PROFESSIONAL EXPERIENCE

Senior Software Engineer

Luma Health

10/2022 - 12/2024 Florida, United States

- Spearheaded the development of a CRM-based Remote Patient Monitoring System, adhering to both HIPAA and FDA regulations, utilizing .NET, Python, and Angular.
- Used .NET Core to architect and implement microservices, improving application modularity, scalability, and overall performance.
- Employed comprehensive unit testing using NUnit for .NET and Jasmine for Angular, ensuring code reliability and maintainability.
- Participated in the migration on .NET Core 3.1 to .NET 8, Angular 10-16, and advanced Azure services.
- Built Angular 16 components with TypeScript for enhanced code quality and maintainability, leveraging static typing, and classes.
- Designed Server-Side Blazor applications and seamlessly integrated Angular components with .NET backend services for a dynamic and interactive user experience.
- Collaborated with cross-functional teams to troubleshoot, debug, and optimize Angular applications using advanced tools like NgRx.
- Handled a multitude of triggers in Azure Functions, including HTTP, Blob Storage, and Queue Storage, to create event-driven applications.
- Constructed CI/CD pipelines to automate and optimize the software delivery process, along with facilitating quicker releases and improving deployment consistency.
- Executed SQL database administration, optimizing performance through schema design, query tuning, and optimal use of indexes.
- Led code reviews and collaborative discussions, significantly elevating code quality and reducing production bugs.

FullStack Engineer

Smile Brands

10/2021 - 09/2022 Texas, United States

- Spearheaded the development of a comprehensive health solutions platform using ASP.NET MVC and React.
- Adhered to HIPAA guidelines, using advanced encryption, access controls, and regular audits to protect sensitive patient data and integrated the Epic EHR system to streamline patient data management.
- Developed RESTful APIs with ASP.NET MVC, implementing robust authentication with JWT and Auth0 for patient data security and single sign-on (SSO).
- Developed and optimized back-end logic using C#, leveraging abstract classes, interfaces, and object-oriented principles.
- Engineered Single Page Applications (SPA) using React.js with a focus on components, forms, routing, and animations, utilizing Redux to manage state and enhance performance.
- Enhanced the efficiency of data operations by utilizing LINQ queries with Entity Framework for data retrieval and manipulation.
- Implemented best practices for Test-Driven Development (TDD) using Jest and React Testing Library.
- Created data scraping modules with Python for enhanced data accessibility, complemented by managing SSIS packages.
- Implemented load balancing with EC2 and ECS to distribute traffic evenly across instances, enhancing application availability and fault tolerance.
- Architected a robust solution leveraging AWS S3 and CloudFront services, ensuring high availability and performance for our users.

SUMMARY

Experienced Senior Software Engineer delivering innovative solutions across e-commerce, healthcare, and financial services.

Proficient in JavaScript, TypeScript, C#, React.js, Angular, Node.js, and .NET. Skilled in leveraging cloud services like Azure and AWS.

Skilled in microservices architecture, RESTful API development, and database optimization, with a strong focus on compliance, security, and system reliability.

A collaborative team player passionate about mentoring, driving technical excellence, and solving complex business challenges through technology.

SKILLS

HTML/CSS	jQuery	C/C++	C#
.NET	ASP.NET	.NET Core	
Entity Framework	Dapper ORM		
LINQ	Blazor	Razor	JavaScript
TypeScript	Node.js	Next.js	
React	Angular	RabbitMQ	
Python	AI/ML	GenAI	MySQL
Oracle	SQLite	SQL Server	
PostgreSQL	MongoDB	T- SQL	
GraphQL	Azure	AWS	Git
DevOps	Jira	TDD	Jest
Cypress	NUnit	XUnit	Mocha
Docker	Kubernetes	Apache Kafka	
RESTful API	GraphQL	JWT	
OAuth2	Agile	Scrum	

PROFESSIONAL EXPERIENCE

Software Engineer

CenterWell

📅 01/2020 - 07/2021 📍 Texas, United States

- Developed multiple sophisticated healthcare management platform utilizing React and Angular for front-end development, along with ASP.NET Core Web API for back-end services.
- Leveraged Angular's advanced features like advanced type checking and accelerated compilations.
- Employed modern React features like Hooks and the Context API to facilitate efficient state management and modular component development.
- Expertly utilized Dapper Object-Relational Mapping (ORM) to enhance the efficiency and accuracy of database operations.
- Implemented a real-time chat feature using GraphQL subscriptions, enabling instant communication between over 100,000 monthly active patients and their assigned healthcare providers.
- Applied SQL expertise to refine and develop intricate stored procedures, enhancing both the application's performance and the efficiency of the database.
- Utilized T-SQL to optimize and construct intricate stored procedures, significantly improving database efficiency and overall application performance.
- Managed security and access control for both Azure Blob Storage and Event Hubs using Shared Access Signatures (SAS) and Azure Active Directory, ensuring data integrity and confidentiality.
- Utilized SQL Server to manage real patient data efficiently while sensitive data was securely handled with Azure Cosmos DB due to its global distribution, elastic scaling, and robust security capabilities.

Software Developer

PAM Health

📅 10/2017 - 10/2019 📍 Texas, United States

- Integrated ASP.NET MVC to manage components of the healthcare application, such as business logic for medical billing, insurance claims processing, and electronic prescribing.
- Designed and developed dynamic, user-centric websites using HTML, CSS, JavaScript, jQuery, and AJAX, leading to a surge in user engagement and customer satisfaction.
- Partnered with the design team to translate design ideas into functional web pages using HTML and CSS.
- Employed jQuery to develop interactive features and enhance website responsiveness, amplifying user interaction and engagement.
- Implemented robust validation on web forms using .NET Validation Controls and Angular 11, ensuring data integrity and seamless user interactions.
- Utilized Angular's dependency injection functionality to craft modular, reusable, and testable code.
- Implemented AJAX for smooth and efficient communication with backend servers, leading to quicker page loads and an enhanced user experience.
- Collaborated with cross-functional teams to understand user requirements and translate them into robust software solutions.
- Leveraged React's virtual DOM feature for efficient updates and rendering, substantially boosting application performance.
- Collaborate with stakeholders to gather and define requirements, ensuring alignment with healthcare standards and regulations.

EDUCATION

Bachelor's Degree in Computer Science

Baylor University

📅 09/2015 - 09/2019

KEY ACHIEVEMENTS

Healthcare Management Platform

Played an instrumental role in the development of HIPAA complaint platforms.

Reduced Bug Rates

Introduced robust testing protocols that led to a 30% reduction in software bugs, contributing to improved user experience and satisfaction.
