Experience

Software Engineer Fast Enterprises

Boca Raton, FL
July 2023 - Present

- Modernize child support software for state agencies by replacing legacy systems with websites built on the C#/ASP.NET platform and MVC architecture
- Collaborate with 40 developers to implement a debt collection system projected to serve 300,000 people, enabling the management of \$100 million in collections while ensuring compliance with federal regulations
- Automate and streamline the client demo-building process using C# scripting and an internal configuration manager, reducing manual staging time by 50%
- Develop in-house APIs with stored procedures to perform efficient CRUD operations interacting with Postgres/SQL databases
- Create dynamic, ADA-compliant web pages for customer eServices using a proprietary Bootstrap library and C# controllers, achieving a 90% approval rate from agency testers
- Support the ongoing product rollout for the Alaska state agency by collaborating with state developers, subject matter experts, and software architects to ensure timely delivery
- Mentor and guide up to three new team members at a time, helping them quickly grasp business processes, the codebase, and best coding practices for smooth integration into the team's workflow

Projects

FoodSafe

- Collaborated in a cross-functional Agile Scrum team of 5 to design and develop a web application that enables users to search for food products filtered by their specific allergies
- Built and refined the user interface using React, creating a seamless and responsive user experience
- Developed the back-end server using NodeJS, integrating MongoDB for user login and product data storage
- Utilized Node.js and Express to implement RESTful APIs for data management and retrieval
- Performed thorough unit testing using Mocha to ensure the application's functionality and reliability
- Worked in a CI/CD environment to streamline the development process and maintain a fully operational deployed product

Bathroom Finder

- Designed and developed the interface of the application using React and Material UI
- Utilized Geolocation API and Google Maps API to determine the user's location and search for bathrooms within a specified radius

Virtual Memory System

- Developed a memory subsystem simulation with main memory, L2 and L1 caches, and a controller to manage CPU and memory interactions

Education

New York University
Bachelor of Arts, *Computer Science*

May 2022
3.4/4.0

Skills

Technical: C#, Python, JavaScript, SQL, React, NodeJS, Postgre, Git, OOP, MVC, .NET, SSMS

Language: English, Mandarin (Fluent), Cantonese (Fluent)
