

Professional Summary:

- Having around 10+ years of experience in IT industry with emphasis on Software Analysis, Design, Development, Implementation, Deployment, Maintenance and Support of various Client/Server, enterprise, web and windows Applications.
- Working experience with software development life cycle (SDLC) methodologies like Agile and Waterfall methodologies.
- Expertise in Microsoft Dynamics 365, including customization, integration, and automation.
- Experience in Implementing Language-Integrated Query (LINQ) and retrieve data from different data sources (LINQ to Objects, LINQ to XML, and LINQ to SQL) and Entity Framework.
- Higher user experience at the time of high experience using React JS.
- Knowledge in creating SILVERLIGHT application using XAML and .NET Framework.
- Experience in developing WEB API RESTFUL Services.
- Experience on working with N tier architecture and SOA (Service oriented architecture).
- Good knowledge in implementing .Net Framework 3.0/ 3.5/ 4.0/4.5, windows and web-based applications using C#, ASP.NET, MVC, ADO.NET, LINQ, web services, Entity Framework, Silverlight on Visual studio '2005/'08/ '10/ '12/ '13.
- Developed and consumed Web services using WCF (Http, SOAP, and XML) and Web API (RESTFUL services).
- Hands on experience in Database Design, Development, Writing Constraints, Indexes, Views, Stored Procedures, Cursors, Triggers, and User Defined Functions using T-SQL.
- Experience in developing Windows Presentation Foundation (WPF) applications, having proficiency in Dependency Properties, Bindings, Styling, Templates and XAML as the code behind for User Interface.
- Development experience with JavaScript, Ajax, JSON and implementing client-side code in ASP.NET Web Applications and Windows Workflow Foundation (WWF).
- Involved in Designing and Writing Unit Tests and Integration tests using NUnit and Moq Framework, Spec flow as part of Test-Driven Development (TDD).
- Good Database programming skills in MS SQL Server /2008/2014, Oracle 10g/11g and MS access.
- Experience in languages like HTML4/5, CSS, XML, XSLT, JavaScript, JQuery, Ajax, Angular JS KnockoutJS, and JSON.
- Good experience in developing the applications using ASP.Net, MVC 2.0/3.0/ 4.0.
- Involved in Unit testing, Integration testing and Functional testing.
- Experience in working with the SSMS business intelligence solution tools like SSRS and SSIS.
- Working knowledge in configuration and version management using Visual Source Safe (VSS) and Team Foundation Server (TFS), GIT.
- Good in understanding the Business requirements and translating them into Detailed Design along with technical specifications.
- Expertise in third party UI components and JavaScript plug-ins like Bootstrap & Knockout
- Extensively used Knockout Observable Arrays, Bindings and client-side templates
- Experience in .NET security features such as Authentication (Windows-based Authentication, Forms-based Authentication) and Authorization (Authorizing Users and Roles).
- Good communication skills, Interpersonal skills, team management skills, team player, self-motivated and quick learner. Ability to handle team of develop

Education:

- Bachelors in Computer Science, Vignan's University 2014

Technical Skills:

Technologies

ASP.NET, ADO.NET, Win Forms, Web Services, LINQ, WCF and MVC 2.0/3.0/4.0 (ASPX/Razor View Engine), Knockout, Entity Framework4/ 5/6, WEB API, AJAX, Classic ASP, WPF, Microservices.

Programming Languages

C#.NET, Visual Basic, C, C++, T-SQL, PL/SQL,

Scripting Languages

VBScript, Java Script, J-Query, React JS, knockout JS, Node JS, VB, Angular8 /2.0/4/5/6/8/9.

Web Technologies

NET Framework 4.6/4.5/4.0/3.5/3.0/2.0, .Net Core 2/2.1/2.2, MVC3.0/4.0/5.0, ASP.NET 4.6/4.5/4.0/3.5/3.0/2.0, MVVM, Razor engine, Win Forms, SQLite, DTS Packages, DBMS, CSS, CSS3 HTML, HTML 5, JSON, Kendo UI, Bootstrap, XML, XAML, SOAP, REST, Web forms,

Databases
Version Control
Other tools
Reporting Tools
IDE and Tools

POWERSHELL, WSDL, Test Driven Development.
MS SQL Server 2008/2012/2014, SQL SERVER 2015/2014/2012/2008/2005/2000.
Team Foundation Server (TFS), Visual Source Safe (VSS), Tortoise Subversion (SVN), GIT
SQL Server Integration Services (SSIS), SQL Server Analysis Services (SSAS), Rapid SQL
Crystal Reports, SQL Server Reporting Services (SSRS).
Microsoft Visual Studio. Net 2019/2017/2015/2013/2012/2010, Microsoft Visual studio Code,
MS Office.

PROFESSIONAL EXPERIENCE:

Amex, NYC, NY

Dec 2022 - Present

Sr. Net Developer

Project Description: FraudShield is a .NET-based system I'm building to catch suspicious credit card transactions in real time. It uses machine learning to analyze spending patterns and flag potential fraud faster than traditional methods. The system processes high volumes of card transactions with precision to ensure accuracy. The goal is to protect Amex cardholders while keeping legit transactions smooth. I'm focusing on making it scalable and secure to handle millions of daily transactions

Responsibilities:

- Developed and maintained Angular 9+ applications using RxJS for state management and asynchronous operations.
- Implemented Kafka producer and Kafka consumer applications on Kafka cluster setup with the help of Zookeeper.
- Worked on partition of Kafka messages and setting up the replication factors in Kafka Cluster.
- Used OOPS Concepts and SOLID principles and implemented .NET classes and interfaces for business logic layer using C#.
- Designed and developed RESTful services using ASP.Net Core Web API to provide and consume services from different applications.
- Developed and customized solutions within Microsoft Dynamics 365, including entity customization, workflows, and business process automation.
- Created views for user interactions using objects of HTML Helper class, Custom Helpers, and JavaScript. Used MVC architecture for client-server interaction.
- Conducted functional testing on .NET applications, including positive and negative test cases.
- Developed dynamic web components for the application with C#, .NET Core, Angular 9, HTML5, SCSS, Bootstrap, TypeScript, and JavaScript for a rich and responsive user interface.
- Migrated legacy VB.NET applications to modern C# frameworks, improving maintainability and performance.
- Worked in developing application modules with TDD using MOQ.
- Involved in coding and designing using C#, XML, ADO.NET, WCF, JavaScript, React JS, Underscore JS, jQuery, HTML, and Cascading Style Sheets (CSS).
- Built dynamic dashboards with Angular 19's zoneless change detection and C# backend services, improving rendering performance by business analytics platform.
- Implemented WebRTC protocols and APIs in .NET applications.
- Enhanced Dynamics 365 user experience by customizing forms, dashboards, and views.
- Deployed and managed applications on Azure Kubernetes Service (AKS) using YAML scripts.
- Developed Azure Functions to improve data access, logging, and exception handling.
- Used third-party tools like AgGrid and Angular Material components with Angular 7 to develop user-friendly interfaces.
- Created Tables, Stored Procedures, and Views to Create/Insert/Update/Delete data into relational tables using SQL Developer.
- Developed multiple ESRI ArcMap add-ins and custom tools using .NET.
- Configured CI/CD pipelines and worked on source code management, build, release automation, and testing using Azure DevOps.
- Implemented Angular 16's advanced directive composition in a .NET-based CRM, enhancing code reusability and cutting UI development time by
- Implemented RESTful API integration in the AngularJS application and Bootstrap.
- Maintained visibility and transparency in the development cycle by leveraging Azure DevOps to track application progress.
- Developed and maintained microservices-based web applications using ASP.NET Core and React.js.

- Worked on Agile Methodology (Scrum) to meet timelines with quality deliverables by participating in Daily Scrum meetings, Sprint Planning, and Retrospective meetings.
- Managed Azure Kubernetes Service (AKS) policies, providing access to different Azure resources, and deploying and improving workflows that govern access.
- Created services using microservice architecture for better maintainability, agility, resiliency, and efficiency.
- Designed and developed Web Services using WCF to synchronize data from a remote application database to an online database using C#.NET, ASP.NET, and Visual Studio.NET.
- Identified, reported, and tracked software flaws utilizing issue-tracking platforms like JIRA.
- Extensively used SQL as the database and Entity Framework Core database-first approach for database connectivity.
- Implemented Form-Based Authentication and Role-Based Authorization to authenticate users using JWT (JSON Web Token).
- Developed applications and their integration across different systems and services using Azure PaaS services like App Services, Service Bus, Azure Storage Account (Queues/Blobs), Web Jobs, Functions, Azure AD, Azure API Management, Azure SQL, Application Insights, and SendGrid.
- Worked with Git Fork to maintain source code in a Git repository.
- Prepared formal project documentation, including specifications, requirements summaries, logical system design documents, state diagrams, and test scripts.
- Used Azure Functions, including function triggers and Dependency Injection, along with Azure SQL, Azure Storage, and Azure Services.
- Conducted and led user acceptance review sessions and collaborated with team members to perform unit testing.
- Coordinated the build/migration of releases to test and production environments.
- Responsible for designing and developing reports using SQL Server Reporting Services (SSRS).

Environment: C#, ASP.Net, ADO.Net, Visual Studio 2010, MVC, Azure, Jenkins, Silver light, WCF, WPF, SSRS, SQL Server, CSS3, AJAX, HTML5, Java Script JQuery, AngularJS, Web Services, LINQ, LINQ to SQL, LINQ to XML, IIS and NUnit testing.

Meijer, Grand Rapids, MI
.Net Developer

Mar 2021 – Nov 2022

Project Description: InventorySync is a .NET-based system built to keep Meijer's stock levels accurate across all stores and warehouses. It pulls real-time data from sales, deliveries, and returns to prevent overstock or shortages. The app integrates with existing supply chain tools, making it easier for teams to manage inventory on the go. It's designed to cut down errors and save time for store staff.

Responsibilities:

- Worked on developing a service using ASP.NET Web API, C# and used it to send Asynchronous API requests and responses to multiple Car Companies which can handle multiple tasks.
- Designed and implemented Dynamics 365 integrations with third-party applications using REST APIs and Azure Logic Apps.
- Worked with business to design the project by understanding the complete requirement.
- Used Jira Tool as a medium to work on project step by step with creating tickets for each step.
- Developed core functionality with the ASP.NET MVC Framework.
- Developed and deployed enterprise-level applications using .NET Core and React.js.
- Migrated an existing AngularJS application to Angular 9, improving performance.
- Developed VB.NET applications for internal use, reducing manual effort and improving accuracy.
- Worked on XML Data structures and schemas and Exporting and importing XML data by Serialization/De-Serialization of XML.
- Refactored a legacy .NET app's frontend with Angular 15's standalone APIs, eliminating NgModules and simplifying integration with RESTful APIs, saving 15% on dev time.
- Worked on Rest/Soap Web Services.
- Prototyped new features and ideas - Google Drive Drawing, Photoshop, HTML, XML, Sass, and React.js
- Worked closely with the UI designers in developing the User Interface using HTML, CSS, JavaScript, and JQuery.
- Used Object Oriented Programming (OOP's) concepts and Agile Methodology (SCRUM) in developing the project.
- Worked on setting up Build and Release definitions and releasing the code to various servers in Azure DevOps.
- Worked on SSIS Packages to get the daily data feed from various vendors and to send the outbound data to vendors.

- Worked on Database backups, restores, writing stored procedures, views and triggers.
- Created reusable UI components with Angular 15's typed reactive forms, integrated with Entity Framework Core, to ensure type-safe data handling in a financial reporting tool.
- Worked on Azure Data Factory to setup SSIS runtime and created multiple pipelines and triggers to perform various tasks like executing stored procedures.
- Worked with Azure Services (Functions, Logic Apps, Service Bus) to enhance the Dynamics 365 ecosystem.
- Used TFS for Source Code Control, project related document sharing and team collaboration.
- Worked on error logging using ELMAH.
- Code walks through and Code reviews.
- Participated in various meetings with the team and the Project manager to discuss improvements/amendments in the development of the section.
- Used ASP.NET Self-host for hosting the application.
- Deploying the code and maintain and perform changes to the project as per the requirement.

Environment: .NET 4.6, ASP.NET, ASP.NET Core2.0, Azure Web Jobs, SSIS, SSRS, C#, Entity Framework, Web API, Visual Studio 2018, AJAX, LINQ to SQL, SQL Server 2018, Azure Dev-Ops, TFS 2018/2019, Azure Data Factory, Angular, Bootstrap, jQuery, JavaScript.

Truist Financial, Charlotte, NC

Jun 2018 – Feb 2021

Full Stack Developer

Project Description: Built a secure .NET API to connect Truist's banking platform with third-party payment gateways, enabling smooth ACH and wire transfer processing. Focused on ensuring transactions were fast and reliable for customers. Integrated encryption and PCI-DSS compliance to keep data safe. Collaborated with the team to test and roll it out across web and mobile apps.

Responsibilities:

- Designing the project based on the .Net Framework architecture. UI design based on HTML5, CSS3, ASP.Net MVC5, JavaScript, jQuery, Bootstrap, Angular JS.
- Worked in Agile Scrum methodology and delivered accepted functionality in each sprint.
- Played key role in feature implementation and enhancement, code refactoring and defect fixing.
- Designed and developed Hybrid-Single Page Application using C# 5.0, .NET Framework 4.5, ASP.NET MVC 5, and AngularJS 1.5.
- Responsible for writing SQL Queries and Stored Procedures and Developed and consumed Restful Services using WEB API. Setting up Connection Strings and connecting SQL Server AZURE Databases from locally Installed SQL Server Management Studio (SSMS) for Developers. Designed Frontend within object-oriented JavaScript Framework like Angular.js and Node.js.
- Created test plans, executed test cases on various features in including flex net licensing, docker plugins to create volumes and for Source Code Control Used Team Foundation Server (TFS).
- Used React JS in development of the web application to bind the data/model that is being retrieved from a database through services provided in a controller to the view using scope.
- Created Tests in Angular JS using Jasmine with cutting edge UI development using various tools such as Telerik and Bootstrap. Involved in debugging and troubleshooting User interface screens and responsible for developing and consuming Windows Communication Foundation (WCF).
- Implemented Data Access Layer using Entity Framework and LINQ and extensive use of WebServices, SOAP, XML, XSL to expose the reports to facilitate information sharing.
- Designed interactive ASP.NETMVC views using Query, HTML, CSS, Angular JS, React Js, Bootstrap and AJAX to provide excellent user experience.
- Worked on Agile Platform using Team Foundation Server. Implemented O Data on ASP.NET Web API for convenient querying and changing data. Exposing the Asp.Net by creating WCF Services over SOAP/HTTP.
- Responsible for understanding the user requirements and implementing the business rules using C#.
- Worked on SOAP and RESTFUL Service API using WCF 4.0 which return XML and JSON data using WCF attributes.
- UI design based on HTML5, CSS3, ASP.Net MVC5, JavaScript, jQuery, Bootstrap, Angular 8. Created Tests in Angular 8 using Jasmine. Cutting edge UI development using various tools such as Telerik and Bootstrap and involved in debugging and troubleshooting User interface screens.

- Responsible for developing and consuming Windows Communication Foundation (WCF). Implemented Data Access Layer using Entity Framework and LINQ and extensive use of Web Services, SOAP, XML, XSL to expose the reports to facilitate information sharing.
- Deployed and Maintained windows applications on Azure cloud technologies.
- Provided database connectivity using Microsoft's ADO.NET. Azure Key Vault, Encryption and Security
- Involved in pre-testing the application and bug fixing. Design and implementation Integration of server-side services with REST web services. Developed import package to import data from Excel, CSV files into SQL server using SSIS.
- Strong background in RDBMS using Oracle, Teradata, SQL Server and their utilities. Extensive knowledge of SQL, PL/SQL functions, procedures and packages. Expertise in extracting data from relational and multidimensional databases
- Consumed SOAP APIs from enterprise customer system and RESTful APIs provided by other applications in the portfolio, also created W&C RESTful APIs.
- Participated in UI design with Master Pages in MVC 5 and improved layout with HTML5, Bootstrap, and CSS3.
- Used AngularJS, JavaScript to develop templates, controllers, and directives.
- Used RequireJS JavaScript library to dynamically load ASP.NET bundles.
- Used Math.net library to implement methods and algorithms for numerical computations.
- Provided database connectivity using Entity Framework 6.0, LINQ, designed stored procedures and views at the back end.
- Contributed in data migration from Oracle DB to SQL Server using PL/SQL and T/SQL.
- Generated data migration and transformation using SSIS, and built reports with SSRS.
- Used JSON web token to do user authentication and secure information exchange.
- Using the Ninject for Dependency Injection to build a loosely coupled system.
- Used Dapper for Object relational mapping (ORM).
- Used Repository and Factory design pattern to develop reusable code.
- Heavily involved in code review, build and deployment with GIT, Jenkins.

Environment: .NET Framework 4.5, Visual Studio 2015, C# 5.0, ASP.NET 4.5, MVC 5.0, Entity Framework 6.0, Azure, Web API 2, SQL Server 2014, HTML5, CSS3, JavaScript, AngularJS 1.5, AJAX, IIS 7, LINQ, SSIS, SSRS, Git, Agile, Jenkins, NUnit.

Cyient (British Gas), Hyderabad, India

Oct 2016 - May 2018

Full Stack Developer

Project Description: The Energy Supply Chain Optimizer is a .NET system I built to streamline British Gas's energy procurement and distribution. It pulls real-time data to balance supply with demand, cutting costs and reducing waste. The tool helps ensure reliable energy delivery while supporting net-zero goals.

Responsibilities:

- Designed Business Logic Layer, Data Access Layer using C# and MVC-5 as per the Project Specifications and implemented 3-Tier Architecture.
- Developed Service layer using .Net Core Web API. Written Methods that return JSON/XML response to the call back method.
- Involved in developing front end technologies using HTML5, and CSS3, JavaScript, and Kendo UI styles for desktop applications. Involved In testing using Client-side code using Swagger UI & SOAP UI.
- Developed and Consumed Dynamic CRM 365OOB API, HOGAN Services and expose our Services accordingly.
- Invoked Dynamics CRM API's & Dynamics CRM out Of the Box (OOB) API's for development.
- Used Angular 2 to connect the web application to back-end APIs, used RESTFUL methods to interact with several API's, and wrote custom directives for a responsive, CSS-animated user interface. Involved in System Analysis, requirement gathering, specification/documenting, designing, coding, testing, debugging, application evaluation and implementation.
- Designed and developed N- tier architecture that includes presentation, Business and Data Access Layer using C#, ASP.Net MVC and SQL server 2012. Developed and consumed Rest API's using .Net Core Web API's with C#.
- Developed razor pages in ASP.NET 4.5 web applications which are in MVC 4 architecture using C# as code behind and back end in SQL Server 2012.
- Responsible for testing, fixing the bugs and troubleshooting the technical problems.
- Worked on REST Service API using WCF which return JSON data using WCF attributes.
- Implemented XML Web Services using C#.NET.
- Developed React JS/ NET web application using JavaScript, ASP.NET MVC 5, C#, Visual Studio.
- Added performance measurements for Oracle, Web Logic, IIS in Load Runner Test Center.
- Interacted with MS SQL Server 2014. Enhanced existing stored procedures according to the business requirements

- Consumed and exposed that generated O-Auth 2 Tokens and consumed Rest services.
- Automation using Power Shell for Active Directory. Generated Proxy Classes by using VS 2017 Command Prompt
- Maintained .NET Core applications (enhancements, bug fixes, testing)
- Working with Jenkins to integrate the source code for testing. Working with SonarQube for code coverage and Bug Fix. Involved in smoke test to bug fix/performance.
- Worked on third party API's to get data into the application.
- Worked on routing to load controller type using MVC 5.0 Web APIs for reaching appropriate action in the web application.
- Utilized HTML helper in Views to reduce the code thereby reducing the tedious typing of html tags.
- Built an ASP.NET application authentication using .NET Framework, Model View Controller MVC and IIS security model.
- Used Re-Sharper to maintain business standards.
- Used TFS to Check in, commit and maintain code versions on the server.
- Experienced in creating test plans and performing X-Unit testing using Auto Fixture and Auto Moq.
- Performed unit testing on every new version before sending it for Integration Test IT, UAT & Prod.
- Create Build definition with TFS MS build task. Worked in migrating TFS to Git Lab Migration.
- Worked on MVC & Web API test Project to create automated test for simple test cases and for input validation.
- Creating App Pools and deployment to respective Servers.
- Working with Jira Board, for issue management, project related document sharing and team collaboration.
- Working with Team Foundation Source Control TFS 2013 as the source for version control.
- Maintenance and Production support of Legacy apps to ensure smooth functioning of the applications.
- Created database tables, stored procedures, views and functions in SQL Server-2014.
- Created SSIS packages to import candidates to the CSV file and also to import to the staging database
- Developed complex MVC 5 Controller, Views, Models and Helper methods linked to Web Api.

Environment: MS visual studio 2015, .NET Framework 4.5.2, IIS 7, C#.net, SQL Server 2014, stored procedures, views, SSIS, MVC 5.0, MVC Action filters, HTML 5.0, CSS, JSON, Web Services, RESTFUL Services, X-Unit.

Cyient (United Utilities), Hyderabad, India
Full Stack Developer

Mar 2015 – Sep 2016

Project Description: The Wastewater Compliance Tracker is a .NET application I built to monitor treatment processes at United Utilities, ensuring they meet environmental regulations. It pulls real time data from plant sensors and flags any issues for quick resolution. The system also generates reports to keep our team aligned with compliance standards.

Responsibilities:

- Involved in gathering the requirements and defined the business rules to user requirements in SDLC and also analysis of the system based on MVC-5 architecture.
- Collected the contract, deal summary and agreement documents to go over the details required for the project and created the Detailed Design documents mentioning all the business requirements.
- Involved in the design and analysis of the project.
- Developed multi-tiered ASP.NET web applications using C#, HTML-5, CSS.
- Developed Restful Web Application using ASP.NET MVC 5 API.
- Developed Web Application using .Net 4.5 Framework, MVC 5 Framework, HTML 5.0, C# ASP.NET, JQuery, JavaScript, AJAX, XML and Visual Studio.Net 2013.
- Worked on Dynamics CRM API's & Dynamics CRM out Of the Box (OOB) API's development.
- Interacted with MS SQL Server 2014. Enhanced existing stored procedures according to the business requirements.
- Consumed and exposed Dynamics CRM APIs Wrappers for custom API development
- Migration of data from Excel source to CRM, MS SQL Server using SSIS.
- Worked on Kingsway Software to connect with Dynamics 365.
- Worked on Integration/Sync b/w MS Dynamics CRM & MS outlook Cloud.
- Consumed and exposed MSGraph API, also generated OAuth 2 Tokens and consumed Rest services.
- Generated Proxy Classes by using VS 2015 Command Prompt & Dynamics CRM Service Util.
- Worked on Integration/Sync b/w MS Dynamics CRM & MS outlook Cloud.
- IBM Lotus Notes/Outlook Domino Server and client - email and messaging implementation.
- Performed unit testing on every new version before sending it for Integration Test (IT) & User Acceptance Test (UAT). Create Build definition with TFS MS build task

- Working with Team Foundation Source Control TFS 2013 as the source for version control and project / issue management, project related document sharing and team collaboration.
- Responsible for testing, fixing the bugs and troubleshooting the technical problems.
- Developed Views using HTML5 with Razor, JQuery, Ajax, knockout observables, data bindings, Bootstrap Interactive CSS and Plug-ins.
- Worked on building the Production, Development, Test, and Stage Servers for Application Deployment.
- Extensively used LINQ to communicate with the database and also for querying, retrieving and manipulating data.
- Involved in Unit testing and N-Unit testing.
- Written detailed Technical Documentation and also Deployment Documentation for the maintenance team and prepared an easy to understand user's guide.
- Wrote Unit test cases using Visual Studio Test Tools.

Environment: MS visual studio 2013, .NET Framework 4.5, IIS 7, C#.net, SQL Server 2014, MVC 5.0, HTML 5.0, CSS, KnockoutJS, Angular JS, Windows Communication Foundation (WCF), XML, SOAP UI, Web Services, Java Script, JQuery, AJAX, RESTFUL Services.

Rysun Labs Inc, Hyderabad, India

Oct 2014 – Feb 2015

Python Developer

Project Description: Worked on Python projects at Rysun Labs, building tools for e-commerce and data analysis. Teamed up with others to create reliable software for big clients.

Responsibilities:

- Designed robust Python scripts to automate data extraction, transformation, and loading (ETL) processes, significantly reducing manual intervention and processing time.
- Developed RESTful APIs using Flask and FastAPI for internal microservices, ensuring secure data access and smooth integration with frontend and third-party applications.
- Wrote efficient and reusable code modules to handle complex business logic, with a strong focus on readability, performance, and unit testing using PyTest.
- Worked with cross-functional teams including data engineers, DevOps, and QA to deliver end-to-end solutions, from initial requirement gathering to deployment.
- Optimized SQL queries and Python data pipelines for large datasets using Pandas and SQLAlchemy, improving overall data processing speed.
- Set up CI/CD pipelines using Jenkins and GitHub Actions for automated testing and deployment of Python applications to AWS Lambda and EC2 environments.
