## EDUCATION

### Purdue University

Computer and Information Science - Master of Science

May 2025

GPA: 3.6/4.0

## SKILL & OTHER

**Programming:** Java, Python, C++, C, C#(.NET), Relational Database(SQL, MYSQL, Oracle, Postgres), NOSQL,T-Sql

**Web Technologies:** HTML, CSS, Angular Js, React Js, Rest API, JavaScript, Typescript, PHP

**Tools:** Eclipse, Spring Tool Suite, Git, GitHub, Visual Studio Code, Cloud - AWS, Postman, MS Word

**Others:** Data Structures & Algorithms, Spring Boot, Operating Systems, Backend, OOPS, Design Patterns, MVC

## WORK EXPERIENCE

**Technovert, Hyderabad** | Software Engineer Intern | C#, ASP.NET , ADO.NET September 2021 - January 2022

**Cognizant , Hyderabad** | Software Engineer Intern | Java, SpringBoot , React January 2022 - August 2022

**Cognizant , Hyderabad** | Software Engineer | Java, SpringBoot , Angular August 2022 - July 2023

- Collaborated with QA teams to enhance test coverage, resolving reported issues and reducing bug resolution time.
- Developed and maintained the web applications using Spring Boot and Angular, ensuring efficient and scalable solutions.
- Optimized database performance by writing and refining efficient SQL queries, improving data retrieval times using indexing and overall system responsiveness.
- Crafted features using Spring Boot and Angular for a user-friendly and responsive design, validating REST web services with Postman, SOAP for precise data exchange and interoperability.
- Implemented Mockito and JUnit test frameworks to execute comprehensive unit tests, reducing critical software bugs and enhancing overall system resilience.
- Facilitated knowledge sharing and onboarding for new team members by documenting technical designs, implementation details, and user guides, improving onboarding efficiency.

## PROJECTS

### Cab Booking Application | Java, Distributed Systems, Kafka, Spring Security, Spring Data JPA

- The project uses Spring Boot and Kafka to store and continuously share real-time geolocation information between users and cab drivers, ensuring accurate and timely cab assignments forming customer groups.
- Integrated Spring Security to enhance the robustness of the web application, providing secure access and protecting user data throughout the process. Implemented JWT (JSON Web Token) for secure user authentication and authorization.
- REST APIs facilitate seamless communication between the server and the user, ensuring smooth interaction and efficient operation of the cab detection and assignment system.

### Toll Bill Generator | Java, Hibernate , Spring Boot, Angular JS

- Led the development of a web application that generates toll bills for user-selected cities, incorporating role-based access control with User, Admin, and Manager roles.
- Utilized Spring Boot, REST Web Services, and AngularJS within Docker environments to design and deploy the application, including an admin panel for efficient toll price management and approval workflows.
- Directed a cross-functional team to enhance functionality and performance, creating a user-friendly interface for generating accurate toll bills and improving internal operational efficiency.

### Bank Application | Java, Spring Data JPA, Spring Boot, React JS

- Developed application using Java Spring Boot and React.js, leading to a seamless user interface and increasing user satisfaction through intuitive design and streamlined functionality.
- Enacted user authentication via JSON Web Token, leveraging Restful API and Java Spring Boot for backend infrastructure, with React.js complementing on frontend interface.
