Senior Azure .NET PaaS Developer / Lead .Net Full stack Developer

PROFESSIONAL SUMMARY:

- Around 9+ years of experience as Software Engineer, specializing in development and support of Cloud - based and Web applications using **Microsoft Azure, .NET Core, ASP.NET MVC, C#, .Net Core, ADO .NET ,XML, Restful APIs, Power BI, React, ETL, JavaScript, Angular, Webservices , DevOps, AI/ML, Mongo DB, Cosmos DB, Bootstrap, TypeScript, LINQ, and Microsoft SQL Server.**
- Experience in the complete Software development life cycle (SDLC) of successfully launched applications, including **Agile methodologies, CI/CD, and DevOps** practices.
- Built and maintained efficient, reusable, and reliable code via Microsoft .NET Technologies **including C#, ASP.NET core, MVC, Angular, React, Bootstrap, Typescript and JavaScript.**
- Designed, implemented, and monitored web pages and sites for continuous improvement.
- Worked on enhancements of older portals and managed Hotfixes.
- Led the design and development of scalable **Azure-based microservices** using **C# .NET, Azure Functions, and Kubernetes.**
- Architected **high-volume distributed systems** handling over **1M+ daily transactions** with optimized **event-driven design.**
- Guided teams in adopting **Domain-Driven Design (DDD), CQRS, and event sourcing** for improved system reliability.
- Developed and maintained web applications using **ASP.NET, C# and MVC** architecture.
- Designed and implemented **RESTful APIs** using **OData (v3, v4)** for seamless data integration.
- Built and optimized server-side logic using .NET Core (6 or later) for high-performance applications. Integrated Azure **APIM** with various **Azure services** such as **Azure Functions, Logic Apps, and Event Grid** for seamless automation and workflows.
- Implemented **NoSQL solutions using MongoDB**, ensuring efficient document-based data storage.
- Developed, configure, and manage Web APIs using Azure API Management (**APIM**).
- Followed **SOLID** principles and **OOPS** best practices to write modular, reusable, and scalable code.
- Strong experience in **.NET Core and MVC Framework** for developing scalable and secure web applications.
- Proficient in designing and consuming **RESTful APIs** with authentication and authorization best practices.
- Ability to analyse existing systems, perform **system reengineering**, and optimize application performance.
- Skilled in **database performance optimization**, including query tuning, indexing, and partitioning.
- Worked on web-based N-Tier application developed using **MSSQL Server** and Data Services. Data Access Layer as Business Service Tier and **ASP.NET CORE MVC** as Presentation Tier.
- Worked with **Entity Framework, LINQ**, and stored procedures for efficient database interactions.
- Implement event-driven architectures using **Service Bus, MQ, Kafka**, or similar messaging frameworks.
- **Led projects** with moderate complexity, providing **technical guidance** and **mentoring junior team members.**
- Designed, developed, and maintained **RESTful APIs** and **micro services** for seamless integration with enterprise applications.

- Leveraged **Azure AI/ML services (Cognitive Services, Azure OpenAI, and Bot Framework)** to enhance decision-making, automate workflows, and improve customer engagement.
- **Configured security policies** such as **OAuth, JWT, API Key authentication**, and role-based access control (**RBAC**) for securing APIs.
- **Monitored API performance and analytics** using **Azure Monitor and Application Insights**, optimizing response times and usage efficiency.
- Gained experience with **Copilot** and Large Language Models (**LLM**) to enhance development efficiency and automation.
- Worked on **migration** of various applications from .Net framework to .Net core.
- Participated in all Scrum activities including **sprint planning, implementing user stories, and sprint retrospectives**.

TECHNICAL SKILLS:

Programming Languages	.NET Core, C, C#, ASP.NET MVC, ADO .NET, TypeScript ,Python, JavaScript
Cloud & DevOps	Microsoft Azure (PaaS, IaaS, Serverless) , Azure Functions, APIM, App Configuration, Azure Blob Storage, Azure SQL Database, Terraform, Azure VM, Docker, Kubernetes (AKS), Ansible, Azure Service Bus, Event Hub, Event Grid, Redis Cache , APIM, Azure Key Vault, Terraform, Bicep, ARM Templates, Azure AD Authentication
Cloud Technologies	Azure, AWS, GCP
Frontend Technologies	Angular(15-16, 17+) ,React, JavaScript, TypeScript, RxJS, NgRx, HTML5, CSS3, Bootstrap, Angular Material
Reporting	Microsoft Power BI, SSRS, Tableau
Security & Authentication	OAuth 2.0, JWT, API Key, RBAC, Managed Identity, Azure AD, ADFS, MSAL, OWASP Security Best Practices
AI & Automation	GitHub Copilot, Large Language Models (LLM), AI/ML, ChatGPT API, OpenAI
Caching & Messaging	Redis, MemoryCache, Kafka, RabbitMQ, Azure Service Bus, Kafka
Microservices , Event-Driven & Streaming Architectures	Microservices Architecture , Domain-Driven Design (DDD), CQRS , Event-Driven Architecture (Kafka, Azure Event Hub) , RESTful APIs, GraphQL , API Gateway (Azure API Management) , Apache Kafka, Azure Event Hubs, Kafka Connect & Schema Registry, Azure Service Bus & Event Grid
Databases	MS SQL, PL SQL, Oracle, Azure SQL, LINQ, Cosmos DB, MongoDB, Stored Procedures, Indexing, Performance Tuning
Monitoring & Analytics	Azure Monitor, Application Insights, Log Analytics
Web Technologies & Frameworks	MVC, Restful API, JSON, HTML, CSS, CSS3, XML, Angular, LINQ, Graph QL, TypeScript, WCF, SOAP, Web API, React JS, Kendo UI, Bootstrap, MQ Kafka, EF Core, JavaScript, jQuery, Entity Framework
IDE & Tools	Visual Studio (2022, 2019, 2017, 2015, 2005), SQL Server Management Studio (SSMS), Visual Studio Tools for Office (VSTO), Power BI Desktop, EF Core, Jupiter Notebook, Azure Monitor, Azure DevOps, Postman, Swagger, SonarQube, Angular CLI & Webpack, TSLint
Version Control	Git, Team Foundation Server (TFS), GitHub, Bitbucket, Jenkins, GitHub Actions

Agile, Testing & Ticketing Tools	Agile (Scrum, Kanban) , Microsoft Test Manager, ServiceNow, N-Unit, X-Unit, MS Test, Performance Testing , Selenium ,Devops, Scrum, Service now, Jira, Kanban, Code Reviews, Pair Programming, Unit Testing: Jasmine, Karma, Jest, E2E Testing: Protractor, Cypress, Angular TestBed & HttpTestingController
---	--

CERTIFICATIONS

- Microsoft Certified: **DevOps Engineer Expert (AZ-400)**
- Microsoft Certified: Azure Developer Associate **(AZ-204)**
- Microsoft Certified: Azure Fundamentals **(AZ - 900)**
- Database Fundamentals (MTA 98-364) By Microsoft

PROFESSIONAL EXPERIENCE

Intigrow, USA

Senior .NET Azure Developer

Jan 2025 - Till Date

Description: Intigrow is a technology consulting and services firm that specializes in delivering cloud-based solutions, digital transformations, and IT services across various industries. It focuses on helping businesses leverage cloud technologies like Microsoft Azure to modernize their infrastructure, improve operational efficiency, and accelerate digital innovation.

Responsibilities:

- Led the design, development, and deployment of medical device software solutions using Microsoft technologies, including **.NET Core, C#, REST APIs**, and **Azure** cloud services, ensuring compliance with industry standards.
- Developed responsive and dynamic UI components using **AngularJS and Kendo UI**, enhancing user experience.
- Implemented secure **API integrations** to facilitate seamless communication applications.
- Developed **React-based dashboards** and data visualization tools for real-time application insights, leveraging **Power BI** and D3.js for enhanced analytics.
- Developed automated workflows using **Azure Logic Apps** to optimize processes like appointment scheduling and billing.
- Created and optimized React components to improve front-end performance, **reducing API** calls and enhancing the user experience.
- Integrated **Azure Cognitive Services (Text Analytics, Speech, and Vision APIs)** to enhance automation and customer engagement.
- Developed AI-driven **chatbots and virtual assistants** using **Azure Bot Service** for appointment scheduling and customer support.
- Created custom dashboards, reports, and workflows in JIRA for better project tracking.
- Integrated **Azure Service Bus and Event Grid** for real-time notifications and event-driven processing.
- Ensured data security and compliance with industry regulations, applying encryption, authentication, and role-based access control.
- Developed **reusable and modular components** with **Angular Material** and Bootstrap, improving UI consistency.
- Integrated **Jest** for fast unit testing with improved debugging and test isolation.
- Improved database efficiency using **Azure SQL Database and Cosmos DB**, ensuring high availability and quick response times.
- Developed custom React Hooks and higher-order components (HOCs) to standardize logic and improve code reusability.

- Designed **Cosmos DB data models** with partitioning strategies to optimize read and write performance for large data.
 - Led **CI/CD pipeline automation** with Azure DevOps, ensuring smooth deployment and monitoring of application performance.
 - Collaborated with clients, administrators, and DevOps teams to enhance system usability and performance.
- ENVIRONMENT:** Azure (App Services, Functions, Service Bus, SQL Database, Cosmos DB), .NET Core, C#, REST API, Angular, React, Power BI

Projects : Smart DCC , Siemens (USA)

Accenture

Sep 2022 - Jan2025

Senior Azure .Net Developer with DevOps/ Lead Azure .Net Developer

Description: Smart DCC is a Telecom Services Project which involves device communication and maintenance of data collective devices such as smart meters. Our solution is scalable and can support asynchronous communication over millions of devices.

Responsibilities:

- Worked on the development of various **Web API's** using .Net Core WEB API for client applications to perform device management activities.
- Implemented **Azure Functions with all trigger types (Service bus, Timer, HTTP, Event-based, and Queue Storage)** for message processing and data integration.
- Designed and integrated applications with **Azure App Configuration** for centralized configuration management.
- Developed **Single Page Applications (SPAs)** using **Angular and TypeScript**, improving UI responsiveness.
- Worked **with Azure Service Bus, Event Hubs, APIM, Virtual Machines, Logic Apps, App Services**, and Azure Storage for secure and scalable cloud solutions.
- Mentored and led **cross-functional Agile teams of 10+ engineers**, conducting **code reviews, design reviews, and knowledge-sharing sessions**.
- Established **best coding practices (SOLID, DRY, Clean Code, TDD)**, resulting in a **40% reduction in production defects**.
- Led **Scrum ceremonies**, backlog grooming, and sprint planning, ensuring **on-time feature delivery**.
- **Migrated legacy .NET framework-based applications to .NET Core** for enhanced performance and cloud compatibility.
- Automated and optimized **CI/CD pipelines using Azure DevOps** for seamless deployments.
- Developed logging and monitoring solutions using **Azure Monitor and Application Insights** for proactive issue detection.
- Utilize **Azure Key Vault** for managing secrets, keys, and certificates securely.
- Implement Azure Storage solutions for data storage and retrieval.
- Implemented Role-Based Access Control (RBAC) and **Azure AD authentication** to ensure security compliance.
- Wrote **unit tests** for **Angular components**, services, and directives using **Jasmine and Karma**, achieving **90%+ code coverage**.
- Implemented and optimized **PL/SQL queries** to handle large-scale transactional processing.
- Developed and maintained **.NET Core applications** using MVC, Entity Framework, and LINQ.
- Integrated and optimized **SOA-based services** for efficient communication across applications.
- Conducted **code reviews, performance analysis, and troubleshooting** to ensure application efficiency.
- Designed and implemented scalable **micro services-based solutions** for efficient cloud application management.
- Developed **Durable Functions** Orchestrations to handle long-running workflows and complex stateful processing efficiently.

- Implemented **OAuth 2.0 and OpenID Connect (OIDC)** for secure user authentication and authorization in a .NET application, enhancing security and user experience.
- Implemented **dependency Injection (DI)** through constructor with built-in IoC container to manage and inject dependencies seamlessly.
- Develop and maintain **Web API, REST services**, WCF, or SOAP based services.
- Ensure API security, scalability, and performance optimization.
- Work with **JSON, XML**, and other data formats for API communication.
- Worked with Entity Framework and **LINQ** to interact with databases.
- Ensured high availability and disaster recovery strategies by leveraging Azure backup and geo-redundant storage.
- Leveraged **GitHub Copilot** and **Large Language Models (LLM)** to improve code efficiency, automate repetitive tasks, and enhance development speed.
- Fixed **SonarQube issues, reduced code smells, and improved code quality** as per industry standards.
- Developed and maintained **unit test cases** using **XUnit and Moq framework** to ensure robust application testing for all applications.
- Researched and implemented **AI-driven solutions** using **machine learning models** to enhance application intelligence.
- Lead moderately complex projects, coordinating with cross-functional teams.
- Provide technical guidance, coaching, and mentorship to junior developers.
- Conducted **peer code reviews** and provided feedback on best practices to enhance code maintainability.

ENVIRONMENT: Azure (Service Bus, Logic Apps, APIM, Virtual Machines), .NET Core, GitHub Copilot, Large Language Models (LLM), Identity Framework, Cloud Computing, Application Security, AI/ML, Angular, Kubernetes, Docker, Devops, Sonar Qube, REST API, Angular

Project : Opus CMC, USA

May 2021 — Aug 2022

Wipro

Azure .Net Developer

Description: Opus is one of the leading US Mortgage Due Diligence and Risk Management Service providers.

Responsibilities:

- Led migration of multiple .NET framework applications to .NET Core, reducing dependencies and improving application performance.
- Designed dynamic user interfaces using HTML, CSS, JavaScript, and Kendo UI, improving application usability.
- Developed and optimized **Azure PaaS solutions, including Web Apps, Azure Functions, and Cosmos DB** integration.
- Automating the application deployments and app integrations by containerizing them by using **Docker and Kubernetes**.
- Developed and **refactored existing React.js** components, improving maintainability and performance.
- Creating the dev and test environment for deployment and testing of applications.
- Developed **Worker Services to replace Windows Services**, improving performance and scalability.
- Enhancements of various applications in automating file transfer and report generation.
- Worked with **Angular 2.0, TypeScript, JavaScript, and jQuery** for front-end development.
- Implement responsive UI using HTML5, CSS3, and **Bootstrap**.
- Ensure front-end integration with backend APIs for seamless functionality.
- Use **Terraform and ARM templates** for infrastructure provisioning and automation.
- Automate deployments and configurations with **Ansible and PowerShell**.
- Built and optimized **Power BI dashboards** for better insights into application for performance and better business metrics.
- Designed and implemented **microservices-based architecture** to support modular and independent service deployments.

- Managed cloud cost optimization by right-sizing Azure resources and **implementing auto-scaling mechanisms**.
- Conducted code reviews and performance tuning to enhance application efficiency.
- Developed **APIs** to streamline internal workflows, improving operational efficiency.
- Used **Docker** container for the release definition to host. Build and maintain code repositories and code **migrations** using **CI/CD**.
- Implemented event-driven architecture **with Azure Service Bus, Event Grid, and Web API** for seamless data processing.
- Implemented **mocking and dependency injection** for services using **TestBed** and **HttpTestingController**.
- Used **spyOn()** and **fakeAsync()** in Jasmine to test asynchronous operations and API calls.
- Conducted **end-to-end (E2E) testing** using **Protractor** and **Cypress**, ensuring UI reliability.
- Developed **component interaction tests** using **Angular Test Harness** for better test reliability.
- Designed and maintained **RESTful APIs** with **.NET Core Web API**, ensuring security best practices using **OAuth 2.0** and **Azure AD** authentication.
- **Optimized API gateway** performance by implementing caching, rate limiting, throttling, and backend service load balancing.

ENVIRONMENT: Azure (Blob Storage, Functions, SQL Database, DevOps), .NET Core, React.js, Power BI, Docker

Project : Nestle, Switzerland

Dec 2019 — May 2021

Tech Mahindra

.Net Full stack Developer

Description: Data scientists of Nestle use this Application to donate and store various experiment values which will be useful for them to do predictions. The application consists of complex rules, DB structures and is hosted on cloud.

Responsibilities:

- Designed and developed **web applications using .NET MVC and Azure Cloud**.
- Implemented data processing and logic execution in Azure for predictive analysis by data scientists.
- Optimized **SQL Server queries and stored procedures** for improved database performance.
- Participated in production support and troubleshooting, ensuring minimal downtime and optimal system performance.
- Designed and implemented **APIs** to improve data access and application interoperability.
- Experience in developing **Azure functions** with diverse triggers like **HTTP Trigger, timer trigger, durable function, Service bus trigger, event hub trigger** and Used **Logic Apps** for automating workflows, business process and integrate systems and more.
- Good Knowledge of deploying **APIs to Azure App Services** and integrate App Service with deployed APIs. Used APIM to ensure scalability and reliability of deployed APIs.
- Wrote and maintained unit tests using **xUnit, NUnit, and MSTest** to ensure code reliability.
- Conducted integration testing using tools like **Postman** and **Moq** to validate API functionality.
- Implemented Behavior Driven Development (BDD) and Test Driven Development (TDD) methodologies.
- Created Custom controls and templates to enhance UI Functionality with in the **MVC** And **MVVM** Frameworks.
- **Coordinated** with **QA team** for unit testing and **integration testing** of different modules.

Project Name: Nestle PCIDSS (Payment Card Industry Data Security Standards)

Role: .Net developer

Description: Application deals with the registration of payment cards such as Master Card, Visa, AMEX & Discover Credit/debit cards to the nestle internal applications.

Responsibilities:

- Developed secure **payment card registrations** for Visa, Mastercard, AMEX, and Discover for payments.

- Implemented security best practices such as secure **HTTP headers**, **cross-site scripting prevention**, and **error handling**.
- Created and Consumed Services using different .NET frameworks like **Web API**, **WCF** and **web services** and performed **CRUD** operations using Web-Get, Web-Invoke.
- Conducted **security audits** to ensure compliance with industry standards.
- Designed **highly available and fault-tolerant systems**, incorporating **caching strategies** with **Redis** or **MemoryCache**.

ENVIRONMENT: Azure (App Services, APIM, SQL Database, Logic Apps), .NET Core, C#, ASP.NET MVC, JIRA, Power BI

Project Name: EMSG (Error Messaging Portal), Tech Mahindra, Switzerland

April 2018 — Nov 2019

Role: .Net full stack developer, SQL Developer

Responsibilities:

Description: Error Messaging Portal is a repository of various application errors and also consists of resolution procedures. It is developed in asp.net and have various web services.

- Worked on a team building new work orders, implementing the business logic in **C#**, **entity framework** to interact with **SQL Server Database**.
- Developed and maintained **scalable applications** using **ASP.NET Core**, **C#**, and **Angular**, ensuring high performance and security.
- Designed and implemented **RESTful APIs** and **microservices** for seamless integration with frontend applications.
- Applied **SOLID principles and design patterns** to enhance maintainability and code efficiency.
- Led **end-to-end application development**, including **UI development with Angular and JavaScript** and backend development with **ASP.NET Core and MongoDB**.
- Created new views and SQL stored procedures as per the business needs.
- Collaborated closely with **cross-functional teams**, including designers, QA engineers, and DevOps, to deliver high-quality software solutions.
- Responsible for resolving tickets or bugs with priority from 1 to 5.

Project Name: Enterprise Workflow Automation, Hyderabad, India

Aug 2016 — March 2018

Role: .Net Developer

Responsibilities:

- Developed and maintained ASP.NET MVC applications to automate internal business workflows.
- Designed and optimized SQL Server stored procedures for faster data retrieval and reporting.
- Created and integrated RESTful APIs to connect multiple enterprise applications.
- Assisted in migrating legacy applications to Azure Cloud, enhancing scalability and reliability.
- Conducted unit testing and peer code reviews to ensure code quality and maintainability.

POCS:

- Data Insights Dashboard – Developed a Power BI dashboard for real-time analytics using SQL data.
- Chat bot Assistant – Built a .NET Core chat bot using Azure Bot Services for internal support.
- Automated Report Scheduler – Created a C# script to automate report generation and email dispatch.

EDUCATION:

CMR Institute of Technology – Hyderabad India

Bachelor of Technology - Computer Science Engineering
