Education

Champaign, IL	University of Illinois at Urbana Champaign	Class of 2023
---------------	---	---------------

- B.S.E. in Computer Science

Experience

AI/ML Engineer	My Learning Tools	March 2024 - December 2024
----------------	-------------------	----------------------------

AIMEE IOS App

- Researched and evaluated cutting-edge AI/ML techniques, such as deep learning architectures and natural language processing models, to continuously improve the accuracy and effectiveness of the AIMEE app
- Developed and implemented AI/ML models for speech recognition and emotion detection within the AIMEE learning platform, enabling personalized feedback and adaptive learning experiences for users.

Software Engineer, Intern	Motorola Solutions	May 2022 - August 2022
---------------------------	--------------------	------------------------

ActiveEye Managed Security Platform Team

- Developed solutions to resolve API issues in the platform's backend using Python and JavaScript, resulting in 20% increased system efficiency and stability
- Designed and implemented a solution that reduced SSO login times by 30%, resulting in a more efficient and seamless user experience for developers

Technical Projects

Image Classifier for the Blind

- Developed an image classifier using TensorFlow SqueezeNet machine learning model on a Raspberry Pi to provide live video descriptions for visually impaired individuals, achieving 80.3% accuracy
- Integrated the model with Amazon Alexa voice control to enable real-time translation of live video into audio descriptions
- Awarded the Amazon Alexa Innovation Award and a \$4,000 university grant to further develop the project.

Stock Sentiment Analysis

- Developed a React web application that predicts future stock prices and informs investment strategies by analyzing the average sentiment of a specific stock using Linear Discriminant Analysis.
- Achieved an 80% prediction accuracy on a sample dataset and presented the project at HackIllinois, where it was recognized as a valuable financial tool.
- Utilized Python libraries including NumPy, Pandas, and Scikit-learn, as well as React, Node JS, and TensorFlow for web development and deployment.

Book Recommendation System

- Built a fully integrated book recommendation system using the K-Nearest-Neighbor algorithm, which provides personalized book suggestions based on users' previous reading experiences.
- Developed database application utilizing MongoDB and SQL for storing large amounts of book data, including user reviews and ratings.
- Used React, Django, Javascript, and Python to construct the web interface

Languages and Technologies

-
- Java, C++, Javascript, Python, C, Swift
 - SQL, MongoDB
 - React, Node JS, Django, Flask
 - Kubernetes, Amazon AWS, Microsoft Azure
