

Achi Yapo
BI Developer
Email: ayapo.dev@gmail.com
Ph. #: (470) 588-2763

PROFESIONAL SUMMARY

- Dynamic BI developer professional with over 7+ **years of experience** in designing, developing, and optimizing data solutions.
- Specialized in Data extraction, manipulation, and injection from and to several data platform such as Snowflake, Azure Data Factory, Dbt etc...
- Expert in SQL, Model building, Power Bi, Sisense, Automation and data manipulation using Python script, PowerShell.
- Proven track record of improving data processing efficiency and accuracy.
- In-depth knowledge in ER Modeling and Dimensional Modeling (Star and Snowflake Schema) building Dimension and Fact tables.
- Led the design and implementation of data warehousing solutions using Snowflake, enhancing data storage and scalability.
- Experience in working with Data Cleansing technique in ETL procedures.
- Experience in developing and maintaining real-time data processing applications and pipelines using Azure Data Factory.
- Excellent Communication, Analytical and Interpersonal Skills and ability to learn new concepts.
- Experience in administrative tasks in warehousing, including user management, cloning, and time travel features.
- Experience in assuring proper data governance.

TECHNICAL SKILLS:

Databases	MS SQL server , My SQL, SNOWFLAKE
Programming Languages	SQL, Python, R, PowerShell
BI Tools	Sisense, Power BI, Tableau
ETL Tools	ADF, SSIS , DBT
SQL Server Tools	SSMS, Query Analyzer, SQL server profiler, SQL Server Agent.
Other Tools	MS Office, MS Excel, MS Project, MS PowerPoint and MS Visio

WORK HISTORY

Client: Quadax Inc
Role: BI Developer IV
Responsibilities:

Oct 2020 – Present

- Designed and implemented standardized data management procedures around data staging, **data ingestion**, data preparation, data provisioning, and data destruction (scripts, programs, automation, etc.)
- Designed, developed, and maintained real-time processing applications and real-time data pipelines using **Azure Data Factory**
- Conducted advanced data analysis using **SQL** and **Python**, providing critical insights and recommendations for business process improvements. Retrieved and send out data with API calls.
- **Automated** task and process using **Python**, and **Batch Script** on Remote Server.
- **Collaborated** with cross-functional teams to identify data needs and deliver comprehensive data solutions tailored to specific business objectives.
- Reviewed **Snowflake data governance** documentation and ensure data pipelines and customer data warehouses **comply** with business rules. Maintained and **manage access** to data based upon business and security requirements (Role Based Access, masking and tagging)
- Developed and executed database queries, performed, and documented data analysis, data validation, data mapping, design, produce data samples, prototypes and produce **ad-hoc reports**.
- Obtained and analyzed data by accessing multiple sources and data warehouses.
- Demonstrated strong SQL skills to enable agile data analysis and data preparation for front end **BI implementation**.
- Maintained business intelligence models to design, develop and generate both standard, ad-hoc reports, and automated reports. Implements corrective actions to legacy issues.
- Working closely with multiple teams to design, develop and maintain SQL Stored procedures and python scripts to implement Business Intelligence Solutions.
- Designed, developed, and maintained interactive data visualizations and reports using Power BI.
- Create data models, define relationships, and optimize queries to ensure efficient and accurate report on Microsoft Power BI Desktop.
- Ability to support 24/7 on call in production and development environment.
- Provide training and support to end-users on using Power BI and interpreting reports and dashboards effectively.
- Developed and maintained complex **DAX formulas** to create calculated columns and measures.

Client: Overlay Analytics
Role: Snowflake BI Developer

Sep 2018 – Oct 2020

Responsibilities:

- Crafted complex SQL queries in Snowflake, specializing in financial data modeling including Account Payable (AP), AP Aging, Account Receivable (AR), and AR Aging reports.
- Demonstrated expertise in optimizing SQL queries for performance and accuracy, ensuring reliable financial data analysis and reporting. Served as a Snowflake Account Administrator, responsible for crucial administrative tasks including user and role-based security (RBS) management, ensuring robust data security and compliance.
- Experienced in using **SnowSQL** for advanced database management, streamlining database operations, maintenance and ETL.
- Oversaw the provisioning and management of Snowflake resources, ensuring optimal performance and cost efficiency.
- Designed and developed sophisticated data models in **dbt Cloud**, optimizing the performance and scalability of data processing workflows in Snowflake.
- Used advanced SQL and dbt functionalities to construct modular, reusable, and well-documented data models, aligning them with business requirements and data strategies.
- Managed and deployed data models in dbt Cloud, ensuring robust, scalable, and efficient data architecture within Snowflake environments.
- Leveraged version control capabilities to maintain a high standard of code quality and consistency across all data engineering tasks.
- Skilled in using the integrating dbt Cloud with version control systems, enabling efficient tracking, collaboration, and management of changes in data transformation projects.

Client: AAA, Phoenix, AZ

Jun 2017 – July 2018

Role: MSBI Developer

Responsibilities:

- Met with business users, gathered business requirements and prepared the documentation for requirement analysis.
- Provided training to the business users on how to use new data warehouse, browsing cubes from Excel and assisted them in rewriting their existing queries to point to the new warehouse.
- Created centralized data warehouse (**ODS**) and developed de-normalized structures based on the requirements and to improve the query performance for end users.
- Created **ETL design** specifications, performed unit testing, data validations, integration testing and UAT and deployed **SSIS packages** to development and test environments.
- Used Microsoft Power BI Power Query to extract data from external sources and modify data to certain format as required in Excel, and created SSIS packages to load excel sheets from PC to database.
- Created and Designed a Multi Dimensional Analysis (Configured OLAP Cubes, Dimensions, Measures, **MDX Queries**, Data mining, Data Source and Data Source Views and Star schema) using **SQL Server Analysis Services (SSAS)**.
- Used **data quality services (DQS)** to cleanse the data, remove duplicates and improve the quality. Created domains in DQS and exported the activity results into SQL tables.
- Did debugging using break points and data viewers and performance tuning of ETL data flows.
- Created various **SSIS packages** to populate the data from flat files, Excel and Access into ODS (SQL Server). Performed full loads for current data and incremental uploads for historical data (transaction based data).
- Created and configured **SSIS package configurations** using SQL server table and environment variables and loaded data from XML, Flat files and SQL Server incrementally.
- Designed and developed **STAR schema** and multidimensional (OLAP) objects. Created cubes and populated the data using **SSIS** packages.
- Configured **OLAP Cubes** (Star Schema) using **SQL Server Analysis Services** and Performance tuning MDX and dimensions design and scaling to large numbers of users.
- Created calculated columns, KPIs and custom hierarchies to accommodate business requirements and partitioned the cubes to improve the performance and to decrease the processing time.
- Worked with **T-SQL** to create tables, stored procedures and user defined functions for complex business logic.
- Created and maintained databases, tables, views, users, logins, indexes, check constraints, and business rules using **T-SQL**.
- Created multiple dashboards with calculations and KPIs using Power BI and deployed them in PBI service.

EDUCATION:

University of Texas at San Antonio - Master of Science in Data Science
Bachelor's in Finance/Information technology - University of Arkansas
Bachelor Computer Science - IUGB, Ivory Coast
