

Yeshwanth Basampally

682 374 7813

Full stack .Net Developer

Yeshwanth.b096@gmail.com

Professional Summary

- Over 4 years of extensive experience as a .NET Full Stack Developer in designing, developing, and maintaining web applications.
- Expertise in developing scalable, secure, and high-performance solutions using .NET Core and ASP.NET MVC.
- Proficient in building responsive and user-friendly interfaces with modern front-end technologies like Angular, React, and Bootstrap.
- Skilled in creating and consuming RESTful APIs for seamless integration between front-end and back-end systems.
- Experienced in leveraging cloud-native technologies, including Azure Functions, Logic Apps, and AWS Lambda, to develop cost-effective and scalable solutions.
- Proficient in managing end-to-end project lifecycles, from requirement gathering and technical design to deployment and post-implementation support, ensuring successful delivery within timelines.
- Hands-on experience with database design, optimization, and management using SQL Server and MongoDB.
- Adept at deploying cloud-based solutions using Microsoft Azure and AWS services.
- Strong understanding of DevOps practices, including CI/CD pipeline setup and automation with tools like Azure DevOps and Jenkins.
- Experienced in writing clean, maintainable, and testable code adhering to SOLID principles and design patterns.
- Well-versed in Agile methodologies, participating in sprints, stand-ups, and iterative development.
- Proficient in version control using Git and collaborating through tools like GitHub and Bitbucket.
- Expertise in microservices architecture, containerization with Docker, and orchestration with Kubernetes.
- Skilled in integrating third-party services such as payment gateways and notification systems.
- Successfully migrated legacy systems to modern .NET Core frameworks, enhancing system performance and scalability.
- Strong ability to analyze requirements, define project scope, and implement end-to-end solutions.
- Experience in cross-functional collaboration with designers, QA, and business stakeholders.
- Knowledge of authentication mechanisms like OAuth and JWT for secure application access.
- Proven track record of optimizing application performance and reducing load times through fine-tuning code and queries.
- Experience in test-driven development (TDD) and automation testing using NUnit and Selenium.
- Strong debugging and troubleshooting skills, ensuring timely resolution of production issues.
- Committed to continuous learning and staying updated with emerging trends in technology and development practices.
- Dedicated to delivering high-quality solutions that meet client needs and exceed expectations.
- Excellent verbal and written communication skills with the ability to translate technical concepts into business terms.
- Strong organizational and time-management skills, handling multiple tasks and priorities efficiently.
- Passionate about mentoring junior developers and fostering a collaborative team environment.

Technical Skills

Programming Languages: C#, .NET Core, ASP.NET MVC, JavaScript, TypeScript

Front-End Technologies: Angular, React, HTML5, CSS3, Bootstrap

Back-End Technologies: ASP.NET Web API, Entity Framework, LINQ

Databases: SQL Server, MySQL, MongoDB

Cloud Platforms: Microsoft Azure, AWS

Tools & Technologies: Visual Studio, Git, Docker, Kubernetes, Postman

Methodologies: Agile (Scrum), CI/CD, DevOps practices

Testing Tools: NUnit, Selenium

Professional Experience

Full Stack .Net Developer

GE Healthcare – South Jordan, Utah

Feb 2023 – Present

Responsibilities:

- Developed and maintained enterprise-grade web applications using .NET Core and Angular.
- Created RESTful APIs to support front-end applications and third-party integrations.
- Designed database schemas and optimized queries in SQL Server to enhance application performance.
- Implemented OAuth2.0 and JWT-based authentication for secure access control.
- Deployed microservices architecture using Docker and Kubernetes on Azure.
- Optimized front-end components for better user experience, reducing load times by 25%.
- Collaborated with cross-functional teams in Agile sprints to deliver features on time.
- Automated CI/CD pipelines using Azure DevOps for streamlined deployment processes.
- Conducted code reviews to ensure adherence to coding standards and best practices.
- Integrated payment gateways like Stripe and PayPal for seamless transaction processing.
- Migrated legacy applications to .NET Core, enhancing scalability and maintainability.
- Debugged and resolved production issues, minimizing downtime and ensuring smooth operations.
- Created unit and integration tests using NUnit to maintain high code quality.
- Conducted end-to-end performance testing using JMeter, identifying and resolving bottlenecks to enhance system efficiency.
- Implemented a dynamic role-based permission system that allowed granular access control at the module and feature level.
- Developed a chatbot using Azure Bot Framework integrated with Microsoft Teams for internal process automation.
- Automated data import workflows from external systems, improving data processing speed by 50%.
- Designed a custom reporting framework using Power BI embedded for advanced analytics and visualizations.
- Implemented role-based access control to restrict unauthorized actions within the application.
- Participated in requirement analysis sessions to understand and deliver client needs.
- Documented technical specifications and user guides for implemented features.
- Provided technical mentorship to junior developers, helping them grow in their roles.
- Coordinated with QA teams to ensure timely testing and bug fixes.
- Improved application security by addressing vulnerabilities identified during audits.

.Net Developer

Revature, (Remote)

May 2020 – July 2022

Responsibilities:

- Built interactive and responsive UI components using React and Bootstrap.
- Developed backend services with ASP.NET MVC and Entity Framework, following SOLID principles.
- Designed and implemented relational database structures in SQL Server.
- Designed and developed scalable web applications using .NET Core/ASP.NET for backend and Angular/React/Vue.js for frontend.
- Created and integrated RESTful APIs and microservices for seamless communication between distributed systems.
- Designed and optimized database schemas, stored procedures, and queries in SQL Server.
- Implemented CI/CD pipelines using tools like Azure DevOps, Jenkins, or GitHub Actions.
- Collaborated with cross-functional teams to gather requirements and ensure successful project delivery.
- Integrated APIs for third-party services, including social media logins and analytics tools.
- Automated deployment processes using Jenkins and Azure DevOps pipelines.
- Conducted performance tuning for slow-running queries, improving response times by 30%.
- Utilized Agile methodologies to deliver features and enhancements incrementally.
- Integrated notification systems using email and SMS APIs for user alerts.
- Wrote comprehensive test cases for unit and integration testing using Selenium.
- Assisted in the migration of on-premises applications to the Azure cloud platform.
- Implemented caching mechanisms to improve data retrieval speed and reduce server load.
- Conducted sprint planning, daily stand-ups, and retrospectives as part of the Scrum team.
- Led the development of a dashboard module that consolidated key performance metrics.
- Provided post-deployment support and resolved user-reported issues promptly.
- Created detailed documentation for APIs and application architecture.
- Trained and onboarded new team members on project-specific tools and workflows.
- Ensured cross-browser compatibility and responsive design for web applications.
- Supported production releases, performing sanity checks and monitoring logs.
- Collaborated with UI/UX designers to implement modern design standards.

Education

Masters in Information Systems from University of Texas at Arlington - Arlington, TX
