biometric methods.

Applied MVVM architecture for clean separation of concerns and followed Clean Architecture principles to enhance maintainability. Integrated RESTful APIs and GraphQL for real-time data and managed data flow through ViewModels. Conducted unit/UI testing with XCTest and XCUITest for app stability, and implemented CI/CD pipelines for efficient delivery.

Responsibilities:

- Developed and maintained secure, scalable iOS applications using Swift, SwiftUI, and Objective-C, ensuring high-quality mobile banking solutions.
- Integrated backend services with RESTful APIs and GraphQL for real-time data fetching, enabling fast and reliable user experiences.
- Implemented advanced user authentication features using Keychain Services, OAuth, and biometric methods (Touch ID/Face ID) to ensure secure access.
- Utilized **MVVM architecture** to separate concerns between the UI (View) and business logic (Model), ensuring that **ViewModels** handle presentation logic, making the codebase more **maintainable** and **testable**.
- Designed the app with a clear separation into **presentation, domain, and data layers** following **Clean Architecture** principles. This structure improved **scalability** and ensured that business logic could be modified independently without affecting the **ViewModel** or **UI**.

- Developed **ViewModels** that were independent of the UI and business logic, facilitating **unit testing**. The **ViewModel** communicated with the **Domain Layer**, allowing for comprehensive **test coverage** without UI dependencies.
- Managed the flow of data through the **Data Layer** (for backend interactions) to the **ViewModel** before presentation, ensuring that data was transformed and presented in a clean, efficient manner. This approach maintained **data integrity** and **modularity** across the app.
- Followed MVVM architecture to separate concerns, improving the maintainability, scalability, and testability of the app.
- Created and maintained unit and UI tests using XCTest and XCUITest, achieving high code coverage and ensuring the app's stability.
- Utilized CocoaPods for managing third-party libraries and dependencies, ensuring easy integration and maintenance of external tools and frameworks.
- Followed best practices in security, privacy, and performance optimization, ensuring compliance with Bank of America's regulatory and user safety standards.

Environment: iOS application development with **Swift**, **SwiftUI**, and **Objective-C**; integrated backend services with **RESTful APIs** and **GraphQL** for real-time data fetching; utilized **Core Data** for local data storage and offline functionality; implemented security protocols with **Keychain Services**, **OAuth**, and biometric authentication methods (Touch ID/Face ID); followed **MVVM architecture** and **Clean Architecture** for modular and testable app design. **Tools:** Xcode, Swift, SwiftUI, Objective-C, CocoaPods, Firebase, RESTful APIs, GraphQL, Core Data, XCTest, XCUITest, Jenkins, Fastlane, Git, GitHub.

VB solutions , India (Remote) —05/2019-03/2022

Location: JP Nagar , Bangalore

iOS developer:

Job description:

Converted the app's outdated Objective-C code to Swift, updating its functionality. Using Keychain Services and OAuth, secure authentication functionalities were developed. improved app speed with Xcode Instruments debugging and memory optimization. used

UIKit and Cocoa Touch to work together on developing a modular user interface. Using XCTest, comprehensive unit testing was used to guarantee application dependability.

Responsibilities:

- **Migrated legacy codebases to Swift**, modernizing app functionality and aligning with **MVVM architecture** for more scalable and maintainable code.
- Built secure authentication mechanisms using **OAuth** and **Keychain Services** to protect user data and privacy, while keeping the **Model** and **ViewModel** layers independent of authentication logic.
- Designed and implemented modular UI components with **UIKit** and **Cocoa Touch**, adhering to best practices for maintainable code and keeping UI components separated in the **View Layer**.
- Integrated **Core Data** for local storage solutions, enabling efficient data persistence and synchronization across devices while maintaining the **Data Layer** separation.
- Utilized **CocoaPods** to manage external libraries, ensuring smooth integration and dependency management across layers.
- Created and executed test cases with **XCTest** to validate functionality and ensure reliable app performance, following **Clean Architecture** to ensure that tests focus on business logic and not on UI details.
- Optimized app memory usage and enhanced performance by debugging with **Xcode Instruments** and applying best practices, preserving the separation of concerns within the app's architecture.
- Collaborated with cross-functional teams, including **UI/UX designers** and backend developers, to meet project deadlines and maintain **modular code structure**.

- Implemented **RESTful APIs** for seamless communication between the app and backend services, ensuring efficient data retrieval and updates while following Clean Architecture principles.
- Participated in regular code reviews, promoting **code quality** and **knowledge sharing** within the team, ensuring **modular, testable** code.
- Delivered app updates and enhancements based on user feedback, ensuring continuous improvement and user satisfaction.
- Followed **MVVM** and **MVC** design patterns for scalable, maintainable, and testable app architecture.

Environment: iOS application development with **Swift, SwiftUI, and Objective-C**, following **MVVM** and **MVC** design patterns. Used **Cocoa Touch** for native iOS components and **CocoaPods** for managing libraries. Integrated **Core Data** and **Firebase** for data persistence and real-time syncing.

Tools: Xcode, Swift, SwiftUI, Objective-C, Cocoa Touch, CocoaPods, Core Data, Firebase, RESTful APIs, GraphQL, Git, Bitbucket.

EDUCATION:

Master's in Business Administration (Information Systems)

Graduated on June 2023

Concordia University
