Mobile: 3802545359

Email: vklneni396@gmail.com

Sr. Backend Developer

PROFESSIONAL SUMMARY

- Senior Software Engineer with 12 plus years of IT industry experience, involved in all phases of the Software Development Life Cycle (SDLC) and developing applications across various domains.
- Proficient in core Java object-oriented features such as multithreading and collections.
- Extensive experience utilizing design patterns including MVC, Singleton, Facade, DAO, DTO, and Business Delegate for Multi-Tier distributed Enterprise Applications.
- In-depth knowledge and implementation skills in the Spring MVC framework (Core, Context, AOP, MVC, Security, Batch, Boot), and JSF Framework.
- Experience working with distributed n-tier applications using Java and J2EE technologies in Insurance, Financial Services, and health care.
- Proficient in UX design and development, creating interactive web pages using HTML5, CSS3, Bootstrap, JavaScript, JSON, jQuery, AJAX, AngularJS, and ReactJS.
- Experienced Java and Kotlin developer specializing in building scalable enterprise applications with Spring Boot, Microservices, and RESTful APIs. Skilled in backend development, cloud computing, and modern software architectures, with a strong focus on performance optimization and maintainability.
- Set up and managed user roles in IAM systems, making sure that each user only had access to the resources they needed, following the principle of least privilege.
- Utilized frameworks such as AngularJS, React JS, Struts, Spring, Hibernate, JSF, and jQuery.
- Developed SPAs using AngularJS, leveraging core directives, expressions, and modules.
- Strong programming skills in Java 1.6/1.5/1.8//11/17, XML, Spring, Hibernate, JPA 2, JTA, JNDI, JSP, Servlets, JavaBeans, JSTL, and JDBC.
- Designed and built web applications using Java/J2EE Technology, AWS, and open-source technologies.
- Extensive experience in agile methodologies such as Test-Driven Development (TDD) and SCRUM.
- Proficient in RDBMS concepts with hands-on experience in MySQL 5.0, Oracle 9i/10g, and SQL Server.
- Incorporated Groovy-based Gradle scripts into CI/CD pipelines to automate testing, building, and deployment processes using tools like Jenkins.
- Developed high-performance, scalable microservices using Golang, utilizing frameworks like Gin and Echo for building RESTful APIs.
- Extensive experience in writing clean, efficient, maintainable Python code for various applications use cases.
- Knowledge of integrating machine learning models into data workflows to enhance predictive analytics and automate decision-making.
- Use secure storage solutions such as AWS KMS, Azure Key Vault, or Google Cloud's Data Loss Prevention API to manage encryption keys and protect sensitive information.
- Proficient in SQL and PL/SQL, developing stored procedures, triggers, functions, and packages, and writing DDL, DML, and transaction queries using tools like TOAD and Rapid SQL.
- Expertise in building applications using Rational Unified Process (RUP), UML, and Object-Oriented Analysis and Design (OOAD).
- Developed web applications using Grails, including creating controllers, services, and views. Also, built custom plugins to extend functionality and improve system performance.
- Utilized Azure Kubernetes Service (AKS) to orchestrate and manage containerized applications, enhancing deployment speed and reliability.
- Implemented event-driven architectures using Azure Event Hubs for real-time data ingestion and stream processing.
- Utilized Flask to create flexible and scalable web applications, employing a lightweight framework to streamline the development process.
- Experience with AWS services such as EC2, S3, RDS, ELB, and EBS for installation and configuration.
- Proficient in version control systems including SVN, TFS, GIT, and CVS.
- Extensive experience with continuous integration tools like Jenkins and issue tracking using JIRA.
- Competent in tackling new challenges, adaptable to various cultural and business environments, and a good team player with problem-solving skills.
- Excellent communication and interpersonal skills.

- Proficient in modern JavaScript (ES6+), implementing both client-side and server-side logic.
- Skilled in using the latest version of Angular for building dynamic and responsive single-page applications with robust component architecture.
- Expertise in developing user interfaces using React, implementing components, hooks, and state management for scalable web applications.
- Extensive experience using ReactJS to build complex, high-performance web applications with reusable components.

TECHNICAL SKILLS:

- **Languages:** Java, J2EE, Python, Golang, C, C++
- **Web Technologies:** HTML, JavaScript, CSS, JSON, AJAX, XML, ESAPI, jQuery, AngularJS, Angular 10, Angular 12, Angular 14, Groovy & Grails.
- **J2EE Technologies:** Servlets, JSP, EJB, JMS, JNDI, Web Services, JDBC, SOAP
- **ORM technology:** Hibernate.
- **Application servers:** Apache Tomcat 5.x, IBM WebSphere 7.x, IBM Infosphere 11.3, OC4J, Docker
- **Frameworks:** Jakarta Struts, spring, Flask, Django, IBM JADE, Log4J, SLF4J
- **Databases:** Oracle, MS SQL Server, My SQL and IBM DB2, Postgres
- **Web Services:** SOAP, REST, WADL, XML
- **Source Version Control Tools:** Win CVS, BitBucket, SVN, GIT, GitHub
- **Testing Framework:** Web UI API automation, Citrus, Cucumber, Selenium
- **Other Tools:** Putty, Rapid SQL, IBM DB2 client, CISM, JIRA, SQL Developer
- **Methodologies:** Waterfall, Agile methodology

PROFESSIONAL EXPERIENCE

Senior Software Developer

Capital One CA, USA

Jan 2023 to Feb 2025

Responsibilities:

- Successfully converting a legacy application into a cloud-native environment with Docker, Kubernetes, microservices, AWS, Spring Boot, and Spring Cloud, significantly improving scalability, reliability, and performance.
- Architected and developed SPAs using Angular 12 & 14, implementing advanced features such as reactive forms, RxJS for state management, and Angular CLI for efficient build processes.
- Led the transition of legacy systems to modern Angular-based interfaces, improving user experience and system performance.
- Developed modular and reusable Angular components, optimizing the codebase and facilitating future scalability.
- Utilized Angular Material to create responsive and accessible UI components, adhering to industry standards and best practices.
- Participating in the complete Software Development Life Cycle (SDLC) and following agile methodologies to deliver high-quality software models.
- Developed MVC/web-based applications using Core Java versions 8, 11, and 17, Java FX, JDBC multithreading, collections, Spring Frameworks, Servlets, EJB, JavaScript, HTML/DHTML, and CSS.
- Used Angular 14 to create Single and multiple Page Applications to bind data to specific views and synchronize with the server.
- Developed responsive UI web pages using Angular 12 & 14, TypeScript, and Node JS and worked with angular filters in expressions and directives to filter data in the UI.
- Developed CI/CD pipeline with Docker integration, automating build, test, and deployment processes for seamless deployment, and managing configuration changes through YAML file updates for consistency across environments.
- Promoting Agile methodologies and leading teams in dynamic project settings to ensure rapid and efficient project completion.
- Proficiently managed and deployed applications across various operating systems, including Linux, Windows, and MacOS.
- Optimizing system performance and security to ensure reliable software execution in diverse environments.

- Demonstrating excellent written and verbal communication, analytical and problem-solving skills, attention to detail, and the ability to work independently or lead a team.
- Developed real-time machine learning solutions using Apache Kafka, Apache Flink, and Spark Streaming to process streaming data and enable immediate, on-the-fly predictions.
- Experienced in managing key AWS services such as IAM, ECS/EKS, EMR, S3, Lambda, and Serverless to design and implement scalable, secure cloud solutions.
- Created and maintained IAM policies, roles, and permissions to secure resource access.
- Emphasizing Test Driven Development by creating detailed JUnit tests before implementing functionality.
- Leveraged AI-driven automation to accelerate incident response, such as using ML models to prioritize security alerts and guide remediation actions.
- Implemented Amazon Cognito to handle user authentication and authorization for web and mobile apps, including setting up multi-factor authentication (MFA) and connecting with social and corporate identity providers
- Utilized Swagger to auto-generate API documentation, improving API collaboration and integration with front-end teams.
- Experience with Apache Spark and Databricks to develop data pipelines, process large datasets, and support data-driven insights.
- Expertise in using Snowflake for cloud data warehousing, enabling fast, scalable, and secure data storage and retrieval.
- Deployed and managed machine learning models in production using AWS Sage Maker, handling model training, tuning, and real-time inference.
- Leveraged pre-trained transformer models for NLP tasks, including text classification, sentiment analysis, and named entity recognition.
- Improving query efficiency by implementing indexes, query caching, database partitioning, query optimization tools, and database sharding.
- Leading initiatives to secure web communications by deploying HTTPS protocols and installing SSL/TLS certificates to enhance website security.
- Documenting software designs, technical specifications, and implementation details while providing technical guidance and support to team members.

Environment: Java, Spring boot, Angular, JavaScript, HTML/DHTML, CSS, JSP, Core Java (versions 8, 11, 17), Java FX, JDBC, Python, Servlets, EJB, Spring Framework, Spring Cloud, OAuth, JWT (JSON Web Tokens), Hibernate, IAM, JPA, PL/SQL, Oracle DB, ELK stack (Elasticsearch, Logstash, Kibana), Groovy, Log4j, Docker, Kubernetes, AWS, CI/CD, Terraform, GIT, Bitbucket, JUnit, HTTPS, SSL/TLS certificates, Linux, Database partitioning, Query caching, Database sharding

Sr. Backend Developer

JP Morgan Chase & Co, Plano, TX

August 2021 to Dec 2022

Responsibilities:

- Utilized JavaScript Object Notation (JSON) for validating documentation data required by the application.
- Worked with AWS Elastic Beanstalk to deploy the application into appropriate environments.
- Developed online web applications using HTML, CSS, JavaScript, Angular/Angular 12, Vue.js, Node.js, Spring Boot, Spring MVC, and Bootstrap.
- Redesigned existing applications using Angular 10/12, implementing advanced Angular features like lazy loading, AOT compilation, and custom directives.
- Collaborated closely with backend teams to ensure smooth integration of Angular front ends with Spring Boot microservices, maintaining a consistent and secure communication channel.
- Redesigned an existing application and updated it with Angular 10/12 in an advanced workspace.
- Developed applications using Angular, Node.js, Express.js, MongoDB, Angular-UI, HTML5, Bootstrap.
- Utilized Apache Log4j for capturing logs, including runtime exceptions.
- Configured AWS CloudWatch to monitor memory utilization, and server performance, and implement optimal actions for enhanced performance.
- Developed high-performance, scalable microservices using Golang, utilizing frameworks like Gin and Echo for building RESTful APIs.
- Implemented React 16.8 to enable navigation between views as agents perform application tasks.
- Developed various Angular directives to enhance functionality and UI behavior using JavaScript, with extensive use of Angular directives to add functionality to HTML.

- Deployed machine learning models using APIs, Docker, and Kubernetes to create scalable and production-ready AI solutions, leveraging cloud platforms such as AWS Sage Maker and Google AI Platform for seamless deployment and management.
 - Utilized Java 8 features like Lambda Expressions, Parallel Streams, and functional interfaces.
 - Extensively worked in a Test-Driven Development (TDD) framework using JUnit and utilized JIRA for
 - Implemented functions to send and receive AMQP messages on RabbitMQ synchronously and asynchronously and sent JMS messages to Apache ActiveMQ on edge devices.
 - Worked on Angular directives, controllers, filters, services, templates, events, and injectors, and created custom Angular directives, filters, and services.
 - Configured local Maven repositories and multi-component Ant projects with Nexus repositories and scheduled projects in Jenkins for continuous integration/continuous deployment (CI/CD).
 - Used JIRA for defect tracking during the QA phase of projects.
 - Developed code modules using the Eclipse Integrated Development Environment (IDE).
 - Developed and maintained enterprise-level applications using the latest versions of Java, including Java 11 and Java 17.
 - Wrote unit tests using unit test and pytest, and used debugging tools to identify and resolve issues, ensuring high code quality and reliability using Python.
 - Implemented microservices architecture using Spring Boot, ensuring scalability and maintainability.
 - Developed RESTful APIs using Spring Boot, enabling seamless integration with front-end applications.
 - Utilized Spring Framework modules such as Spring Core, Spring AOP, Spring MVC, Spring Security, and Spring Batch to develop robust and secure applications.
 - Employed Spring Data JPA for database operations, leveraging the power of Hibernate ORM.
 - Configured Spring Cloud components for building distributed systems and microservices architecture.
 - Implemented transaction management and dependency injection using Spring Framework to enhance application performance and maintainability.
 - Utilized Spring Security to implement authentication and authorization mechanisms, ensuring secure access to application resources.
 - Developed custom Spring Boot starters to streamline the integration of common functionalities across multiple projects.
 - Leveraged Spring Boot Actuator for monitoring and managing production-ready applications.
- Environment:** Java 8.0, Spring 4, Hibernate 4.2, Spring batch, Spring Boot, Spring Security, JPA, JMS, HTML5, CSS3, Angular 12, Grails, DynamoDB, Cryptography, ML, Eclipse, Python, Oracle 10g, Flask, Django, Swagger UI, AWS, Docker, Gradle, Terraform, Log4j, EKS, Lambda, CloudWatch, JIRA, Pure XML, Web Services, Kafka, Microservices, REST UI, Apache Spark.

Lead Software Engineer

Cardinal Health, Columbus, OH

March 2018 to July 2021

Responsibilities:

- Designed and developed the application using Agile methodology, employing TDD, Scrum, and pair programming techniques.
- Authored technical design documents including class, sequence, and activity diagrams for each use case.
- Created dynamic, browser-compatible pages using jQuery, JavaScript, and AngularJS.
- Implemented J2EE design patterns such as Session Facade, Factory, DAO, and DTO.
- Worked with the AngularJS MVC framework, authoring complex directives, services, controllers, and filters.
- Customized AngularJS filters in various locations to achieve the desired output.
- Developed Angular Controllers to manage data for each view. Developed and deployed scalable applications on Oracle Cloud Infrastructure (OCI), leveraging its robust computing and storage solutions.
- Integrated various enterprise applications using Oracle Integration Cloud (OIC) to ensure seamless data flow and process automation.
- Developed HTML and JavaScript for client-side presentation and data validation within forms.
- Utilized AngularJS UI-bootstrap components like time picker, directives, modal pop-ups, ng-grid, router, progress bar, ng-Idle, and ng-Upload.
- Developed features in utility applications and verification monitoring tools to track application statistics using AngularJS, Node.js, and Bootstrap.
- Led the development of a comprehensive AngularJS-based framework for the company's internal tools,

utilizing AngularJS 1.x features such as two-way data binding, custom directives, and services.

- Designed and implemented a component-driven architecture using Angular, facilitating efficient code reuse and maintainability.
- Led the migration of legacy systems to Angular, enhancing the system's responsiveness and scalability.
- Integrated Angular applications with Oracle Cloud Infrastructure (OCI), optimizing cloud resources and ensuring robust performance.
- Expertise in data cleaning, transformation, and feature engineering to enhance model accuracy and performance.
- Migrated legacy Java-based modules to Kotlin, reducing code complexity and improving maintainability.
- Maintained and expanded AWS infrastructure using AWS Stack, focusing on database setup and maintenance on AWS EC2.
- Developed reusable helper and utility classes used across application modules.
- Implemented SOA architecture with web services using SOAP, WSDL, and XML.
- Wrote build and deployment scripts using ANT, Maven, shell scripts, and JACL on UNIX environments.
- Used Oracle Coherence in Java Collection API to access and modify data, and the JavaBean event model to receive data change notifications.
- Configured Gradle tasks and build pipelines using Groovy DSL, enhancing build efficiency and flexibility for Grails applications.
- Incorporated Groovy-based Gradle scripts into CI/CD pipelines to automate testing, building, and deployment processes using tools like Jenkins.
- Configured Spring Cloud components for building distributed systems and microservices architecture.
- Implemented transaction management and dependency injection using Spring Framework to enhance performance and maintainability.

Environment: J2EE/J2SE, Java 8.0, Java Script, Angular JS, Node.js, Spring Framework, Spring Batch, Hibernate, JDBC, JMS, Apache Axis 2.0, Kotlin, SpaCy, NLTK, MongoDB, AWS, IAM, Tomcat Web server, LDAP, WSDL, SOA, SOAP, XML, HTML, Log 4j, RAD 7, Oracle, SunOS (UNIX), Sub Version, Gradle, and Windows 7.

Senior Full Stack Developer

Vanguard, Pennsylvania

July 2015 to Feb 2018

Responsibilities:

- Involved in all stages of SDLC including system analysis, design, development and post-implementation activities.
- Implemented various J2EE design patterns like DAO pattern, Business Delegate, Value Object.
- Interacted with the business users to gather requirements and provided high-level design with Sequential and State-chart diagrams.
- Actively participated in SCRUM's and Sprints of Agile Methodology.
- Developed database persistence layer components for mapping an object-oriented domain model to the relational database using ORM framework using such as Spring JDBC Support.
- Design and development of the BPM for various synchronous and asynchronous processes and to implement the workflow of the applications.
- Created and maintained microservices serving various functions in the cloud-service layer as well as the web layer.
- Integrated DynamoDB with various AWS services such as Lambda, API Gateway, and Kinesis, creating seamless and scalable data pipelines
- Leveraged pandas, numpy, matplotlib, and seaborn libraries for efficient data manipulation, analysis, and visualization, facilitating informed, data-driven decision-making.
- Used Django's template engine to generate dynamic HTML and manage static files (CSS, JavaScript), ensuring a seamless front-end integration.
- Designed and implemented RESTful APIs using Flask and Flask-RESTful, enabling efficient communication between client and server applications.
- Setup a new clear case project and ANT scripts and owned the deploy process.
- Designed and Developed User Interactive (UI) Web pages using HTML5, Angular, Bootstrap, CSS, JSX, jQuery, AJAX and NodeJS.
- Integrated databases with Flask applications using Flask-SQLAlchemy, managing data models and performing CRUD operations seamlessly.

- Built Single page application (SOA) using Angular 8 as per the requirement.

- Used Spring Boot, which is radically faster in building Microservices and developed Spring based application with very less configuration.
- Performed client-side validations using JavaScript and Struts validation framework.
- Implemented MVC architecture using JSF framework using JSPs as GUI development and DB Modeling using NOSQL and Oracle 10g.
- Written Stored Procedures, functions, SQL queries and backend programming using Oracle, SQL.
- In-depth experience with Amazon AWS Cloud Services, (EC2, S3, EBS, ELB, Cloud Watch, Elastic Search, SNS, VPC, Cloud Formation, Route53) and managing security groups on AWS.
- Built workflow-based applications using JBPM workflow engine and designed workflow in JBPM editor, use provided api's in JBPM engine to run business functions.
- Written Unit Test Cases and Integration Test Cases using Junit framework.
- Developed business processes/workflow and rules using JBoss BPM/Rules.
- Developed Business components and Services using EJB3.0, JPA and JAX-WS and deployed them in Business tier application server.

Environment: Java 1.7, Core Java, J2EE JSP, Servlets, JDBC, Collections, Generics, JUnit, Angular 8, Struts, Spring, AWS, JBPM, Python, DynamoDB, Hibernate, Microservices, Fargate, Eclipse, Flask, Django, WebLogic Application Server 5.0, UML, SQL, Oracle 10g, Azure, Agile, Maven, SVN, ClearQuest.

Java/J2EE Developer

Client: Verizon, Texas

December 2013 to April 2015

Responsibilities:

- The application was developed in J2EE using an MVC-based architecture.
- Used Struts1.3 framework and various in-house custom tag libraries for the presentation layer.
- Integrated the application with Spring Framework for implementing Dependency Injection and provided abstraction between the presentation and persistence layers.
- Wrote prepared statements and called stored Procedures using callable statements in MySQL.
- Worked on NoSQL database like Mongo DB for storing security related information.
- Used Data Access Object (DAO) pattern to introduce an abstraction layer between the business logic tier and the persistent storage tier.
- Used Hibernate for Database Persistence to perform actions like insert, update, retrieve.
- Used Core Spring for dependency injections and Used JavaScript for client-side validations.
- Developed the business logic using EJB 3.0.
- Used Message Driven Bean (MDB) for supporting user subscriptions and notification features.
- Consumed a Web service for exchange rate calculation.
- Deployed applications on WebSphere Application server.
- Used Web services for transmission of large blocks of XML data over HTTP.
- Used Collections extensively to store, retrieve and manipulate objects in the business logic layer.
- Developed J2EE components on Eclipse IDE.
- Developed and debugged servlets and EJB with WebLogic Application server and developed EJB components to implement business logic using session and message bean.
- Created use cases, class diagrams, activity diagrams and collaboration diagrams.
- Created Dynamic Web Pages using JSP, CSS, and jQuery. Developing a dynamic menu using XSLT which will run on XMLs to transform to the required form.
- Involved in unit testing using JUnit, system testing, and creation of various test scripts.
- Wrote test cases that adhere to a Test-Driven Development (TDD) pattern.
- Worked on the project development to complete testing and send it to the production environment.
- Provided on-call support during the pre-production testing and also the project release.

Environment:

Java 5/J2SE, JSP, Spring, JAXB, XSLT, DOM, XML, EJB 3.0, Web Services, JNDI, J2EE, RSA, JBoss 6.0, Rational Rose, GIT, Oracle9i, Junit, IBatis, JavaScript, DHTML.

Education:

- Master's degree in computer science from Bits Pilani.
