EXPERIENCE

Salesforce developer

JP Morgan Chase & Co

Aug 2022 - Current

NJ

- Worked on a major financial services project aimed at optimizing the company's client relationship management (CRM) system using Salesforce Financial Services Cloud (FSC), focusing on enhancing portfolio management and improving overall customer experience.
- Developed and customized reusable Lightning web components and Apex classes to build a scalable and efficient CRM platform. This enhanced key functionalities such as account management, data visualization, and process automation, improving team productivity.
- Implemented Salesforce best practices to design and deploy efficient solutions for client and financial data management, leading to streamlined workflows and system scalability for future growth.
- Led the deployment of Salesforce FSC for wealth management, customizing the platform to align with the financial industry's complex regulatory requirements. This resulted in a 25% improvement in client relationship management, especially for high-net-worth clients.
- Designed comprehensive Vlocity OmniScripts and Data Raptors to automate complex processes, reducing manual intervention and enhancing the accuracy of financial data processing.
- Integrated Sprout and other third-party applications with Salesforce, enabling seamless management of social media interactions and customer communications across various platforms, further enhancing the CRM experience.
- Migrated existing systems to Community Cloud, improving portal functionalities for both employees and clients. This migration allowed for smoother collaboration between internal teams and external customers.

- Enhanced data reporting and analytics using VBA to build customized reports and dashboards tailored to financial portfolios, helping managers make informed decisions based on real-time data insights.
- Optimized user engagement and system efficiency by implementing FlexCards and improving customer interaction through OmniStudio Interaction Consoles, resulting in more intuitive and responsive interfaces for end users.
- Managed user accounts, roles, and sharing rules across different departments, ensuring a secure environment and compliance with the company's data security standards.
- Utilized Data Loader to streamline data integration and transfer processes, ensuring the accuracy and efficiency of reporting systems while minimizing data entry errors and system downtime.

McKinsey & Company**

**Feb 2021 – Jul 2022
NJ**

- Managed and configured generic and specific components of the Salesforce application, including users, custom objects, page layouts, and approval processes, to optimize user experience and meet specific client needs, resulting in an enhanced and user-friendly CRM system.
- Implemented user-level security by managing roles and permission sets in Salesforce, ensuring the security of accounts and safeguarding personal customer information.
- Deployed and set up Salesforce as a SaaS solution, providing clients with a more efficient system for managing business relationships, while performing data migration from Siebel CRM to Salesforce and building a data dictionary to support the software integration process.
- Led QA testing by developing comprehensive test cases for new features and functionalities, ensuring defect-free production environments, and creating Test Classes for Triggers to maintain high test coverage.
- Developed and automated the quote creation process by integrating Apttus CPQ, minimizing time consumption and reducing the number of sales cycles, while utilizing VBA macros to streamline frequent operations.
- Integrated Sprout with Salesforce to effectively handle social media interactions, enhancing customer communication across different platforms and creating a holistic CRM strategy.
- Migrated systems to Community Cloud, enhancing portal functionality and enabling employee and customer collaboration while providing personalized access to Vlocity custom templates and Omniscript UI based on business requirements.
- Configured workflow rules to automate common processes such as tasks, email templates, record updates, and alerts, streamlining operations and implementing sales and marketing activities related to the lead management system.
